| #  | ARTICLE                                                                                                                                                                                                            | IF  | CITATIONS |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 1  | Recent Advances in Our Understanding of the Infectious Entry Pathway of Human Papillomavirus Type 16. <i>Microorganisms</i> , 2021, 9, 2076.                                                                       | 3.6 | 7         |
| 2  | A new cell culture model to genetically dissect the complete human papillomavirus life cycle. <i>PLoS Pathogens</i> , 2018, 14, e1006846.                                                                          | 4.7 | 48        |
| 3  | Human Papillomavirus Major Capsid Protein L1 Remains Associated with the Incoming Viral Genome throughout the Entry Process. <i>Journal of Virology</i> , 2017, 91, .                                              | 3.4 | 45        |
| 4  | Incoming human papillomavirus 16 genome is lost in PML protein-deficient HaCaT keratinocytes. <i>Cellular Microbiology</i> , 2017, 19, e12708.                                                                     | 2.1 | 26        |
| 5  | Incoming human papillomavirus type 16 genome resides in a vesicular compartment throughout mitosis. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2016, 113, 6289-6294. | 7.1 | 81        |
| 6  | Topography of the Human Papillomavirus Minor Capsid Protein L2 during Vesicular Trafficking of Infectious Entry. <i>Journal of Virology</i> , 2015, 89, 10442-10452.                                               | 3.4 | 56        |
| 7  | Mepriin Metalloproteases Inactivate Interleukin 6. <i>Journal of Biological Chemistry</i> , 2014, 289, 7580-7588.                                                                                                  | 3.4 | 36        |
| 8  | Pericellular Proteolysis. , 2011, , 75-94.                                                                                                                                                                         |     | 0         |
| 9  | Protein Stability and Surface Electrostatics: A Charged Relationship. <i>Biochemistry</i> , 2006, 45, 2761-2766.                                                                                                   | 2.5 | 285       |
| 10 | Amino acid substitutions affecting protein dynamics in eglin C do not affect heat capacity change upon unfolding. <i>Proteins: Structure, Function and Bioinformatics</i> , 2006, 64, 295-300.                     | 2.6 | 4         |
