#	ARTICLE	IF	CITATIONS
1	Combination of selective area sublimation of p-GaN and regrowth of AlGaIn for the co-integration of enhancement mode and depletion mode high electron mobility transistors. <i>Solid-State Electronics</i> , 2022, 188, 108210.	0.8	5
2	Les nouvelles diodes électroluminescentes pour l'émission UV. , 2022, , 16-21.	0.1	0
3	Influence of surface roughness on the lasing characteristics of optically pumped thin-film GaN microdisks. <i>Optics Letters</i> , 2022, 47, 1521.	1.7	7
4	Light Polarization in Tunnel Junction Injected UV Light-Emitting Diodes. <i>Physica Status Solidi (A) Applications and Materials Science</i> , 2022, 219, 2200055.	0.8	0
5	Porous Nitride Light-Emitting Diodes. <i>ACS Photonics</i> , 2022, 9, 1256-1263.	3.2	5
6	Selective sublimation of GaN and regrowth of AlGaIn to co-integrate enhancement mode and depletion mode high electron mobility transistors. <i>Journal of Crystal Growth</i> , 2022, , 126779.	0.7	0
7	Comparison of lasing characteristics of GaN microdisks with different structures. <i>Journal Physics D: Applied Physics</i> , 2022, 55, 355107.	1.3	2
8	Preferential sublimation along threading dislocations in InGaIn/GaN single quantum well for improved photoluminescence. <i>Journal of Applied Physics</i> , 2022, 132, 035302.	1.1	1
9	Complexity of the dipolar exciton Mott transition in GaN/(AlGa)N nanostructures. <i>Physical Review B</i> , 2021, 103, .	1.1	7
10	Employing Cathodoluminescence for Nanothermometry and Thermal Transport Measurements in Semiconductor Nanowires. <i>ACS Nano</i> , 2021, 15, 11385-11395.	7.3	13
11	Broadband decoupling of intensity and polarization with vectorial Fourier metasurfaces. <i>Nature Communications</i> , 2021, 12, 3631.	5.8	50
12	Whispering-gallery mode InGaIn microdisks on GaN substrates. <i>Optics Express</i> , 2021, 29, 21280.	1.7	6
13	Mapping of the electrostatic potentials in MOCVD and hybrid GaN tunnel junctions for InGaIn/GaN blue emitting light emitting diodes by off-axis electron holography correlated with structural, chemical, and optoelectronic characterization. <i>Journal of Applied Physics</i> , 2021, 130, .	1.1	4
14	Bandwidth-unlimited polarization-maintaining metasurfaces. <i>Science Advances</i> , 2021, 7, .	4.7	52
15	Selective GaN sublimation and local area regrowth for co-integration of enhancement mode and depletion mode Al(Ga)N/GaN high electron mobility transistors. <i>Semiconductor Science and Technology</i> , 2021, 36, 024001.	1.0	3
16	Full InGaIn red light emitting diodes. <i>Journal of Applied Physics</i> , 2020, 128, .	1.1	55
17	Cathodoluminescence and electrical study of vertical GaN-on-GaN Schottky diodes with dislocation clusters. <i>Journal of Crystal Growth</i> , 2020, 552, 125911.	0.7	4
18	Blue to yellow emission from (Ga,In)/GaN quantum wells grown on pixelated silicon substrate. <i>Scientific Reports</i> , 2020, 10, 18919.	1.6	1

#	ARTICLE	IF	CITATIONS
19	Analysis of low-threshold optically pumped III-nitride microdisk lasers. Applied Physics Letters, 2020, 117, .	1.5	14
20	High temperature electrical transport properties of MBE-grown Mg-doped GaN and AlGaIn materials. Journal of Applied Physics, 2020, 128, .	1.1	5
21	Effect of AlGaIn interlayer on the GaN/InGaIn/GaN/AlGaIn multi-quantum wells structural properties toward red light emission. Journal of Applied Physics, 2020, 128, .	1.1	10
22	Wetting-Layer-Free AlGaIn Quantum Dots for Ultraviolet Emitters. ACS Applied Nano Materials, 2020, 3, 4054-4060.	2.4	0
23	Lasing up to 380â€‰%K in a sublimated GaN nanowire. Applied Physics Letters, 2020, 116, .	1.5	13
24	Ptychography retrieval of fully polarized holograms from geometric-phase metasurfaces. Nature Communications, 2020, 11, 2651.	5.8	136
25	Multi-microscopy nanoscale characterization of the doping profile in a hybrid Mg/Ge-doped tunnel junction. Nanotechnology, 2020, 31, 465706.	1.3	6
26	InGaIn islands and thin films grown on epitaxial graphene. Nanotechnology, 2020, 31, 405601.	1.3	3
27	Influence of the reactor environment on the selective area thermal etching of GaN nanohole arrays. Scientific Reports, 2020, 10, 5642.	1.6	7
28	Monolithic integration of ultraviolet microdisk lasers into photonic circuits in a III-nitride-on-silicon platform. Optics Letters, 2020, 45, 4276.	1.7	13
29	Printing polarization and phase at the optical diffraction limit: near- and far-field optical encryption. Nanophotonics, 2020, 10, 697-704.	2.9	19
30	Revealing topological phase in Pancharatnamâ€‰Berry metasurfaces using mesoscopic electrodynamics. Nanophotonics, 2020, 9, 4711-4718.	2.9	7
31	Trapping Dipolar Exciton Fluids in GaN/(AlGa)N Nanostructures. Nano Letters, 2019, 19, 4911-4918.	4.5	9
32	Pendeo-epitaxy of GaN on SOI nano-pillars: Freestanding and relaxed GaN platelets on silicon with a reduced dislocation density. Journal of Crystal Growth, 2019, 526, 125235.	0.7	4
33	(Ga,In)N/GaN light emitting diodes with a tunnel junction and a rough n-contact layer grown by metalorganic chemical vapor deposition. AIP Advances, 2019, 9, 055101.	0.6	10
34	An Etchingâ€‰Free Approach Toward Largeâ€‰Scale Lightâ€‰Emitting Metasurfaces. Advanced Optical Materials, 2019, 7, 1801271.	3.6	37
35	Top-down fabrication of GaN nano-laser arrays by displacement Talbot lithography and selective area sublimation. Applied Physics Express, 2019, 12, 045007.	1.1	21
36	Subliming GaN into Ordered Nanowire Arrays for Ultraviolet and Visible Nanophotonics. ACS Photonics, 2019, 6, 3321-3330.	3.2	17

#	ARTICLE	IF	CITATIONS
37	Displacement Talbot lithography for nano-engineering of III-nitride materials. <i>Microsystems and Nanoengineering</i> , 2019, 5, 52.	3.4	33
38	Internal quantum efficiencies of AlGaIn quantum dots grown by molecular beam epitaxy and emitting in the UVA to UVC ranges. <i>Journal of Applied Physics</i> , 2019, 126, .	1.1	17
39	Ge doped GaN and Al <sub>0.5</sub> Ga <sub>0.5</sub> N-based tunnel junctions on top of visible and UV light emitting diodes. <i>Journal of Applied Physics</i> , 2019, 126, .	1.1	24
40	Demonstration of critical coupling in an active III-nitride microdisk photonic circuit on silicon. <i>Scientific Reports</i> , 2019, 9, 18095.	1.6	11
41	III-nitride on silicon electrically injected microrings for nanophotonic circuits. <i>Optics Express</i> , 2019, 27, 11800.	1.7	20
42	Semiconductors Meta-Optics: Fabrication and Applications. , 2019, , .		0
43	Towards III-nitride on silicon active photonic circuits. , 2019, , .		0
44	Photoluminescence properties of (Al,Ga)N nanostructures grown on Al <sub>0.5</sub> Ga <sub>0.5</sub> N (0001). <i>Superlattices and Microstructures</i> , 2018, 114, 161-168.	1.4	6
45	Mesoporous GaN Made by Selective Area Sublimation for Efficient Light Emission on Si Substrate. <i>Physica Status Solidi (B): Basic Research</i> , 2018, 255, 1700392.	0.7	6
46	Crack Statistics and Stress Analysis of Thick GaN on Patterned Silicon Substrate. <i>Physica Status Solidi (B): Basic Research</i> , 2018, 255, 1700399.	0.7	3
47	Internal quantum efficiency in polar and semipolar (111̄) In <sub>x</sub> Ga <sub>1-x</sub> N/In <sub>y</sub> Ga <sub>1-y</sub> N quantum wells emitting from blue to red. <i>Superlattices and Microstructures</i> , 2018, 113, 129-134.	1.4	3
48	AlGaIn/GaN/AlGaIn DH̄EMTs Grown on a Patterned Silicon Substrate. <i>Physica Status Solidi (A) Applications and Materials Science</i> , 2018, 215, 1700642.	0.8	6
49	Enhanced excitonic emission efficiency in porous GaN. <i>Scientific Reports</i> , 2018, 8, 15767.	1.6	12
50	UVA and UVB light emitting diodes with Al <sub>x</sub> Ga <sub>1-x</sub> N quantum dot active regions covering the 305–335 nm range. <i>Semiconductor Science and Technology</i> , 2018, 33, 075007.	1.0	7
51	Optical and Thermal Performances of (Ga,In)N/GaN Light Emitting Diodes Transferred on a Flexible Tape. <i>IEEE Photonics Technology Letters</i> , 2018, 30, 1567-1570.	1.3	4
52	Blue Microlasers Integrated on a Photonic Platform on Silicon. <i>ACS Photonics</i> , 2018, 5, 3643-3648.	3.2	32
53	Internal quantum efficiency and Auger recombination in green, yellow and red InGaIn-based light emitters grown along the polar direction. <i>Superlattices and Microstructures</i> , 2017, 103, 245-251.	1.4	23
54	Optical properties of In <sub>x</sub> Ga <sub>1-x</sub> N/GaN quantum-disks obtained by selective area sublimation. <i>Journal of Crystal Growth</i> , 2017, 477, 262-266.	0.7	10

#	ARTICLE	IF	CITATIONS
55	Effect of the growth temperature and nitrogen precursor on the structural and electrical transport properties of SmN thin films. <i>MRS Advances</i> , 2017, 2, 165-171.	0.5	1
56	High Temperature Annealing of MBE-grown Mg-doped GaN. <i>Journal of Physics: Conference Series</i> , 2017, 864, 012018.	0.3	2
57	The microstructure, local indium composition and photoluminescence in green-emitting InGaN/GaN quantum wells. <i>Journal of Microscopy</i> , 2017, 268, 305-312.	0.8	3
58	Photo-induced droop in blue to red light emitting InGaN/GaN single quantum wells structures. <i>Journal of Applied Physics</i> , 2017, 122, .	1.1	17
59	Epitaxial GdN/SmN-based superlattices grown by molecular beam epitaxy. <i>MRS Advances</i> , 2017, 2, 189-194.	0.5	1
60	Influence of the heterostructure design on the optical properties of GaN and Al <sub>0.1</sub> Ga <sub>0.9</sub> N quantum dots for ultraviolet emission. <i>Journal of Applied Physics</i> , 2017, 122, .	1.1	14
61	Photoluminescence properties of porous GaN and (Ga,In)N/GaN single quantum well made by selective area sublimation. <i>Optics Express</i> , 2017, 25, 33243.	1.7	15
62	Investigation of Al <sub>y</sub> Ga <sub>1-y</sub> N/Al <sub>0.5</sub> Ga <sub>0.5</sub> N quantum dot properties for the design of ultraviolet emitters. <i>Japanese Journal of Applied Physics</i> , 2016, 55, 05FG06.	0.8	13
63	III-Nitride-on-silicon microdisk lasers from the blue to the deep ultra-violet. <i>Applied Physics Letters</i> , 2016, 109, .	1.5	38
64	Auger effect in yellow light emitters based on InGaN/AlGaIn/GaN quantum wells. <i>Japanese Journal of Applied Physics</i> , 2016, 55, 05FG10.	0.8	7
65	AlN interlayer to improve the epitaxial growth of SmN on GaN (0001). <i>Journal of Crystal Growth</i> , 2016, 450, 22-27.	0.7	5
66	High temperature electrical transport study of Si-doped AlN. <i>Superlattices and Microstructures</i> , 2016, 98, 253-258.	1.4	10
67	Temperature-Induced Four-Fold-on-Six-Fold Symmetric Heteroepitaxy, Rocksalt SmN on Hexagonal AlN. <i>Crystal Growth and Design</i> , 2016, 16, 6454-6460.	1.4	7
68	Impact of the Bending on the Electroluminescence of Flexible InGaN/GaN Light-Emitting Diodes. <i>IEEE Photonics Technology Letters</i> , 2016, 28, 1661-1664.	1.3	6
69	First Power Performance Demonstration of Flexible AlGaIn/GaN High Electron Mobility Transistor. <i>IEEE Electron Device Letters</i> , 2016, 37, 553-555.	2.2	24
70	Selective Area Sublimation: A Simple Top-down Route for GaN-Based Nanowire Fabrication. <i>Nano Letters</i> , 2016, 16, 1863-1868.	4.5	48
71	Ultraviolet light emitting diodes using III-N quantum dots. <i>Materials Science in Semiconductor Processing</i> , 2016, 55, 95-101.	1.9	13
72	Optimized In composition and quantum well thickness for yellow-emitting (Ga,In)N/GaN multiple quantum wells. <i>Journal of Crystal Growth</i> , 2016, 434, 25-29.	0.7	6

#	ARTICLE	IF	CITATIONS
73	GaN films and GaN/AlGaIn quantum wells grown by plasma assisted molecular beam epitaxy using a high density radical source. Journal of Crystal Growth, 2016, 433, 165-171.	0.7	6
74	Growth of nitride-based light emitting diodes with a high-reflectivity distributed Bragg reflector on mesa-patterned silicon substrate. Physica Status Solidi (A) Applications and Materials Science, 2015, 212, 2297-2301.	0.8	9
75	Formation of GaN quantum dots by molecular beam epitaxy using NH <sub>3</sub> as nitrogen source. Journal of Applied Physics, 2015, 118, .	1.1	29
76	Optical properties and structural investigations of (11-22)-oriented GaN/Al <sub>0.5</sub> Ga <sub>0.5</sub> N quantum wells grown by molecular beam epitaxy. Journal of Applied Physics, 2015, 118, 024303.	1.1	2
77	Internal quantum efficiency in yellow-amber light emitting AlGaIn-GaN heterostructures. Applied Physics Letters, 2015, 107, .	1.5	36
78	Optical properties of small GaN-Al <sub>0.5</sub> Ga <sub>0.5</sub> N quantum dots grown on (11-22) GaN templates. , 2015, , .		0
79	III-Nitride quantum dot based light emitting diodes for UV emission. , 2015, , .		0
80	Optical properties of Al <sub>0.5</sub> Ga <sub>0.5</sub> N/GaN polar quantum dots and UV LEDs made of them. , 2015, , .		0
81	Highly resistive epitaxial Mg-doped GaN thin films. Applied Physics Letters, 2015, 106, .	1.5	18
82	Photoluminescence behavior of amber light emitting GaInN-GaN heterostructures. Proceedings of SPIE, 2015, , .	0.8	0
83	Strain-compensated (Ga,In)N/(Al,Ga)N/GaN multiple quantum wells for improved yellow/amber light emission. Applied Physics Letters, 2015, 106, .	1.5	45
84	Yellow-red emission from (Ga,In)N heterostructures. Journal Physics D: Applied Physics, 2015, 48, 403001.	1.3	78
85	Polar and semipolar GaN/Al <sub>0.5</sub> Ga <sub>0.5</sub> N nanostructures for UV light emitters. Semiconductor Science and Technology, 2014, 29, 084001.	1.0	30
86	AlGaIn/GaN Nanostructures for UV Light Emitting Diodes. , 2014, , .		1
87	GaN-based heterostructures grown on ZnO substrates: from polarity control to the fabrication of blue LEDs. , 2014, , .		0
88	Stark effect in ensembles of polar (0001) Al <sub>0.5</sub> Ga <sub>0.5</sub> N/GaN quantum dots and comparison with semipolar (11-22) ones. Journal of Applied Physics, 2014, 116, 034308.	1.1	15
89	Growth of GaN nanostructures with polar and semipolar orientations for the fabrication of UV LEDs. , 2014, , .		1
90	Capping green emitting (Ga,In)N quantum wells with (Al,Ga)N: impact on structural and optical properties. Semiconductor Science and Technology, 2014, 29, 035016.	1.0	9

#	ARTICLE	IF	CITATIONS
91	Monolithic white light emitting diodes using a (Ga,In)N-based light converter. , 2014, , .		1
92	The universal photoluminescence behaviour of yellow light emitting (Ga,In)N/GaN heterostructures. Superlattices and Microstructures, 2014, 76, 9-15.	1.4	8
93	Molecular beam epitaxy of ferromagnetic epitaxial GdN thin films. Journal of Crystal Growth, 2014, 404, 146-151.	0.7	18
94	Ultra-violet GaN/Al <sub>0.5</sub> Ga <sub>0.5</sub> N quantum dot based light emitting diodes. Journal of Crystal Growth, 2013, 363, 282-286.	0.7	44
95	Dependence of the Mg-related acceptor ionization energy with the acceptor concentration in p-type GaN layers grown by molecular beam epitaxy. Applied Physics Letters, 2013, 103, .	1.5	96
96	Excitons in nitride heterostructures: From zero- to one-dimensional behavior. Physical Review B, 2013, 88, .	1.1	50
97	Stress distribution of 12 $\mu$ m thick crack free continuous GaN on patterned Si(110) substrate. Physica Status Solidi C: Current Topics in Solid State Physics, 2013, 10, 425-428.	0.8	12
98	GaN doped with beryllium—An effective light converter for white light emitting diodes. Applied Physics Letters, 2013, 103, .	1.5	23
99	Imaging and counting threading dislocations in c-oriented epitaxial GaN layers. Semiconductor Science and Technology, 2013, 28, 035006.	1.0	32
100	AlGaIn/GaN HEMTs with an InGaIn back—barrier grown by ammonia—assisted molecular beam epitaxy. Physica Status Solidi (A) Applications and Materials Science, 2013, 210, 480-483.	0.8	11
101	Built-in electric field and radiative efficiency of polar (0001) and semipolar (11—22) Al <sub>0.5</sub> Ga <sub>0.5</sub> N—GaIn quantum dots. , 2013, , .		1
102	Measurement of the effect of plasmon gas oscillation on the dielectric properties of p- and n-doped Al <sub>x</sub> Ga <sub>1-x</sub> N films using infrared spectroscopy. Journal of Applied Physics, 2013, 114, 053505.	1.1	10
103	Built-in electric field in ZnO based semipolar quantum wells grown on (101—2) ZnO substrates. Applied Physics Letters, 2013, 103, .	1.5	11
104	Role of magnetic polarons in ferromagnetic GdN. Physical Review B, 2013, 87, .	1.1	40
105	Metal Organic Vapor Phase Epitaxy of Monolithic Two-Color Light-Emitting Diodes Using an InGaIn-Based Light Converter. Applied Physics Express, 2013, 6, 092105.	1.1	14
106	Blue Light-Emitting Diodes Grown on ZnO Substrates. Applied Physics Express, 2013, 6, 042101.	1.1	14
107	AlGaIn-Based Light Emitting Diodes Using Self-Assembled GaN Quantum Dots for Ultraviolet Emission. Japanese Journal of Applied Physics, 2013, 52, 08JG01.	0.8	16
108	Current transport through an n—doped, nearly lattice matched GaN/AlInN/GaN heterostructure. Physica Status Solidi C: Current Topics in Solid State Physics, 2012, 9, 931-933.	0.8	3

#	ARTICLE	IF	CITATIONS
109	Growth optimization and characterization of lattice-matched Al <sub>0.82</sub> In <sub>0.18</sub> N optical confinement layer for edge emitting nitride laser diodes. <i>Journal of Crystal Growth</i> , 2012, 338, 20-29.	0.7	10
110	Color control in monolithic white light emitting diodes using a (Ga,In)N/GaN multiple quantum well light converter. <i>Physica Status Solidi (A) Applications and Materials Science</i> , 2012, 209, 465-468.	0.8	5
111	Control of polarized emission from selectively etched GaN/AlN quantum dot ensembles on Si(111). <i>Physica Status Solidi C: Current Topics in Solid State Physics</i> , 2012, 9, 1011-1015.	0.8	0
112	GaN/Al <sub>0.5</sub> Ga <sub>0.5</sub> N (11-22) semipolar nanostructures: A way to get high luminescence efficiency in the near ultraviolet range. <i>Journal of Applied Physics</i> , 2011, 110, .	1.1	23
113	Selective control of polarized emission from patterned GaN/AlN quantum dot ensembles on Si(111). <i>Applied Physics Letters</i> , 2011, 98, 061903.	1.5	4
114	Study of the growth mechanisms of GaN/(Al, Ga)N quantum dots: Correlation between structural and optical properties. <i>Journal of Applied Physics</i> , 2011, 109, 053514.	1.1	11
115	Excitation-dependent Polarized Emission from GaN/AlN Quantum Dot Ensembles under In-plane Uniaxial Stresses. <i>AIP Conference Proceedings</i> , 2011, , .	0.3	1
116	Polarized light from excitonic recombination in selectively etched GaN/AlN quantum dot ensembles on Si(111). <i>Journal Physics D: Applied Physics</i> , 2011, 44, 505101.	1.3	5
117	Growth of GaN based structures on Si(110) by molecular beam epitaxy. <i>Journal of Crystal Growth</i> , 2010, 312, 2683-2688.	0.7	25
118	Current Spreading Efficiency and Fermi Level Pinning in GaInNAs/GaAs Quantum-Well Laser Diodes. <i>IEEE Journal of Quantum Electronics</i> , 2010, 46, 1058-1065.	1.0	3
119	Asymmetric barrier composition GaN/(Ga,In)N/(Al,Ga)N quantum wells for yellow emission. <i>Physica Status Solidi C: Current Topics in Solid State Physics</i> , 2010, 7, 2130-2132.	0.8	1
120	Blue-green and white color tuning of monolithic light emitting diodes. <i>Journal of Applied Physics</i> , 2010, 108, 073115.	1.1	47
121	External efficiency and carrier loss mechanisms in InAs/GaInNAs quantum dot light-emitting diodes. <i>Journal of Applied Physics</i> , 2010, 108, 033104.	1.1	1
122	Polarized emission from GaN/AlN quantum dots subject to uniaxial thermal interfacial stresses. <i>Journal of Vacuum Science and Technology B: Nanotechnology and Microelectronics</i> , 2010, 28, C5E25-C5E34.	0.6	5
123	Electronic and optical properties of GaN/AlN quantum dots on Si(111) subject to in-plane uniaxial stresses and variable excitation. <i>Journal of Applied Physics</i> , 2010, 108, 083510.	1.1	6
124	Optical and Structural Properties of an Eu Implanted Gallium Nitride Quantum Dots/Aluminium Nitride Superlattice. <i>Journal of Nanoscience and Nanotechnology</i> , 2010, 10, 2473-2478.	0.9	3
125	Infrared detectors based on InGaAsN/GaAs intersubband transitions. <i>Applied Physics Letters</i> , 2009, 94, 022103.	1.5	4
126	Tailoring the shape of GaN/Al <sub>x</sub> Ga <sub>1-x</sub> N nanostructures to extend their luminescence in the visible range. <i>Journal of Applied Physics</i> , 2009, 105, 033519.	1.1	30

#	ARTICLE	IF	CITATIONS
127	GaN/Al <sub>0.5</sub> Ga <sub>0.5</sub> N quantum dots and quantum dashes. Physica Status Solidi (B): Basic Research, 2009, 246, 842-845.	0.7	2
128	AlGaIn/GaN high electron mobility transistor grown by molecular beam epitaxy on Si(110): comparisons with Si(111) and Si(001). Physica Status Solidi C: Current Topics in Solid State Physics, 2009, 6, S1020.	0.8	13
129	Perturbing GaN/AlN quantum dots with uniaxial stressors. Physica Status Solidi C: Current Topics in Solid State Physics, 2009, 6, 1432-1435.	0.8	4
130	Electroluminescence analysis of 1.3-1.5 $\mu$ m InAs quantum dot LEDs with (Ga,In)(N,As) capping layers. Physica Status Solidi C: Current Topics in Solid State Physics, 2009, 6, 1424-1427.	0.8	1
131	Signature of monolayer and bilayer fluctuations in the width of (Al,Ga)N/GaN quantum wells. Physical Review B, 2009, 79, .	1.1	9
