#	ARTICLE	IF	CITATIONS
1	The Adiabatic Correction Factor for Deformation Heating During the Uniaxial Compression Test. Journal of Materials Engineering and Performance, 2001, 10, 710-717.	1.2	281
2	Magnetic and vibrational properties of high-entropy alloys. Journal of Applied Physics, 2011, 109, .	1.1	223
3	Absence of long-range chemical ordering in equimolar FeCoCrNi. Applied Physics Letters, 2012, 100, .	1.5	176
4	The thermomechanical processing of alpha/beta titanium alloys. Jom, 1997, 49, 33-39.	0.9	151
5	Self-consistent modeling of the flow behavior of wrought alpha/beta titanium alloys under isothermal and nonisothermal hot-working conditions. Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science, 2002, 33, 2719-2727.	1.1	113
6	Dynamic-coarsening behavior of an α/β^2 titanium alloy. Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science, 2006, 37, 1125-1136.	1.1	88
7	Thermomagnetic analysis of FeCoCrNi alloys: Magnetic entropy of high-entropy alloys. Journal of Applied Physics, 2013, 113, .	1.1	88
8	Alpha/Beta Heat Treatment of a Titanium Alloy with a Nonuniform Microstructure. Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science, 2007, 38, 910-921.	1.1	77
9	Plastic Flow and Microstructure Evolution during Thermomechanical Processing of a PM Nickel-Base Superalloy. Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science, 2013, 44, 2778-2798.	1.1	54
10	An Investigation of High-Temperature Precipitation in Powder-Metallurgy, Gamma/Gamma-Prime Nickel-Base Superalloys. Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science, 2015, 46, 1715-1730.	1.1	46
11	Dynamic transformation of Ti-6Al-4V during torsion in the two-phase region. Journal of Materials Science, 2018, 53, 9305-9315.	1.7	31
12	Modeling of the consolidation of continuous-fiber metal matrix composites via foil-fiber-foil techniques. Journal of Materials Engineering and Performance, 1993, 2, 333-340.	1.2	29
13	Opposing and Driving Forces Associated with the Dynamic Transformation of Ti-6Al-4V. Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science, 2018, 49, 1450-1454.	1.1	27
14	Effect of Process Variables on the Inertia Friction Welding of Superalloys LSHR and Mar-M247. Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science, 2016, 47, 3981-4000.	1.1	22
15	Engineering the Activity and Lifetime of Heterogeneous Catalysts for Carbon Nanotube Growth via Substrate Ion Beam Bombardment. Nano Letters, 2014, 14, 4997-5003.	4.5	19
16	Induction tempering of steel: Part I. Development of an effective tempering parameter. Journal of Heat Treating, 1985, 4, 39-46.	0.1	16
17	The Effect of Cooling Rate on High-Temperature Precipitation in a Powder-Metallurgy, Gamma/Gamma-Prime Nickel-Base Superalloy. Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science, 2018, 49, 6265-6276.	1.1	16
18	Effect of the size distribution of alpha particles on microstructure evolution during heat treatment of an alpha/beta titanium alloy. Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science, 2005, 36, 259-262.	1.1	14

#	ARTICLE	IF	CITATIONS
19	Site-Dependent Tension Properties of Inertia Friction-Welded Joints Made From Dissimilar Ni-based Superalloys. <i>Journal of Materials Engineering and Performance</i> , 2015, 24, 1173-1184.	1.2	13
20	A comparison of the precipitation behavior in PM γ - γ' nickel-base superalloys. <i>Materials at High Temperatures</i> , 2016, 33, 301-309.	0.5	11
21	Efficiency of the Inertia Friction Welding Process and Its Dependence on Process Parameters. <i>Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science</i> , 2017, 48, 3328-3342.	1.1	11
22	The Forging of Metals. <i>Scientific American</i> , 1981, 245, 98-106.	1.0	8
23	Effect of Preheating on the Inertia Friction Welding of the Dissimilar Superalloys Mar-M247 and LSHR. <i>Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science</i> , 2016, 47, 6121-6137.	1.1	8
24	Alloying-Element Loss During High-Temperature Processing of a Nickel-Base Superalloy. <i>Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science</i> , 2014, 45, 962-979.	1.1	7
25	A Comparison of the Inertia Friction Welding Behavior of Similar and Dissimilar Ni-Based Superalloys. <i>Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science</i> , 2018, 49, 5428-5444.	1.1	7
26	Transient behaviour of torque and process efficiency during inertia friction welding. <i>Science and Technology of Welding and Joining</i> , 2019, 24, 136-147.	1.5	7
27	An Investigation of Tertiary γ' Precipitation in a Powder-Metallurgy, γ - γ' Nickel-Base Superalloy. <i>Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science</i> , 2019, 50, 5281-5296.	1.1	7
28	High-Temperature Static Coarsening of Gamma-Prime Precipitates in NiAlCr-X Single Crystals. <i>Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science</i> , 2019, 50, 2289-2301.	1.1	7
29	Precipitation in powder-metallurgy, nickel-base superalloys: review of modeling approach and formulation of engineering methods to determine input data. <i>Integrating Materials and Manufacturing Innovation</i> , 2016, 5, 41-60.	1.2	6
30	A Comparison of the Plastic-Flow Response of a Powder-Metallurgy Nickel-Base Superalloy Under Nominally-Isothermal and Transient-Heating Hot-Working Conditions. <i>Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science</i> , 2017, 48, 1864-1879.	1.1	6
31	Consolidation of Continuous Fiber, Intermetallic-Matrix Composites. <i>Materials Research Society Symposia Proceedings</i> , 1992, 273, 351.	0.1	5
32	Fiber fracture during processing of continuous fiber, metal-matrix composites using the foil/fiber/foil technique. <i>Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science</i> , 1995, 26, 1129-1139.	1.1	5
33	Plastic Flow During Hot Working of Ti-7Al. <i>Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science</i> , 2020, 51, 4695-4710.	1.1	5
34	Induction tempering of steel: Part II. Effect of process variables. <i>Journal of Heat Treating</i> , 1985, 4, 47-55.	0.1	4
35	The Application of Differential Scanning Calorimetry to Investigate Precipitation Behavior in Nickel-Base Superalloys Under Continuous Cooling and Heating Conditions. <i>Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science</i> , 2021, 52, 3706-3726.	1.1	4
36	The Constant-Stress, Constant-Heating-Rate Test: A Novel Method for Characterizing Transient Mechanical Behavior of Metallic Materials. <i>Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science</i> , 2022, 53, 394-406.	1.1	3

#	ARTICLE	IF	CITATIONS
37	Effect of process parameter variability on HIP consolidation of continuous-fiber, metal-matrix composites made from foil/fiber/foil layups. Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science, 1995, 26, 1906-1908.	1.1	2
38	An experimental and theoretical investigation of the rapid consolidation of continuously reinforced, metal-matrix Composites. Metallurgical and Materials Transactions A: Physical Metallurgy and Materials Science, 1996, 27, 1719-1730.	1.1	2
39	Engineering catalytic activity via ion beam bombardment of catalyst supports for vertically aligned carbon nanotube growth. , 2015, , .		0
