#	ARTICLE	IF	CITATIONS
1	Homogenization assumptions for coupled multiscale analysis of structural elements: beam kinematics. <i>Computational Mechanics</i> , 2020, 65, 635-661.	4.0	15
2	An advanced shell model for the analysis of geometrical and material nonlinear shells. <i>Computational Mechanics</i> , 2020, 66, 1353-1376.	4.0	7
3	On an improved 3D stress analysis for elastic composite shells. <i>Computers and Structures</i> , 2020, 231, 106172.	4.4	2
4	An improved quadrilateral shell element based on the Huâ€“Washizu functional. <i>Advanced Modeling and Simulation in Engineering Sciences</i> , 2020, 7, .	1.7	9
5	A first order homogenization approach for structural elements: Beam kinematics. <i>Proceedings in Applied Mathematics and Mechanics</i> , 2019, 19, e201900181.	0.2	0
6	On boundary conditions and constraints for representative volume elements of a twoâ€“scale shell formulation. <i>Proceedings in Applied Mathematics and Mechanics</i> , 2019, 19, e201900123.	0.2	1
7	A shell element for the prediction of residual load carrying capacities due to delamination. <i>International Journal for Numerical Methods in Engineering</i> , 2018, 118, 132.	2.8	5
8	Evolution of Failure Mechanisms in Composite Shell Structures Using Different Models. <i>Lecture Notes in Applied and Computational Mechanics</i> , 2018, , 3-21.	2.2	0
9	Theory and numerics of layered shells with variationally embedded interlaminar stresses. <i>Computer Methods in Applied Mechanics and Engineering</i> , 2017, 326, 713-738.	6.6	15
10	Shear correction factors for layered plates and shells. <i>Computational Mechanics</i> , 2017, 59, 129-146.	4.0	23
11	A layered shell element for the computation of interlaminar shear stresses and thickness normal stresses. <i>Proceedings in Applied Mathematics and Mechanics</i> , 2017, 17, 323-324.	0.2	1
12	Comparison between substructure and FE2 modeling of beam-like structures. <i>Proceedings in Applied Mathematics and Mechanics</i> , 2017, 17, 321-322.	0.2	0
13	Nonlinear two-scale shell modeling of sandwiches with a comb-like core. <i>Composite Structures</i> , 2016, 144, 147-155.	5.8	15
14	A coupled globalâ€“local shell model with continuous interlaminar shear stresses. <i>Computational Mechanics</i> , 2016, 57, 237-255.	4.0	10
15	Ein neues FE-Modell zur Berechnung von geschichteten Platten mit kontinuierlichen interlaminaren Schubspannungen/A new FEâ€“model for the computation of layered plates with continuous interlaminar transverse shear stresses. <i>Bauingenieur</i> , 2016, 91, 179-187.	0.1	0
16	A coupled two-scale shell model for comb-like sandwich structures. <i>Proceedings in Applied Mathematics and Mechanics</i> , 2015, 15, 451-452.	0.2	0
17	Multi-scale modeling of beam-like structures: A new boundary condition concept for the RVE. <i>Proceedings in Applied Mathematics and Mechanics</i> , 2015, 15, 455-456.	0.2	0
18	A three-dimensional progressive damage model for fiber reinforced composites with an implicit-explicit integration scheme. <i>Proceedings in Applied Mathematics and Mechanics</i> , 2015, 15, 139-140.	0.2	0

#	ARTICLE	IF	CITATIONS
19	A coupled two-scale shell model with applications to layered structures. International Journal for Numerical Methods in Engineering, 2013, 94, 1233-1254.	2.8	46
20	Hochbelastbare CFK-Biege- und CFK-Querkraftträger: Nichtlineare Finite-Elemente-Analyse zu Traglast- und Stabilitätsuntersuchungen von Kastenträgern. Stahlbau, 2013, 82, 464-469.	0.1	0
21	Coupled multiscale finite element analysis of shell structures. Proceedings in Applied Mathematics and Mechanics, 2012, 12, 187-188.	0.2	2
22	A nonlinear Hu-Washizu variational formulation and related finite-element implementation for spatial beams with arbitrary moderate thick cross-sections. Computer Methods in Applied Mechanics and Engineering, 2011, 200, 1671-1690.	6.6	33
23	Four-node Hu-Washizu elements based on skew coordinates and contravariant assumed strain. Computers and Structures, 2010, 88, 1278-1284.	4.4	27
24	Computation of the Three-Dimensional Stress State in Composite Shell Structures with Mixed Finite Elements. Proceedings in Applied Mathematics and Mechanics, 2010, 10, 217-218.	0.2	0
25	An enhanced FSDT model for the calculation of interlaminar shear stresses in composite plate structures. Computational Mechanics, 2009, 44, 765-776.	4.0	18
26	A mixed hybrid finite beam element with an interface to arbitrary three-dimensional material models. Computer Methods in Applied Mechanics and Engineering, 2009, 198, 2053-2066.	6.6	35
27	Construction of anisotropic polyconvex energies and applications to thin shells. Computational Materials Science, 2009, 46, 639-641.	3.0	6
28	A mixed shell formulation accounting for thickness strains and finite strain 3d material models. International Journal for Numerical Methods in Engineering, 2008, 74, 945-970.	2.8	63
29	Analysis of thin shells using anisotropic polyconvex energy densities. Computer Methods in Applied Mechanics and Engineering, 2008, 197, 1015-1032.	6.6	28
30	Squaring the circle – A curious phenomenon of fcc single crystals in spherical microindentation. Computational Materials Science, 2007, 39, 172-178.	3.0	11
31	A robust non-linear solid shell element based on a mixed variational formulation. Computer Methods in Applied Mechanics and Engineering, 2006, 195, 179-201.	6.6	142
32	Structural analysis of composite laminates using a mixed hybrid shell element. Computational Mechanics, 2006, 37, 479-497.	4.0	62
33	A robust non-linear mixed hybrid quadrilateral shell element. International Journal for Numerical Methods in Engineering, 2005, 64, 635-666.	2.8	107
34	A linear quadrilateral shell element with fast stiffness computation. Computer Methods in Applied Mechanics and Engineering, 2005, 194, 4279-4300.	6.6	56
35	Delamination growth analysis of composite panels. Revue Europeenne Des Elements, 2004, 13, 915-929.	0.1	0
36	A stabilized one-point integrated quadrilateral Reissner-Mindlin plate element. International Journal for Numerical Methods in Engineering, 2004, 61, 2273-2295.	2.8	46

#	ARTICLE	IF	CITATIONS
37	Elastoplastic orthotropy at finite strains: multiplicative formulation and numerical implementation. Computational Materials Science, 2003, 28, 732-742.	3.0	74
38	Application of generalized measures to an orthotropic finite elasto-plasticity model. Computational Materials Science, 2003, 28, 696-703.	3.0	17
39	Genaue Berechnung der elastischen Grenzmomente von Walzprofilen bei Torsionsbelastung. Stahlbau, 2002, 71, 803-814.	0.1	3
40	A simple orthotropic finite elasto-plasticity model based on generalized stress-strain measures. Computational Mechanics, 2002, 30, 48-64.	4.0	77
41	Elastic and plastic analysis of thin-walled structures using improved hexahedral elements. Computers and Structures, 2002, 80, 857-869.	4.4	32
42	A displacement method for the analysis of flexural shear stresses in thin-walled isotropic composite beams. Computers and Structures, 2002, 80, 1843-1851.	4.4	28
43	Shear correction factors in Timoshenko's beam theory for arbitrary shaped cross-sections. Computational Mechanics, 2001, 27, 199-207.	4.0	188
44	Finite element analysis of Saint-Venant torsion problem with exact integration of the elastic-plastic constitutive equations. Computer Methods in Applied Mechanics and Engineering, 2001, 190, 3831-3848.	6.6	36
45	A finite element formulation for the simulation of propagating delaminations in layered composite structures. International Journal for Numerical Methods in Engineering, 2001, 51, 1337-1359.	2.8	36
46	Theory and numerics of three-dimensional beams with elastoplastic material behaviour. International Journal for Numerical Methods in Engineering, 2000, 48, 1675-1702.	2.8	130
47	Delamination growth analysis in laminated structures with continuum-based 3D-shell elements and a viscoplastic softening model. Computer Methods in Applied Mechanics and Engineering, 2000, 185, 123-139.	6.6	45
48	A continuum based three-dimensional shell element for laminated structures. Computers and Structures, 1999, 71, 43-62.	4.4	189
49	Shear stresses in prismatic beams with arbitrary cross-sections. International Journal for Numerical Methods in Engineering, 1999, 45, 865-889.	2.8	80
50	Tafeln der Torsionskenngrößen von Walzprofilen unter Verwendung von FE-Diskretisierungen. Stahlbau, 1999, 68, 102-111.	0.1	9
51	A geometrical nonlinear eccentric 3D-beam element with arbitrary cross-sections. Computer Methods in Applied Mechanics and Engineering, 1998, 160, 383-400.	6.6	64
52	Coupling of two- and three-dimensional composite shell elements in linear and non-linear applications. Computer Methods in Applied Mechanics and Engineering, 1996, 129, 271-287.	6.6	21
53	A 4-node finite shell element for the implementation of general hyperelastic 3D-elasticity at finite strains. Computer Methods in Applied Mechanics and Engineering, 1996, 130, 57-79.	6.6	216
54	A simple finite rotation formulation for composite shell elements. Engineering Computations, 1994, 11, 145-176.	1.4	47

#	ARTICLE	IF	CITATIONS
55	On the numerical analysis of local effects in composite structures. <i>Composite Structures</i> , 1994, 29, 1-12.	5.8	28
56	Thin shells with finite rotations formulated in biot stresses: Theory and finite element formulation. <i>International Journal for Numerical Methods in Engineering</i> , 1993, 36, 2049-2071.	2.8	80
57	A consistent finite element formulation of nonlinear membrane shell theory with particular reference to elastic rubberlike material. <i>Finite Elements in Analysis and Design</i> , 1993, 13, 75-86.	3.2	24
58	A nonlinear composite shell element with continuous interlaminar shear stresses. <i>Computational Mechanics</i> , 1993, 13, 175-188.	4.0	29
59	A nonlinear quadrilateral shell element with drilling degrees of freedom. <i>Archive of Applied Mechanics</i> , 1992, 62, 474-486.	2.2	28
60	Theory and finite element formulation of rubberlike membrane shells using principal stretches. <i>International Journal for Numerical Methods in Engineering</i> , 1992, 35, 1111-1126.	2.8	116
