#	ARTICLE	IF	CITATIONS
1	Recombinant immunotoxin engineered for low immunogenicity and antigenicity by identifying and silencing human B-cell epitopes. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2012, 109, 11782-11787.	7.1	145
2	The Influence of Domain Structures on the Signal Transduction of Chimeric Receptors Derived from the Erythropoietin Receptor. <i>Journal of Biochemistry</i> , 2009, 145, 575-584.	1.7	34
3	A recombinant immunotoxin engineered for increased stability by adding a disulfide bond has decreased immunogenicity. <i>Protein Engineering, Design and Selection</i> , 2012, 25, 1-6.	2.1	30
4	Identification of an inducible glucosyltransferase from <i>Phytolacca americana</i> L. cells that are capable of glucosylating capsaicin. <i>Plant Biotechnology</i> , 2009, 26, 285-292.	1.0	24
5	Construction of a fluorescein-responsive chimeric receptor with strict ligand dependency. <i>Biotechnology and Bioengineering</i> , 2008, 101, 975-984.	3.3	23
6	Responses to LPS boost effector CD8 T-cell accumulation outside of signals 1 and 2. <i>Cellular and Molecular Immunology</i> , 2017, 14, 254-264.	10.5	10
7	Megakaryocytic Potentiating Factor and Mature Mesothelin Stimulate the Growth of a Lung Cancer Cell Line in the Peritoneal Cavity of Mice. <i>PLoS ONE</i> , 2014, 9, e104388.	2.5	8
8	TNF and CD28 Signaling Play Unique but Complementary Roles in the Systemic Recruitment of Innate Immune Cells after <i>Staphylococcus aureus</i> Enterotoxin A Inhalation. <i>Journal of Immunology</i> , 2016, 196, 4510-4521.	0.8	7
9	Optimal CD4 T cell priming after LPS-based adjuvanticity with CD134 costimulation relies on CXCL9 production. <i>Journal of Leukocyte Biology</i> , 2017, 102, 57-69.	3.3	4
