| #  | Article                                                                                                                                                                                                                            | IF  | CITATIONS |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 1  | Partition sums for non-local thermodynamic equilibrium conditions for nine molecules of importance in planetary atmospheres. Icarus, 2022, 378, 114947.                                                                            | 1.1 | 9         |
| 2  | Total internal partition sums for the HITRAN2020 database. Journal of Quantitative Spectroscopy and Radiative Transfer, 2021, 271, 107713.                                                                                         | 1.1 | 35        |
| 3  | Vibrational dependence, temperature dependence, and prediction of line shape parameters for the H2O-N2 collision system. Journal of Quantitative Spectroscopy and Radiative Transfer, 2020, 253, 107030.                           | 1.1 | 10        |
| 4  | Reduced matrix elements in semi-classical line shape calculations: Application to H2O-H2. Journal of Physics: Conference Series, 2019, 1289, 012023.                                                                               | 0.3 | 0         |
| 5  | Reduced matrix elements for collisionally induced transitions of 12CH4. Journal of Quantitative Spectroscopy and Radiative Transfer, 2019, 235, 31-39.                                                                             | 1.1 | 3         |
| 6  | Vibrational dependence, temperature dependence, and prediction of line shape parameters for the H2O-H2 collision system. Icarus, 2019, 326, 186-196.                                                                               | 1.1 | 8         |
| 7  | Modified complex Robert-Bonamy calculations of line shape parameters and their temperature<br>dependence for water vapor in collision with N2. Journal of Quantitative Spectroscopy and Radiative<br>Transfer, 2019, 228, 79-89.   | 1.1 | 10        |
| 8  | Line shape parameters of air-broadened water vapor transitions in the ν1 and ν3 spectral region. Journal of Molecular Spectroscopy, 2018, 348, 13-36.                                                                              | 0.4 | 9         |
| 9  | Multispectrum analysis of air-broadened spectra in the ν3 Q branch of 12CH4. Journal of Quantitative Spectroscopy and Radiative Transfer, 2018, 206, 409-429.                                                                      | 1.1 | 7         |
| 10 | Line shape parameters for the H2O–H2 collision system for application to exoplanet and planetary atmospheres. Icarus, 2018, 306, 275-284.                                                                                          | 1.1 | 13        |
| 11 | Positions, intensities and line shape parameters for the 1â†0 bands of CO isotopologues. Journal of<br>Quantitative Spectroscopy and Radiative Transfer, 2018, 218, 203-230.                                                       | 1.1 | 14        |
| 12 | On the temperature dependence of half-widths and line shifts for molecular transitions in the<br>microwave and infrared regions. Journal of Quantitative Spectroscopy and Radiative Transfer, 2018,<br>217, 440-452.               | 1.1 | 43        |
| 13 | Line parameters for CO2 broadening in the ν2 band of HD16O. Journal of Quantitative Spectroscopy and Radiative Transfer, 2017, 187, 472-488.                                                                                       | 1.1 | 13        |
| 14 | Line parameters for CO2- and self-broadening in the ν1 band of HD16O. Journal of Quantitative Spectroscopy and Radiative Transfer, 2017, 203, 133-157.                                                                             | 1.1 | 11        |
| 15 | Total internal partition sums for 166 isotopologues of 51 molecules important in planetary<br>atmospheres: Application to HITRAN2016 and beyond. Journal of Quantitative Spectroscopy and<br>Radiative Transfer, 2017, 203, 70-87. | 1.1 | 122       |
| 16 | Recommended Ideal-Gas Thermochemical Functions for Heavy Water and its Substituent<br>Isotopologues. Journal of Physical and Chemical Reference Data, 2017, 46, .                                                                  | 1.9 | 17        |
| 17 | Line parameters for CO2- and self-broadening in the ν3 band of HD16O. Journal of Quantitative<br>Spectroscopy and Radiative Transfer, 2017, 203, 158-174.                                                                          | 1.1 | 17        |
| 18 | Line parameters including temperature dependences of self- and air-broadened line shapes of 12C16O2:                                                                                                                               | 1.1 | 52        |

| #  | Article                                                                                                                                                                                                                                              | IF          | CITATIONS      |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|----------------|
| 19 | Line parameters including temperature dependences of air- and self-broadened line shapes of 12C16O2: 2.06-1¼m region. Journal of Molecular Spectroscopy, 2016, 326, 21-47.                                                                           | 0.4         | 42             |
| 20 | New visions of spectroscopic databases: An introduction to the special issue. Journal of Molecular Spectroscopy, 2016, 326, 1-4.                                                                                                                     | 0.4         | 2              |
| 21 | A spectral line list for water isotopologues in the 1100–4100 cmâ^'1 region for application to CO2-rich planetary atmospheres. Journal of Molecular Spectroscopy, 2016, 326, 144-150.                                                                | 0.4         | 33             |
| 22 | Recommended isolated-line profile for representing high-resolution spectroscopic transitions (IUPAC) Tj ETQq0                                                                                                                                        | 0 0 rgBT /0 | Overlock 10 Tf |
| 23 | A database of water transitions from experiment and theory (IUPAC Technical Report). Pure and Applied Chemistry, 2014, 86, 71-83.                                                                                                                    | 0.9         | 76             |
| 24 | An intercomparison of measured pressure-broadening, pressure shifting parameters of carbon dioxide<br>and their temperature dependence. Journal of Quantitative Spectroscopy and Radiative Transfer, 2014,<br>135, 30-43.                            | 1.1         | 24             |
| 25 | IUPAC critical evaluation of the rotational–vibrational spectra of water vapor. Part IV. Energy levels<br>and transition wavenumbers for D216O, D217O, and D218O. Journal of Quantitative Spectroscopy and<br>Radiative Transfer, 2014, 142, 93-108. | 1.1         | 80             |
| 26 | Reliable infrared line lists for 13 CO2 isotopologues up to E′=18,000cmâ^'1 and 1500K, with line shape parameters. Journal of Quantitative Spectroscopy and Radiative Transfer, 2014, 147, 134-144.                                                  | 1.1         | 72             |
| 27 | The vibrational dependence of half-widths of CO2 transitions broadened by N2, O2, air, and CO2.<br>Journal of Quantitative Spectroscopy and Radiative Transfer, 2013, 117, 93-103.                                                                   | 1.1         | 25             |
| 28 | Predicting accurate line shape parameters for CO2 transitions. Journal of Quantitative Spectroscopy and Radiative Transfer, 2013, 130, 158-171.                                                                                                      | 1.1         | 44             |
| 29 | IUPAC critical evaluation of the rotational–vibrational spectra of water vapor, Part III: Energy levels<br>and transition wavenumbers for H216O. Journal of Quantitative Spectroscopy and Radiative Transfer,<br>2013, 117, 29-58.                   | 1.1         | 215            |
| 30 | Semiclassical calculations of half-widths and line shifts for transitions in the 30012â†00001 and 30013â†00001 bands of CO2, I: Collisions with N2. Journal of Quantitative Spectroscopy and Radiative Transfer, 2012, 113, 976-990.                 | 1.1         | 43             |
| 31 | Semiclassical calculations of half-widths and line shifts for transitions in the 30012â†00001 and 30013â†00001 bands of CO2 II: Collisions with O2 and air. Journal of Quantitative Spectroscopy and Radiative Transfer, 2012, 113, 991-1003.        | 1.1         | 41             |
| 32 | Semiclassical calculations of half-widths and line shifts for transitions in the 30012â†00001 and 30013â†00001 bands of CO2. III: Self collisions. Journal of Quantitative Spectroscopy and Radiative Transfer, 2012, 113, 1536-1546.                | 1.1         | 45             |
| 33 | Total internal partition sums to support planetary remote sensing. Icarus, 2011, 215, 391-400.                                                                                                                                                       | 1.1         | 70             |
| 34 | Half-widths, their temperature dependence, and line shifts for the HDO–CO2 collision system for applications to CO2-rich planetary atmospheres. Icarus, 2011, 213, 720-730.                                                                          | 1.1         | 37             |
| 35 | On the Way to Complex Robert-Bonamy Calculations of Self-, Nitrogen, Oxygen, and Air-Broadened Line<br>Shape Parameters of CO[sub 2]. , 2010, , .                                                                                                    |             | 0              |
| 36 | IUPAC critical evaluation of the rotational–vibrational spectra of water vapor. Part II. Journal of<br>Quantitative Spectroscopy and Radiative Transfer, 2010, 111, 2160-2184.                                                                       | 1.1         | 178            |

| #  | Article                                                                                                                                                                                                                                      | IF  | CITATIONS |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 37 | N2-, O2-, and air-broadened half-widths, their temperature dependence, and line shifts for the rotation band of H216O. Journal of Molecular Spectroscopy, 2009, 257, 116-127.                                                                | 0.4 | 46        |
| 38 | IUPAC critical evaluation of the rotational–vibrational spectra of water vapor. Part l—Energy levels<br>and transition wavenumbers for H217O and H218O. Journal of Quantitative Spectroscopy and Radiative<br>Transfer, 2009, 110, 573-596.  | 1.1 | 188       |
| 39 | N2-, O2- and air-broadened half-widths and line shifts for transitions in the ν3 band of methane in the 2726- to 3200-cmâ~1 spectral region. Journal of Molecular Spectroscopy, 2008, 251, 268-281.                                          | 0.4 | 28        |
| 40 | Temperature dependent air-broadened linewidths of ozone rotational transitions. Journal of Molecular Spectroscopy, 2008, 251, 194-202.                                                                                                       | 0.4 | 13        |
| 41 | Air-Broadened Half-Widths of the 22- and 183-GHz Water-Vapor Lines. IEEE Transactions on Geoscience and Remote Sensing, 2008, 46, 3601-3617.                                                                                                 | 2.7 | 71        |
| 42 | Self-broadening of water vapor transitions via the complex Robert–Bonamy theory. Journal of<br>Quantitative Spectroscopy and Radiative Transfer, 2007, 105, 148-163.                                                                         | 1.1 | 33        |
| 43 | Current updates of the water-vapor line list in HITRAN: A new "Diet―for air-broadened half-widths.<br>Journal of Quantitative Spectroscopy and Radiative Transfer, 2007, 108, 389-402.                                                       | 1.1 | 71        |
| 44 | Diode laser spectroscopic measurements and theoretical calculations of line parameters of<br>nitrogen-broadened water vapor overtone transitions in the 818–834nm wavelength region. Journal<br>of Molecular Spectroscopy, 2007, 242, 10-16. | 0.4 | 6         |
| 45 | Self-broadened half-widths and self-induced line shifts for water vapor transitions in the 3.2–17.76μm<br>spectral region via complex Robert–Bonamy theory. Journal of Molecular Spectroscopy, 2007, 243,<br>113-123.                        | 0.4 | 12        |
| 46 | Einstein A-coefficients and statistical weights for molecular absorption transitions in the HITRAN database. Journal of Quantitative Spectroscopy and Radiative Transfer, 2006, 98, 130-155.                                                 | 1.1 | 179       |
| 47 | Half-Widths and Line Shifts of Water Vapor for Atmospheric Applications: Measurement and Theory. ,<br>2006, , 203-220.                                                                                                                       |     | 0         |
| 48 | Lineshape parameters for water vapor in the 3.2–17.76μm region for atmospheric applications. Journal of Molecular Spectroscopy, 2005, 229, 9-18.                                                                                             | 0.4 | 35        |
| 49 | Temperature dependent pressure induced lineshape of O3 rotational transitions in air. Journal of Quantitative Spectroscopy and Radiative Transfer, 2004, 83, 63-81.                                                                          | 1.1 | 35        |
| 50 | Collisional parameters of H2O lines: effects of vibration. Journal of Quantitative Spectroscopy and Radiative Transfer, 2004, 83, 119-147.                                                                                                   | 1.1 | 82        |
