| # | Article                                                                                                                                                                                         | IF  | CITATIONS |
|---|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 1 | The National Cardiovascular Data Registry Data Quality Program 2020. Journal of the American College of Cardiology, 2022, 79, 1704-1712.                                                        | 2.8 | 15        |
| 2 | Long-term cardiovascular outcomes of patients with extreme obesity following atrial fibrillation ablation. Europace, $2021, 23, .$                                                              | 1.7 | 0         |
| 3 | The Role of Computer Skills in Personal Health Record Adoption Among Patients With Heart Disease:<br>Multidimensional Evaluation of Users Versus Nonusers. JMIR Human Factors, 2021, 8, e19191. | 2.0 | 1         |
| 4 | Roadmap to a more useful and usable electronic health record. Cardiovascular Digital Health Journal, 2021, 2, 301-311.                                                                          | 1.3 | 7         |
| 5 | Usability and cognitive load in the design of a personal health record. Health Policy and Technology, 2020, 9, 218-224.                                                                         | 2.5 | 15        |
| 6 | Impact of Age on Patients' Communication and Technology Preferences in the Era of Meaningful Use:<br>Mixed Methods Study. Journal of Medical Internet Research, 2020, 22, e13470.               | 4.3 | 19        |
| 7 |                                                                                                                                                                                                 |     |           |
|   |                                                                                                                                                                                                 |     |           |
|   |                                                                                                                                                                                                 |     |           |
|   |                                                                                                                                                                                                 |     |           |
|   |                                                                                                                                                                                                 |     |           |
|   |                                                                                                                                                                                                 |     |           |
|   |                                                                                                                                                                                                 |     |           |
|   |                                                                                                                                                                                                 |     |           |
|   |                                                                                                                                                                                                 |     |           |
|   |                                                                                                                                                                                                 |     |           |

| #  | Article                                                                                                                                                                                                                                  | IF  | CITATIONS |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 19 | Performance of generalized eigensystem and truncated singular value decomposition methods for the inverse problem of electrocardiography. Inverse Problems in Science and Engineering, 1997, 5, 239-277.                                 | 0.5 | 8         |
| 20 | Problematic Palpitations and Exercise Induced Preexcitation. PACE - Pacing and Clinical Electrophysiology, 1997, 20, 122-124.                                                                                                            | 1.2 | 0         |
| 21 | Importance of a non-dominant right coronary artery occlusion presenting as sudden cardiac death with prolonged right ventricular dysfunction and malignant arrhythmias. Catheterization and Cardiovascular Diagnosis, 1995, 35, 257-261. | 0.3 | 9         |
| 22 | Clinical Comparison of Acute Single to Dual Chamber Pacing in Chronotropically Incompetent Patients with Left Ventricular Dysfunction. PACE - Pacing and Clinical Electrophysiology, 1995, 18, 433-440.                                  | 1.2 | 5         |
| 23 | A Multipurpose, Self-Adhesive Patch Electrode Capable of External Pacing, Cardioversion<br>Defibrillation, and 12-Lead Electrocardiogram. PACE - Pacing and Clinical Electrophysiology, 1993, 16,<br>235-241.                            | 1.2 | O         |
| 24 | False-negative findings in pericardial effusion using M-mode echocardiography. Pediatric Cardiology, 1983, 4, 225-228.                                                                                                                   | 1.3 | 3         |
