#	ARTICLE	IF	CITATIONS
1	Temporal vision: measures, mechanisms and meaning. <i>Journal of Experimental Biology</i> , 2021, 224, .	0.8	16
2	Dark-adaptation in the eyes of a lake and a sea population of opossum shrimp (<i>Mysis relicta</i>): retinoid isomer dynamics, rhodopsin regeneration, and recovery of light sensitivity. <i>Journal of Comparative Physiology A: Neuroethology, Sensory, Neural, and Behavioral Physiology</i> , 2020, 206, 871-889.	0.7	1
3	A frog's eye view: Foundational revelations and future promises. <i>Seminars in Cell and Developmental Biology</i> , 2020, 106, 72-85.	2.3	23
4	Photoreceptors and eyes of pikeperch (<i>Sander lucioperca</i>), pike (<i>Esox lucius</i>), perch (<i>Perca fluviatilis</i>) and roach (<i>Rutilus rutilus</i>) from a clear and a brown lake. <i>Journal of Fish Biology</i> , 2019, 95, 200-213.	0.7	9
5	The dual rod system of amphibians supports colour discrimination at the absolute visual threshold. <i>Philosophical Transactions of the Royal Society B: Biological Sciences</i> , 2017, 372, 20160066.	1.8	72
6	Increasing the illumination slowly over several weeks protects against light damage in the eyes of the crustacean <i>Mysis relicta</i> . <i>Journal of Experimental Biology</i> , 2017, 220, 2798-2808.	0.8	3
7	Eye spectral sensitivity in fresh- and brackish-water populations of three glacial-relict <i>Mysis</i> species (Crustacea): physiology and genetics of differential tuning. <i>Journal of Comparative Physiology A: Neuroethology, Sensory, Neural, and Behavioral Physiology</i> , 2016, 202, 297-312.	0.7	10
8	Lake and Sea Populations of <i>Mysis relicta</i> (Crustacea, Mysida) with Different Visual-Pigment Absorbance Spectra Use the Same A1 Chromophore. <i>PLoS ONE</i> , 2014, 9, e88107.	1.1	4
9	Spectral tuning by selective chromophore uptake in rods and cones of eight populations of nine-spined stickleback (<i>Pungitius pungitius</i>). <i>Journal of Experimental Biology</i> , 2012, 215, 2760-2773.	0.8	25
10	Opsin gene sequence variation across phylogenetic and population histories in <i>Mysis</i> (Crustacea: Mysida) does not match current light environments or visual pigment absorbance spectra. <i>Molecular Ecology</i> , 2012, 21, 2176-2196.	2.0	9
11	The effect of mean luminance change and grating pedestals on contrast perception: Model simulations suggest a common, retinal, origin. <i>Vision Research</i> , 2012, 58, 51-58.	0.7	6
12	Effects of Mean Luminance Changes on Human Contrast Perception: Contrast Dependence, Time-Course and Spatial Specificity. <i>PLoS ONE</i> , 2011, 6, e17200.	1.1	7
13	Eye Adaptation to Different Light Environments in Two Populations of <i>Mysis relicta</i> : A Comparative Study of Carotenoids and Retinoids. <i>Journal of Crustacean Biology</i> , 2010, 30, 636-642.	0.3	15
14	Rod Phototransduction Determines the Trade-Off of Temporal Integration and Speed of Vision in Dark-Adapted Toads. <i>Journal of Neuroscience</i> , 2009, 29, 5716-5725.	1.7	12
15	Individual variation in rod absorbance spectra correlated with opsin gene polymorphism in sand goby (<i>Pomatoschistus minutus</i>). <i>Journal of Experimental Biology</i> , 2009, 212, 3415-3421.	0.8	7
16	Visual pigments of Baltic Sea fishes of marine and limnic origin. <i>Visual Neuroscience</i> , 2007, 24, 389-398.	0.5	34
17	Chromophore switch from 11-cis-dehydroretinal (A2) to 11-cis-retinal (A1) decreases dark noise in salamander red rods. <i>Journal of Physiology</i> , 2007, 585, 57-74.	1.3	51
18	Modelling the effect of microsaccades on retinal responses to stationary contrast patterns. <i>Vision Research</i> , 2007, 47, 1166-1177.	0.7	49

#	ARTICLE	IF	CITATIONS
19	Time course of suppression by surround gratings: Highly contrast-dependent, but consistently fast. <i>Vision Research</i> , 2007, 47, 3298-3306.	0.7	15
20	The photoactivation energy of the visual pigment in two spectrally different populations of <i>Mysis relicta</i> (Crustacea, Mysida). <i>Journal of Comparative Physiology A: Neuroethology, Sensory, Neural, and Behavioral Physiology</i> , 2005, 191, 837-844.	0.7	10
21	Visual pigment absorbance and spectral sensitivity of the <i>Mysis relicta</i> species group (Crustacea, Mysida). <i>Journal of Comparative Physiology A: Neuroethology, Sensory, Neural, and Behavioral Physiology</i> , 2005, 191, 1087-1097.	0.7	32
22	Thermal Activation and Photoactivation of Visual Pigments. <i>Biophysical Journal</i> , 2004, 86, 3653-3662.	0.2	80
23	On the relation between the photoactivation energy and the absorbance spectrum of visual pigments. <i>Vision Research</i> , 2004, 44, 2153-2158.	0.7	37
24	Visual reaction time: neural conditions for the equivalence of stimulus area and contrast. <i>Vision Research</i> , 2003, 43, 2937-2940.	0.7	16
25	Efficiency of Temporal Integration of Sinusoidal Flicker. <i>Vision Research</i> , 2003, 44, 5049.		4
26	Polymorphism of the rod visual pigment between allopatric populations of the sand goby (<i>Pomatoschistus minutus</i>): a microspectrophotometric study. <i>Journal of Experimental Biology</i> , 2003, 206, 2611-2617.	0.8	23
27	The thermal contribution to photoactivation in A2 visual pigments studied by temperature effects on spectral properties. <i>Visual Neuroscience</i> , 2003, 20, 411-419.	0.5	18
28	Temperature effects on spectral properties of red and green rods in toad retina. <i>Visual Neuroscience</i> , 2002, 19, 781-792.	0.5	22
29	pH and rate of dark events in toad retinal rods: test of a hypothesis on the molecular origin of photoreceptor noise. <i>Journal of Physiology</i> , 2002, 539, 837-846.	1.3	21
30	In search of the visual pigment template. <i>Visual Neuroscience</i> , 2000, 17, 509-528.	0.5	910
31	Measurement of thermal contribution to photoreceptor sensitivity. <i>Nature</i> , 2000, 403, 220-223.	13.7	39
32	Flicker sensitivity as a function of target area with and without temporal noise. <i>Vision Research</i> , 2000, 40, 3841-3851.	0.7	10
33	The effects of temporal noise and retinal illuminance on foveal flicker sensitivity. <i>Vision Research</i> , 1999, 39, 533-550.	0.7	32
34	Light adaptation of cone photoresponses studied at the photoreceptor and ganglion cell levels in the frog retina. <i>Vision Research</i> , 1998, 38, 19-36.	0.7	27
35	Rhodopsins from Three Frog and Toad Species: Sequences and Functional Comparisons. <i>Experimental Eye Research</i> , 1998, 66, 295-305.	1.2	16
36	Noise-equivalent and signal-equivalent visual summation of quantal events in space and time. <i>Visual Neuroscience</i> , 1998, 15, 731-742.	0.5	13

#	ARTICLE	IF	CITATIONS
37	The Effect of Background Luminance on Visual Responses to Strong Flashes: Perceived Brightness and the Early Rise of Photoreceptor Responses. <i>Vision Research</i> , 1996, 36, 3253-3264.	0.7	9
38	pH Changes in Frog Rods upon Manipulation of Putative pH-regulating Transport Mechanisms. <i>Vision Research</i> , 1996, 36, 3029-3036.	0.7	7
39	Flicker Sensitivity as a Function of Spectral Density of External White Temporal Noise. <i>Vision Research</i> , 1996, 36, 3767-3774.	0.7	24
40	Modelling the spatio-temporal modulation response of ganglion cells with difference-of-Gaussians receptive fields: Relation to photoreceptor response kinetics. <i>Visual Neuroscience</i> , 1996, 13, 173-186.	0.5	28
41	Changes in retinal time scale under background light: Observations on rods and ganglion cells in the frog retina. <i>Vision Research</i> , 1995, 35, 2255-2266.	0.7	36
42	Changes in the light-sensitive current of salamander rods upon manipulation of putative pH-regulating mechanisms in the inner and outer segment. <i>Vision Research</i> , 1994, 34, 983-994.	0.7	17
43	Response univariance in bull-frog rods with two visual pigments. <i>Vision Research</i> , 1994, 34, 839-847.	0.7	14
44	pH regulation in frog cones studied by mass receptor photoresponses from the isolated retina. <i>Vision Research</i> , 1993, 33, 2181-2188.	0.7	14
45	Noise and the absolute thresholds of cone and rod vision. <i>Vision Research</i> , 1992, 32, 853-866.	0.7	90
46	On the relation between ERG waves and retinal function: Inverted rod photoresponses from the frog retina. <i>Vision Research</i> , 1992, 32, 1411-1416.	0.7	5
47	Sulfhydryl binding reagents increase the conductivity of the light-sensitive channel and inhibit phototransduction in retinal rods. <i>Experimental Eye Research</i> , 1990, 51, 97-105.	1.2	14
48	Visual latency and brightness: An interpretation based on the responses of rods and ganglion cells in the frog retina. <i>Visual Neuroscience</i> , 1989, 3, 39-51.	0.5	36
49	The absolute sensitivity of vision: can a frog become a perfect detector of light-induced and dark rod events?. <i>Physica Scripta</i> , 1989, 39, 133-140.	1.2	14
50	Effects of sulfhydryl binding reagents on the photoresponses of amphibian retinal rods. <i>Comparative Biochemistry and Physiology A, Comparative Physiology</i> , 1989, 94, 125-132.	0.7	4
51	Surround control of center adaptation in the receptive fields of frog retinal ganglion cells. <i>Vision Research</i> , 1987, 27, 1211-1221.	0.7	5
52	Transient sensitivity reduction and biphasic photoresponses observed when frog retinal rods are oxidized. <i>Comparative Biochemistry and Physiology A, Comparative Physiology</i> , 1987, 87, 749-756.	0.7	5
53	Does the random distribution of discrete photoreceptor events limit the sensitivity of the retina?. <i>Neuroscience Research Supplement: the Official Journal of the Japan Neuroscience Society</i> , 1986, 4, S163-S180.	0.0	1
54	Does the random distribution of discrete photoreceptor events limit the sensitivity of the retina?. <i>Neuroscience Research</i> , 1986, 4, S163-S180.	1.0	12

#	ARTICLE	IF	CITATIONS
55	Rhodopsin phosphorylation inhibited by adenosine in frog rods: Lack of effects on excitation. <i>Comparative Biochemistry and Physiology A, Comparative Physiology</i> , 1985, 81, 431-439.	0.7	16
56	Center and surround excitation in the receptive fields of frog retinal ganglion cells. <i>Vision Research</i> , 1984, 24, 1807-1819.	0.7	23
57	How the latencies of excitation and inhibition determine ganglion cell thresholds and discharge patterns in the frog. <i>Vision Research</i> , 1981, 21, 1689-1692.	0.7	10
