#	ARTICLE	IF	CITATIONS
1	Modelling the performance of bunds and ditch dams in the hydrological restoration of tropical peatlands. <i>Hydrological Processes</i> , 2022, 36, .	1.1	3
2	Carbon concentrations in natural and restoration pools in blanket peatlands. <i>Hydrological Processes</i> , 2022, 36, .	1.1	5
3	Tropical Peatland Hydrology Simulated With a Global Land Surface Model. <i>Journal of Advances in Modeling Earth Systems</i> , 2022, 14, .	1.3	9
4	The effect of crab burrows on soil-water dynamics in mangroves. <i>Hydrological Processes</i> , 2022, 36, .	1.1	6
5	A regime shift from erosion to carbon accumulation in a temperate northern peatland. <i>Journal of Ecology</i> , 2021, 109, 125-138.	1.9	8
6	Overriding water table control on managed peatland greenhouse gas emissions. <i>Nature</i> , 2021, 593, 548-552.	13.7	172
7	The effects of ditch dams on water-level dynamics in tropical peatlands. <i>Hydrological Processes</i> , 2021, 35, e14174.	1.1	4
8	Fine root production in a chronosequence of mature reforested mangroves. <i>New Phytologist</i> , 2021, 232, 1591-1602.	3.5	21
9	A cautionary tale about using the apparent carbon accumulation rate (aCAR) obtained from peat cores. <i>Scientific Reports</i> , 2021, 11, 9547.	1.6	22
10	Linking ecosystem changes to their social outcomes: Lost in translation. <i>Ecosystem Services</i> , 2021, 50, 101327.	2.3	4
11	A new approach for measuring surface hydrological connectivity. <i>Hydrological Processes</i> , 2020, 34, 538-552.	1.1	4
12	Sensitivity of mangrove soil organic matter decay to warming and sea level change. <i>Global Change Biology</i> , 2020, 26, 1899-1907.	4.2	25
13	First Evidence of Peat Domes in the Congo Basin using LiDAR from a Fixed-Wing Drone. <i>Remote Sensing</i> , 2020, 12, 2196.	1.8	18
14	Comment on: "Peatland carbon stocks and burn history: Blanket bog peat core evidence highlights charcoal impacts on peat physical properties and long-term carbon storage," by A. Heinemeyer, Q. Asena, W. L. Burn and A. L. Jones (<i>Geo: Geography and Environment</i> 2018; e00063). <i>Geo: Geography and Environment</i> , 2019, 6, e00075.	0.5	2
15	The Importance of CH ₄ Ebullition in Floodplain Fens. <i>Journal of Geophysical Research C: Biogeosciences</i> , 2019, 124, 1750-1763.	1.3	12
16	Validity of managing peatlands with fire. <i>Nature Geoscience</i> , 2019, 12, 884-885.	5.4	9
17	EnRoot: a narrow-diameter, inexpensive and partially 3D-printable minirhizotron for imaging fine root production. <i>Plant Methods</i> , 2019, 15, 101.	1.9	20
18	Microtopographic Drivers of Vegetation Patterning in Blanket Peatlands Recovering from Erosion. <i>Ecosystems</i> , 2019, 22, 1035-1054.	1.6	24

#	ARTICLE	IF	CITATIONS
19	Controls on Near-Surface Hydraulic Conductivity in a Raised Bog. <i>Water Resources Research</i> , 2019, 55, 1531-1543.	1.7	16
20	Misinterpreting carbon accumulation rates in records from near-surface peat. <i>Scientific Reports</i> , 2019, 9, 17939.	1.6	44
21	Water-level dynamics in natural and artificial pools in blanket peatlands. <i>Hydrological Processes</i> , 2018, 32, 550-561.	1.1	11
22	Methane and carbon dioxide fluxes from open and blocked ditches in a blanket bog. <i>Plant and Soil</i> , 2018, 424, 619-638.	1.8	13
23	Testing the relationship between testate amoeba community composition and environmental variables in a coastal tropical peatland. <i>Ecological Indicators</i> , 2018, 91, 636-644.	2.6	9
24	Daytime-only measurements underestimate CH ₄ emissions from a restored bog. <i>Ecoscience</i> , 2018, 25, 259-270.	0.6	6
25	Exploring pathways to late Holocene increased surface wetness in subarctic peatlands of eastern Canada. <i>Quaternary Research</i> , 2018, 90, 83-95.	1.0	3
26	High permeability explains the vulnerability of the carbon store in drained tropical peatlands. <i>Geophysical Research Letters</i> , 2017, 44, 1333-1339.	1.5	45
27	An experimental study on the response of blanket bog vegetation and water tables to ditch blocking. <i>Wetlands Ecology and Management</i> , 2017, 25, 703-716.	0.7	14
28	Simulating the long-term impacts of drainage and restoration on the ecohydrology of peatlands. <i>Water Resources Research</i> , 2017, 53, 6510-6522.	1.7	32
29	The impact of ditch blocking on the hydrological functioning of blanket peatlands. <i>Hydrological Processes</i> , 2017, 31, 525-539.	1.1	25
30	The effect of sampling effort on estimates of methane ebullition from peat. <i>Water Resources Research</i> , 2017, 53, 4158-4168.	1.7	4
31	The effect of pore structure on ebullition from peat. <i>Journal of Geophysical Research G: Biogeosciences</i> , 2016, 121, 1646-1656.	1.3	14
32	Evaluating the use of dominant microbial consumers (testate amoebae) as indicators of blanket peatland restoration. <i>Ecological Indicators</i> , 2016, 69, 318-330.	2.6	18
33	Microform-scale variations in peatland permeability and their ecohydrological implications. <i>Journal of Ecology</i> , 2016, 104, 531-544.	1.9	28
34	Regional variation in the biogeochemical and physical characteristics of natural peatland pools. <i>Science of the Total Environment</i> , 2016, 545-546, 84-94.	3.9	24
35	Bridging the gap between models and measurements of peat hydraulic conductivity. <i>Water Resources Research</i> , 2015, 51, 5353-5364.	1.7	36
36	Testing a simple model of gas bubble dynamics in porous media. <i>Water Resources Research</i> , 2015, 51, 1036-1049.	1.7	22

#	ARTICLE	IF	CITATIONS
37	Untangling climate signals from autogenic changes in long-term peatland development. <i>Geophysical Research Letters</i> , 2015, 42, 10,788.	1.5	40
38	Ebullition of methane from peatlands: Does peat act as a signal shredder?. <i>Geophysical Research Letters</i> , 2015, 42, 3371-3379.	1.5	33
39	A mesocosm study of the effect of restoration on methane (CH ₄) emissions from blanket peat. <i>Wetlands Ecology and Management</i> , 2014, 22, 523-537.	0.7	10
40	The high hydraulic conductivity of three wooded tropical peat swamps in northeast Peru: measurements and implications for hydrological function. <i>Hydrological Processes</i> , 2014, 28, 3373-3387.	1.1	43
41	The effect of peat structure on the spatial distribution of biogenic gases within bogs. <i>Hydrological Processes</i> , 2014, 28, 5483-5494.	1.1	29
42	The dynamics of natural pipe hydrological behaviour in blanket peat. <i>Hydrological Processes</i> , 2013, 27, 1523-1534.	1.1	25
43	Hydrological hotspots in blanket peatlands: Spatial variation in peat permeability around a natural soil pipe. <i>Water Resources Research</i> , 2013, 49, 5342-5354.	1.7	26
44	The importance of episodic ebullition methane losses from three peatland microhabitats: a controlled-environment study. <i>European Journal of Soil Science</i> , 2013, 64, 27-36.	1.8	18
45	The importance of ebullition as a mechanism of methane (CH ₄) loss to the atmosphere in a northern peatland. <i>Geophysical Research Letters</i> , 2013, 40, 2087-2090.	1.5	35
46	The role of hydrological transience in peatland pattern formation. <i>Earth Surface Dynamics</i> , 2013, 1, 29-43.	1.0	11
47	Natural pipes in blanket peatlands: major point sources for the release of carbon to the aquatic system. <i>Global Change Biology</i> , 2012, 18, 3568-3580.	4.2	36
48	Variable source and age of different forms of carbon released from natural peatland pipes. <i>Journal of Geophysical Research</i> , 2012, 117, .	3.3	35
49	Do peatland microforms move through time? Examining the developmental history of a patterned peatland using ground-penetrating radar. <i>Journal of Geophysical Research</i> , 2012, 117, .	3.3	16
50	The DigiBog peatland development model 2: ecohydrological simulations in 2D. <i>Ecohydrology</i> , 2012, 5, 256-268.	1.1	43
51	The DigiBog peatland development model 1: rationale, conceptual model, and hydrological basis. <i>Ecohydrology</i> , 2012, 5, 242-255.	1.1	61
52	Ecohydrological feedbacks confound peat-based climate reconstructions. <i>Geophysical Research Letters</i> , 2012, 39, .	1.5	97
53	Morphological change of natural pipe outlets in blanket peat. <i>Earth Surface Processes and Landforms</i> , 2012, 37, 109-118.	1.2	17
54	A mesocosm study of the role of the sedge <i>Eriophorum angustifolium</i> in the efflux of methane—including that due to episodic ebullition—from peatlands. <i>Plant and Soil</i> , 2012, 351, 207-218.	1.8	56

#	ARTICLE	IF	CITATIONS
55	Ebullition events monitored from northern peatlands using electrical imaging. <i>Journal of Geophysical Research</i> , 2011, 116, .	3.3	14
56	Greenhouse gas losses from peatland pipes: A major pathway for loss to the atmosphere?. <i>Journal of Geophysical Research</i> , 2011, 116, .	3.3	18
57	Evidence that piezometers vent gas from peat soils and implications for pore-water pressure and hydraulic conductivity measurements. <i>Hydrological Processes</i> , 2009, 23, 1249-1254.	1.1	9
58	Effect of atmospheric pressure and temperature on entrapped gas content in peat. <i>Hydrological Processes</i> , 2009, 23, 2970-2980.	1.1	34
59	Conceptualizing catchment processes: simply too complex?. <i>Hydrological Processes</i> , 2008, 22, 1727-1730.	1.1	86
60	Effect of temperature and atmospheric pressure on methane (CH ₄) ebullition from near-surface peats. <i>Geophysical Research Letters</i> , 2006, 33, n/a-n/a.	1.5	82
61	Replumbing Wetlandsâ€“ Managing Water for the Restoration of Bogs and Fens. , 0, , 755-779.		3
62	Upscaling of Peatland-Atmosphere Fluxes of Methane: Small-Scale Heterogeneity in Process Rates and the Pitfalls of â€œBucket-and-Slabâ€•Models. <i>Geophysical Monograph Series</i> , 0, , 37-53.	0.1	38
63	Methane Dynamics in Peat: Importance of Shallow Peats and a Novel Reduced-Complexity Approach for Modeling Ebullition. <i>Geophysical Monograph Series</i> , 0, , 173-185.	0.1	35
64	The Role of Natural Soil Pipes in Water and Carbon Transfer in and from Peatlands. <i>Geophysical Monograph Series</i> , 0, , 251-264.	0.1	8
65	The Water Table: Its Conceptual Basis, its Measurement, and its Usefulness as a Hydrological Variable. <i>Hydrological Processes</i> , 0, , .	1.1	3
