Jozsef Baranyi

List of Publications by Year
in descending order

101 papers	7,701 citations	81743 39 h-index	51492 86 g-index
106 all docs	106 docs citations	106 times ranked	4796 citing authors

#	Article	IF	Citations
1	Distribution of bacterial single cell parameters and their estimation from turbidity detection times. Food Microbiology, 2022, 104, 103972.	2.1	0
2	Modeling Bacillus cereus Growth and Cereulide Formation in Cereal-, Dairy-, Meat-, Vegetable-Based Food and Culture Medium. Frontiers in Microbiology, 2021, 12, 639546.	1.5	15
3	A stochastic approach for modelling the effects of temperature on the growth rate of Bacillus cereus sensu lato. International Journal of Food Microbiology, 2021, 349, 109241.	2.1	10
4	Determining optimum carvacrol treatment as a cardinal value of a secondary model. International Journal of Food Microbiology, 2021, 354, 109311.	2.1	2
5	The effect of pH on the growth rate of Bacillus cereus sensu lato: Quantifying strain variability and modelling the combined effects of temperature and pH. International Journal of Food Microbiology, 2021, 360, 109420.	2.1	9
6	Big data and food science. Acta Alimentaria, 2020, 49, 1-3.	0.3	0
7	Optimization of turbidity experiments to estimate the probability of growth for individual bacterial cells. Food Microbiology, 2019, 83, 109-112.	2.1	4
8	Microbiological Testing for the Proper Assessment of the Hygiene Status of Beef Carcasses. Microorganisms, 2019, 7, 86.	1.6	12
9	Predicting the kinetics of Listeria monocytogenes and Yersinia enterocolitica under dynamic growth/death-inducing conditions, in Italian style fresh sausage. International Journal of Food Microbiology, 2017, 240, 108-114.	2.1	11
10	SalmoNet, an integrated network of ten Salmonella enterica strains reveals common and distinct pathways to host adaptation. Npj Systems Biology and Applications, 2017, 3, 31.	1.4	28
11	The use of predictive models to optimize risk of decisions. International Journal of Food Microbiology, 2017, 240, 19-23.	2.1	11
12	From Culture-Medium-Based Models to Applications to Food: Predicting the Growth of B. cereus in Reconstituted Infant Formulae. Frontiers in Microbiology, 2017, 8, 1799.	1.5	8
13	Rethinking Tertiary Models: Relationships between Growth Parameters of Bacillus cereus Strains. Frontiers in Microbiology, 2017, 8, 1890.	1.5	16
14	A Dynamic Network Analysis of the Physiological State of Foodborne Pathogens: Application to Escherichia Coli During Osmotic Stress and Comparison with Salmonella Typhimurium. Procedia Food Science, 2016, 7, 21-24.	0.6	1
15	Predicting the Behaviour of Yersinia Enterocolitica and Listeria Monocytogenes in Italian Style Fresh Sausages under Drying Period. Procedia Food Science, 2016, 7, 71-75.	0.6	1
16	Incorporating prior knowledge improves detection of differences in bacterial growth rate. BMC Systems Biology, 2015, 9, 60.	3.0	9
17	Interstrain Interactions between Bacteria Isolated from Vacuum-Packaged Refrigerated Beef. Applied and Environmental Microbiology, 2015, 81, 2753-2761.	1.4	24
18	Interactions of Salmonella enterica subspecies enterica serovar Typhimurium with gut bacteria. Anaerobe, 2015, 33, 90-97.	1.0	9

#	Article	IF	Citations
19	Integrated Kinetic and Probabilistic Modeling of the Growth Potential of Bacterial Populations. Applied and Environmental Microbiology, 2015, 81, 3228-3234.	1.4	5
20	Bacterial economics: Adaptation to stress conditions via stage-wise changes in the response mechanism. Food Microbiology, 2015, 45, 162-166.	2.1	8
21	Predictive Microbiology and Food Safety. , 2014, , 59-68.		13
22	Metabolic Shift of Escherichia coli under Salt Stress in the Presence of Glycine Betaine. Applied and Environmental Microbiology, 2014, 80, 4745-4756.	1.4	50
23	Error analysis in predictive modelling demonstrated on mould data. International Journal of Food Microbiology, 2014, 170, 78-82.	2.1	14
24	Next generation of predictive models. , 2013, , 498-515.		3
25	La microbiologia predittiva tra passato e futuro. Food, 2013, , 1-14.	0.0	0
26	Does proximity to neighbours affect germination of spores of non-proteolytic Clostridium botulinum?. Food Microbiology, 2012, 32, 104-109.	2.1	10
27	Lag Phase Is a Distinct Growth Phase That Prepares Bacteria for Exponential Growth and Involves Transient Metal Accumulation. Journal of Bacteriology, 2012, 194, 686-701.	1.0	462
28	Predictive modelling of Salmonella: From cell cycle measurements to e-models. Food Research International, 2012, 45, 852-862.	2.9	14
29	Effect of periodic fluctuation in the osmotic environment on the adaptation of Salmonella. Food Microbiology, 2012, 30, 298-302.	2.1	6
30	Modelling osmotic stress by Flux Balance Analysis at the genomic scale. International Journal of Food Microbiology, 2012, 152, 123-128.	2.1	12
31	Complexity of the International Agro-Food Trade Network and Its Impact on Food Safety. PLoS ONE, 2012, 7, e37810.	1.1	125
32	In vivo and in silico determination of essential genes of Campylobacter jejuni. BMC Genomics, 2011, 12, 535.	1.2	54
33	Lag Phase of <i>Salmonella enterica</i> under Osmotic Stress Conditions. Applied and Environmental Microbiology, 2011, 77, 1758-1762.	1.4	28
34	Modeling the Effect of Abrupt Acid and Osmotic Shifts within the Growth Region and across Growth Boundaries on Adaptation and Growth of <i>Listeria monocytogenes</i>. Applied and Environmental Microbiology, 2010, 76, 6555-6563.	1.4	12
35	Network analysis of the transcriptional pattern of young and old cells of Escherichia coli during lag phase. BMC Systems Biology, 2009, 3, 108.	3.0	28
36	Parameter estimation for the distribution of single cell lag times. Journal of Theoretical Biology, 2009, 259, 24-30.	0.8	41

#	Article	IF	Citations
37	Modelling the photosensitization-based inactivation of<i>Bacillus cereus</i>. Journal of Applied Microbiology, 2009, 107, 1006-1011.	1.4	30
38	Effect of microbial cell-free meat extract on the growth of spoilage bacteria. Journal of Applied Microbiology, 2009, 107, 1819-1829.	1.4	23
39	Modelling the growth of Clostridium perfringens during the cooling of bulk meat. International Journal of Food Microbiology, 2008, 128, 41-50.	2.1	42
40	Effect of capric, lauric and Î±-linolenic acids on the division time distributions of single cells of Staphylococcus aureus. International Journal of Food Microbiology, 2008, 128, 122-128.	2.1	24
41	Modeling the Variability of Single-Cell Lag Times for <i>Listeria innocua</i> Populations after Sublethal and Lethal Heat Treatments. Applied and Environmental Microbiology, 2008, 74, 6949-6955.	1.4	43
42	Single-Cell and Population Lag Times as a Function of Cell Age. Applied and Environmental Microbiology, 2008, 74, 2534-2536.	1.4	56
43	Predictions under Isothermal and Dynamically Changing Conditions. Applied and Environmental Microbiology, 2007, 73, 2402-2403.	1.4	0
44	The effect of reuterin on the lag time of single cells of Listeria innocua grown on a solid agar surface at different pH and NaCl concentrations. International Journal of Food Microbiology, 2007, 113, 35-40.	2.1	34
45	Computational Tools in Predictive Microbiology. ACS Symposium Series, 2006, , 252-257.	0.5	0
46	Comparison of different approaches for comparative genetic analysis using microarray hybridization. Applied Microbiology and Biotechnology, 2006, 72, 852-859.	1.7	12
47	Information systems in food safety management. International Journal of Food Microbiology, 2006, 112, 181-194.	2.1	175
48	Kinetics of Single Cells: Observation and Modeling of a Stochastic Process. Applied and Environmental Microbiology, 2006, 72, 2163-2169.	1.4	88
49	Use of Optical Density Detection Times To Assess the Effect of Acetic Acid on Single-Cell Kinetics. Applied and Environmental Microbiology, 2006, 72, 6674-6679.	1.4	46
50	Using the ComBase database and associated software tools to predict microbial responses to food environments. Food Manufacturing Efficiency, 2006, 1, 9-13.	0.3	2
51	Connection between stochastic and deterministic modelling of microbial growth. Journal of Theoretical Biology, 2005, 232, 285-299.	0.8	56
52	Methods to determine the growth domain in a multidimensional environmental space. International Journal of Food Microbiology, 2005, 100, 3-12.	2.1	55
53	Modelling the variability of lag times and the first generation times of single cells of. International Journal of Food Microbiology, 2005, 100, 13-19.	2.1	73
54	Stochastic modelling of individual cell growth using flow chamber microscopy images. International Journal of Food Microbiology, 2005, 105, 177-190.	2.1	41

#	Article	IF	Citations
55	Quantitative Microbial Ecology of Food. Acta Alimentaria, 2005, 34, 335-337.	0.3	5
56	Mechanistic modelling of pathogen stress response. , 2005, , 53-77.		0
57	ComBase: A Common Database on Microbial Responses to Food Environments. Journal of Food Protection, 2004, 67, 1967-1971.	0.8	202
58	Analysis and Validation of a Predictive Model for Growth and Death of Aeromonas hydrophila under Modified Atmospheres at Refrigeration Temperatures. Applied and Environmental Microbiology, 2004, 70, 3925-3932.	1.4	11
59	Observing Growth and Division of Large Numbers of Individual Bacteria by Image Analysis. Applied and Environmental Microbiology, 2004, 70, 675-678.	1.4	127
60	Distribution of turbidity detection times produced by single cell-generated bacterial populations. Journal of Microbiological Methods, 2003, 55, 821-827.	0.7	71
61	Analysing the lagâ€“growth rate relationship of Yersinia enterocolitica. International Journal of Food Microbiology, 2002, 73, 197-201.	2.1	31
62	Stochastic modelling of bacterial lag phase. International Journal of Food Microbiology, 2002, 73, 203-206.	2.1	107
63	RESPONSE TO THE LETTER BY DRS DAVEY, THOMAS AND CERF. Journal of Applied Microbiology, 2001, 90, 149-150.	1.4	0
64	A Parallel Study on Bacterial Growth and Inactivation. Journal of Theoretical Biology, 2001, 210, 327-336.	0.8	65
65	A predictive model of growth from spores of non-proteolytic Clostridium botulinum in the presence of different CO2concentrations as influenced by chill temperature, pH and NaCl. Food Microbiology, 2001, 18, 453-461.	2.1	28
66	Applying a generalized z -value concept to quantify and compare the effect of environmental factors on the growth of Listeria monocytogenes. Food Microbiology, 2001, 18, 539-545.	2.1	14
67	Measurements and predictions of growth for Listeria monocytogenes and Salmonella during fluctuating temperature. International Journal of Food Microbiology, 2001, 67, 131-137.	2.1	53
68	The effect of inoculum size on the lag phase of Listeria monocytogenes. International Journal of Food Microbiology, 2001, 70, 163-173.	2.1	150
69	Modelling microbiological safety. , 2001, , 383-401.		8
70	Predictive model for the growth of Yersinia enterocolitica under modified atmospheres. Journal of Applied Microbiology, 2000, 88, 521-530.	1.4	33
71	Predictions of growth for Listeria monocytogenes and Salmonella during fluctuating temperature. International Journal of Food Microbiology, 2000, 59, 157-165.	2.1	78
72	Adding new factors to predictive models: the effect on the risk of extrapolation. Food Microbiology, 2000, 17, 367-374.	2.1	24

#	Article	IF	Citations
73	Growth/no growth interface of Brochothrix thermosphacta as a function of pH and water activity. Food Microbiology, 2000, 17, 485-493.	2.1	61
74	Estimating Bacterial Growth Parameters by Means of Detection Times. Applied and Environmental Microbiology, 1999, 65, 732-736.	1.4	122
75	Validating predictive models of food spoilage organisms. Journal of Applied Microbiology, 1999, 87, 491-499.	1.4	79
76	Predicting fungal growth: the effect of water activity on Penicillium roqueforti. International Journal of Food Microbiology, 1999, 47, 141-146.	2.1	49
77	Validating and comparing predictive models. International Journal of Food Microbiology, 1999, 48, 159-166.	2.1	297
78	PREDICTIVE MICROBIOLOGY AND FOOD SAFETY. , 1999, , 1699-1710.		9
79	Predictive models as means to quantify the interactions of spoilage organisms. International Journal of Food Microbiology, 1998, 41, 59-72.	2.1	94
80	Comparison of Stochastic and Deterministic Concepts of Bacterial Lag. Journal of Theoretical Biology, 1998, 192, 403-408.	0.8	159
81	A STOCHASTIC APPROACH TO MODELLING BACTERIAL LAG. Acta Horticulturae, 1998, , 167-170.	0.1	0
82	Simple is good as long as it is enough. Food Microbiology, 1997, 14, 189-192.	2.1	28
83	Predictive models as means of measuring the relatedness of someAspergillusspecies. Food Microbiology, 1997, 14, 347-351.	2.1	12
84	Simple is good as long as it is enough. Food Microbiology, 1997, 14, 391-394.	2.1	21
85	Effects of parameterization on the performance of empirical models used in `predictive microbiology'. Food Microbiology, 1996, 13, 83-91.	2.1	126
86	A Combined Model for Growth and Subsequent Thermal Inactivation of Brochothrix thermosphacta. Applied and Environmental Microbiology, 1996, 62, 1029-1035.	1.4	64
87	A response surface study on the role of some environmental factors affecting the growth of Saccharomyces cerevisiae. International Journal of Food Microbiology, 1995, 25, 63-74.	2.1	37
88	Mathematics of predictive food microbiology. International Journal of Food Microbiology, 1995, 26, 199-218.	2.1	382
89	Predicting growth of Brochothrix thermosphacta at changing temperature. International Journal of Food Microbiology, 1995, 27, 61-75.	2.1	209
90	A dynamic approach to predicting bacterial growth in food. International Journal of Food Microbiology, 1994, 23, 277-294.	2.1	2,135

#	Article	IF	Citations
91	Predicting fungal growth: the effect of water activity on Aspergillus flavus and related species. International Journal of Food Microbiology, 1994, 23, 419-431.	2.1	190
92	Recovery of heat-injured Listeria monocytogenes. International Journal of Food Microbiology, 1994, 22, 227-237.	2.1	40
93	A predictive model for the combined effect of pH, sodium chloride and storage temperature on the growth of Brochothrix thermosphacta. International Journal of Food Microbiology, 1993, 19, 161-178.	2.1	124
94	A non-autonomous differential equation to modelbacterial growth. Food Microbiology, 1993, 10, 43-59.	2.1	460
95	Modeling bacterial growth responses. Journal of Industrial Microbiology, 1993, 12, 190-194.	0.9	53
96	Some properties of a nonautonomous deterministic growth model describing the adjustment of the bacterial population to a new environment. Mathematical Medicine and Biology, 1993, 10, 293-299.	0.8	26
97	Notes on reparameterization of bacterial growth curves. Food Microbiology, 1992, 9, 169-171.	2.1	11
98	A terminology for models in predictive microbiologyâ€"a reply to K.R. Davey. Food Microbiology, 1992, 9, 355-356.	2.1	11
99	Notes on reparameterization of bacterial growth curves II. Food Microbiology, 1992, 9, 265-267.	2.1	4
100	A back-step algorithm for simulation of Monod-type models. Bioinformatics, 1991, 7, 399-401.	1.8	0
101	Roles of Alternative Sigma Factors in Invasion and Growth Characteristics of Listeria monocytogenes 10403S Into Human Epithelial Colorectal Adenocarcinoma Caco-2 Cell. Frontiers in Microbiology, 0, 13, .	1.5	1
