

Christopher B Whitehead

List of Publications by Citations

Source: <https://exaly.com/author-pdf/1616745/christopher-b-whitehead-publications-by-citations.pdf>

Version: 2024-04-24

This document has been generated based on the publications and citations recorded by exaly.com. For the latest version of this publication list, visit the link given above.

The third column is the impact factor (IF) of the journal, and the fourth column is the number of citations of the article.

#	Paper	IF	Citations
10	LaMer's 1950 Model for Particle Formation of Instantaneous Nucleation and Diffusion-Controlled Growth: A Historical Look at the Model's Origins, Assumptions, Equations, and Underlying Sulfur Sol Formation Kinetics Data. <i>Chemistry of Materials</i> , 2019 , 31, 7116-7132	9.6	60
9	Mechanism-Enabled Population Balance Modeling of Particle Formation en Route to Particle Average Size and Size Distribution Understanding and Control. <i>Journal of the American Chemical Society</i> , 2019 , 141, 15827-15839	16.4	29
8	LaMer's 1950 model of particle formation: a review and critical analysis of its classical nucleation and fluctuation theory basis, of competing models and mechanisms for phase-changes and particle formation, and then of its application to silver halide, semiconductor, metal, and metal-oxide nanoparticles. <i>Materials Advances</i> , 2021 , 2, 161-227	3.3	20
7	Particle Size Distributions via Mechanism-Enabled Population Balance Modeling. <i>Journal of Physical Chemistry C</i> , 2020 , 124, 4852-4880	3.8	19
6	Nucleation Kinetics and Molecular Mechanism in Transition-Metal Nanoparticle Formation: The Intriguing, Informative Case of a Bimetallic Precursor, $\{[(1,5\text{-COD})\text{Ir}(\text{HPO}_4)_2]_2\}$ <i>Chemistry of Materials</i> , 2019 , 31, 2848-2862	9.6	13
5	Response to Particle Size Is a Primary Determinant for Sigmoidal Kinetics of Nanoparticle Formation: A Disproof of the Finke-Watzky (F-W) Nanoparticle Nucleation and Growth Mechanism <i>Chemistry of Materials</i> , 2020 , 32, 3657-3672	9.6	13
4	Burst Nucleation vs Autocatalytic, Burst Growth in Near-Monodisperse Particle-Formation Reactions. <i>Journal of Physical Chemistry C</i> , 2020 , 124, 24543-24554	3.8	8
3	Particle formation mechanisms supported by in situ synchrotron XAFS and SAXS studies: a review of metal, metal-oxide, semiconductor and selected other nanoparticle formation reactions. <i>Materials Advances</i> ,	3.3	7
2	Nanoparticle Formation Kinetics, Mechanisms, and Accurate Rate Constants: Examination of a Second-Generation Ir(0) _n Particle Formation System by Five Monitoring Methods Plus Initial Mechanism-Enabled Population Balance Modeling. <i>Journal of Physical Chemistry C</i> , 2021 , 125, 13449-13476	3.8	4
1	Estimating reaction parameters in mechanism-enabled population balance models of nanoparticle size distributions: A Bayesian inverse problem approach. <i>Journal of Computational Chemistry</i> , 2022 , 43, 43-56	3.5	2
