| 1  | Aerogels "Airy Materials: Chemistry, Structure, and Properties. Angewandte Chemie - International Edition, 1998, 37, 22-45.                                                                                                                                                                                                                                                                                                                                          | 13.8 | 1,341     |
| 2  | Hybrid Inorganic-Organic Materials by Sol-Gel Processing of Organofunctional Metal Alkoxides. Chemistry of Materials, 1995, 7, 2010-2027.                                                                                                                                                                                                                                                                                                                            | 6.7  | 892       |
| 3  | Surface Modification and Functionalization of Metal and Metal Oxide Nanoparticles by Organic Ligands. Monatshefte für Chemie, 2008, 139, 183-195.                                                                                                                                                                                                                                                                                                                    | 1.8  | 448       |
| 4  | σ <sup>2</sup> Coordination of Si-H Bonds to Transition Metals. Advances in Organometallic Chemistry, 1990, 30, 151-187.                                                                                                                                                                                                                                                                                                                                             | 1.0  | 332       |
| 5  | Chemical modification of titanium alkoxides for sol-gel processing. Journal of Materials Chemistry, 2005, 15, 3701.                                                                                                                                                                                                                                                                                                                                                  | 6.7  | 304       |
| 6  | Cluster-based inorganic-organic hybrid materials. Chemical Society Reviews, 2011, 40, 575-582.                                                                                                                                                                                                                                                                                                                                                                       | 38.1 | 255       |
| 7  | Polymers Reinforced by Covalently Bonded Inorganic Clusters. Chemistry of Materials, 2001, 13, 3487-3494.                                                                                                                                                                                                                                                                                                                                                            | 6.7  | 211       |
| 8  | Metal complexes in inorganic matrixes. 7. Nanometer-sized, uniform metal particles in a silica matrix by sol-gel processing of metal complexes. Chemistry of Materials, 1991, 3, 559-566.                                                                                                                                                                                                                                                                            | 6.7  | 209       |
| 9  | Oxozirconium Methacrylate Clusters: Zr <sub>6</sub> (OH) <sub>4</sub> O <sub>4</sub> (OMc) <sub>12</sub> and Zr <sub>4</sub> O <sub>2</sub> (OMc) <sub>12</sub> (OMc = Methacrylate). Chemische Berichte, 1997, 130, 473-478.                                                                                                                                                                                                                                        | 0.2  | 183       |
| 10 | Primary hydrolysis products of methacrylate-modified titanium and zirconium alkoxides. Chemistry of Materials, 1992, 4, 291-295.                                                                                                                                                                                                                                                                                                                                     | 6.7  | 148       |
| 11 | Gold-Komplexe von Diphosphinomethanen, II. Synthese und Kristallstruktur achtgliedriger Ringverbindungen von Gold(I) mit Au-Au-Wechselwirkung. Chemische Berichte, 1977, 110, 2751-2757.                                                                                                                                                                                                                                                                             | 0.2  | 137       |
| 12 | Formation and Structure of Gel Networks from Si(OEt) <sub>4</sub> /(MeO) <sub>3</sub> Si(CH <sub>2</sub> ) <sub>3</sub> NR <sub>2</sub> Mixtures (NR <sub>2</sub> = NH <sub>2</sub> or Tj ETQq 0 0 0 rgBT / Overlock 130                                                                                                                                                                                                                                             | 6.7  | 130       |
| 13 | Variations in capping the Zr <sub>6</sub> O <sub>4</sub> (OH) <sub>4</sub> cluster core: X-ray structure analyses of [Zr <sub>6</sub> (OH) <sub>4</sub> O <sub>4</sub> (OOCâ€“CH <sub>2</sub> ...CH <sub>2</sub> ) <sub>10</sub> ] <sub>2</sub> (1/4-OOCâ€“CH <sub>2</sub> ...CH <sub>2</sub> ) <sub>4</sub> and Zr <sub>6</sub> (OH) <sub>4</sub> O <sub>4</sub> (OOCR) <sub>12</sub> (PrOH) (R=Ph, CMe=CH <sub>2</sub> ). Inorganica Chimica Acta, 1999, 284, 1-7. |      | 129       |
| 14 | Hydrophobic aerogels from Si(OMe) <sub>4</sub> /MeSi(OMe) <sub>3</sub> mixtures. Journal of Non-Crystalline Solids, 1992, 145, 85-89.                                                                                                                                                                                                                                                                                                                                | 3.1  | 128       |
| 15 | Organically Modified Transition Metal Alkoxides: Chemical Problems and Structural Issues on the Way to Materials Syntheses. Accounts of Chemical Research, 2007, 40, 730-737.                                                                                                                                                                                                                                                                                        | 15.6 | 116       |
| 16 | Can the Clusters Zr <sub>6</sub> O <sub>4</sub> (OH) <sub>4</sub> (OOCR) <sub>12</sub> and [Zr <sub>6</sub> O <sub>4</sub> (OH) <sub>4</sub> (OOCR) <sub>12</sub> ] <sub>2</sub> Be Converted into Each Other?. European Journal of Inorganic Chemistry, 2006, 2006, 3283-3293.                                                                                                                                                                                      | 2.0  | 107       |
| 17 | Evaluation of the anti-corrosive effect of acid pickling and sol-gel coating on magnesium AZ31 alloy. Corrosion Science, 2007, 49, 3015-3023.                                                                                                                                                                                                                                                                                                                        | 6.6  | 107       |
| 18 | Formation and Structure of Porous Gel Networks from Si(OMe) <sub>4</sub> in the Presence of A(CH <sub>2</sub> ) <sub>n</sub> Si(OR) <sub>3</sub> (A) Tj ETQq 0 0 0 rgBT / Overlock 10 T                                                                                                                                                                                                                                                                              | 6.7  | 97        |
