#	ARTICLE	IF	CITATIONS
1	Exercise protocols: The gap between preclinical and clinical exercise oncology studies. <i>Metabolism Open</i> , 2022, 13, 100165.	2.9	1
2	The effect of 10 weeks endurance training on protein levels of NF-kB and gene expression of Atrogin-1 and MuRF-1 in cardiac myocytes of female. <i>Medical Journal of Tabriz University of Medical Sciences & Health Services</i> , 2021, 43, 134-141.	0.1	1
3	The effects of eight weeks high intensity interval training on the levels of endothelial nitric oxide synthase (eNOS) gene expression in left ventricle of type 2 diabetic rats. <i>Medical Journal of Tabriz University of Medical Sciences & Health Services</i> , 2021, 43, 100-107.	0.1	1
4	Protective effects of HIIT vs. CET exercise training on high-fat-high-fructose diet-induced hyperglycemia, hyperlipidemia, and histopathology of liver in rats: regulation of SIRT1/PGC-1 β . <i>Sport Sciences for Health</i> , 2021, 17, 707-715.	1.3	1
5	Exercise training and probiotic supplementation effects on skeletal muscle apoptosis prevention in type-1 TM diabetic rats. <i>Life Sciences</i> , 2021, 285, 119973.	4.3	1
6	High-intensity interval training (HIIT) effectively enhances heart function via miR-195 dependent cardiomyopathy reduction in high-fat high-fructose diet-induced diabetic rats. <i>Archives of Physiology and Biochemistry</i> , 2020, 126, 250-257.	2.1	16
7	High-intensity interval training (HIIT) alleviated NAFLD feature via miR-122 induction in liver of high-fat high-fructose diet induced diabetic rats. <i>Archives of Physiology and Biochemistry</i> , 2020, 126, 242-249.	2.1	23
8	High-Intensity Interval Training Reversed High-Fat Diet-Induced M1-Macrophage Polarization in Rat Adipose Tissue via Inhibition of NOTCH Signaling. <i>Journal of Inflammation Research</i> , 2020, Volume 13, 165-174.	3.5	10
9	High intensity interval training improves diabetic cardiomyopathy via miR-1 dependent suppression of cardiomyocyte apoptosis in diabetic rats. <i>Journal of Diabetes and Metabolic Disorders</i> , 2020, 19, 145-152.	1.9	6
10	Effects of 10 week continuous endurance training on angiotensin-1 gene expression and the tie2 protein in mice with breast cancer. <i>Medical Journal of Tabriz University of Medical Sciences & Health Services</i> , 2019, 41, 7-13.	0.1	0
11	Aerobic endurance training improves nonalcoholic fatty liver disease (NAFLD) features via miR-33 dependent autophagy induction in high fat diet fed mice. <i>Obesity Research and Clinical Practice</i> , 2018, 12, 80-89.	1.8	52
12	Upregulation of Ryanodine Receptor Calcium Channels (RyR2) in Rats with Induced Diabetes after 4 Weeks of High Intensity Interval Training. <i>International Cardiovascular Research Journal</i> , 2016, 10, 1-5.	0.2	2
13	The immunomodulatory effects of fish-oil supplementation in elite paddlers: A pilot randomized double blind placebo-controlled trial. <i>Prostaglandins Leukotrienes and Essential Fatty Acids</i> , 2015, 99, 35-40.	2.2	9
