MADTINLUKAC

| #  | Article                                                                                                                                                                                          | IF  | CITATIONS |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 1  | On Distinguishing Sequences of Several Classes of Reversible Finite State Machines. , 2021, , .                                                                                                  |     | 0         |
| 2  | Optimization of LNN Reversible Circuits Using an Analytic Sifting Method. Journal of Circuits, Systems and Computers, 2021, 30, 2150166.                                                         | 1.5 | 0         |
| 3  | Repurposing potential of posaconazole and grazoprevir as inhibitors of SARS-CoV-2 helicase.<br>Scientific Reports, 2021, 11, 10290.                                                              | 3.3 | 16        |
| 4  | Selecting Algorithms Without Meta-features. Lecture Notes in Computer Science, 2021, , 607-621.                                                                                                  | 1.3 | 0         |
| 5  | Evaluation of Pseudo-Random Number Generation on GPU Cards. Computation, 2021, 9, 142.                                                                                                           | 2.0 | 5         |
| 6  | Geometric Refactoring of Quantum and Reversible Circuits: Quantum Layout. , 2020, , .                                                                                                            |     | 0         |
| 7  | Using homing, synchronizing and distinguishing input sequences for the analysis of reversible finite state machines. Facta Universitatis - Series Electronics and Energetics, 2019, 32, 417-438. | 0.9 | 1         |
| 8  | An analytic sifting approach to optimization of LNN reversible circuits. , 2017, , .                                                                                                             |     | 4         |
| 9  | Study of GPU Acceleration in Genetic Algorithms for Quantum Circuit Synthesis. , 2017, , .                                                                                                       |     | 1         |
| 10 | Reasoning and algorithm selection augmented symbolic segmentation. , 2017, , .                                                                                                                   |     | 0         |
| 11 | Context based visual content verification. , 2017, , .                                                                                                                                           |     | 0         |
| 12 | Quantum Algorithmic Complexity of Three-Qubit Pure States. , 2016, , .                                                                                                                           |     | 0         |
| 13 | Threat detection in episodic images. , 2016, , .                                                                                                                                                 |     | 0         |
| 14 | High-level verification of multi-object segmentation. , 2016, , .                                                                                                                                |     | 2         |
| 15 | Evaluation of algorithm selection approach for semantic segmentation based on high-level information feedback. , 2015, , .                                                                       |     | 1         |
| 16 | Analysis of Reversible and Quantum Finite State Machines Using Homing, Synchronizing and Distinguishing Input Sequences. , 2013, , .                                                             |     | 2         |
| 17 | Decomposition of reversible logic function based on cube-reordering. Facta Universitatis - Series Electronics and Energetics, 2011, 24, 403-422.                                                 | 0.9 | 7         |
