#	Article	IF	Citations
1	Birth weight and blood pressure: cross sectional and longitudinal relations in childhood. BMJ: British Medical Journal, 1995, 311, 773-776.	2.3	139
2	Elevated Parathyroid Hormone, But Not Vitamin D Deficiency, Is Associated With Increased Risk of Heart Failure in Older Men With and Without Cardiovascular Disease. Circulation: Heart Failure, 2014, 7, 732-739.	3.9	75
3	Cross-sectional associations of objectively measured physical activity and sedentary time with sarcopenia and sarcopenic obesity in older men. Preventive Medicine, 2016, 91, 264-272.	3.4	75
4	Copeptin, Insulin Resistance, and Risk of Incident Diabetes in Older Men. Journal of Clinical Endocrinology and Metabolism, 2015, 100, 3332-3339.	3.6	65
5	Ability of Self-Reported Frailty Components to Predict Incident Disability, Falls, and All-Cause Mortality: Results From a Population-Based Study of Older British Men. Journal of the American Medical Directors Association, 2017, 18, 152-157.	2.5	64
6	Cardiovascular risk factors in British children from towns with widely differing adult cardiovascular mortality. BMJ: British Medical Journal, 1996, 313, 79-84.	2.3	55
7	Cohort Profile Update: The British Regional Heart Study 1978–2014: 35 years follow-up of cardiovascular disease and ageing. International Journal of Epidemiology, 2015, 44, 826-826g.	1.9	53
8	The relationships between body composition characteristics and cognitive functioning in a population-based sample of older British men. BMC Geriatrics, 2015, 15, 172.	2.7	50
9	Lung function and airway obstruction: associations with circulating markers of cardiac function and incident heart failure in older men—the British Regional Heart Study. Thorax, 2016, 71, 526-534.	5.6	48
10	Nâ€terminal pro brain natriuretic peptide but not copeptin improves prediction of heart failure over other routine clinical risk parameters in older men with and without cardiovascular disease: populationâ€based study. European Journal of Heart Failure, 2014, 16, 25-32.	7.1	46
11	Serum uric acid as a potential marker for heart failure risk in men on antihypertensive treatment: The British Regional Heart Study. International Journal of Cardiology, 2018, 252, 187-192.	1.7	34
12	Physical frailty in older men: prospective associations with diet quality and patterns. Age and Ageing, 2019, 48, 355-360.	1.6	34
13	Prediction of Cardiovascular Disease Risk by Cardiac Biomarkers in 2 United Kingdom Cohort Studies. Hypertension, 2016, 67, 309-315.	2.7	33
14	Body mass index in early and middle adult life: prospective associations with myocardial infarction, stroke and diabetes over a 30-year period: the British Regional Heart Study. BMJ Open, 2015, 5, e008105.	1.9	31
15	Trajectories of self-reported physical activity and predictors during the transition to old age: a 20-year cohort study of British men. International Journal of Behavioral Nutrition and Physical Activity, 2018, 15, 14.	4.6	29
16	Copeptin and the risk of incident stroke, CHD and cardiovascular mortality in older men with and without diabetes: The British Regional Heart Study. Diabetologia, 2016, 59, 1904-1912.	6.3	26
17	Healthier diet quality and dietary patterns are associated with lower risk of mobility limitation in older men. European Journal of Nutrition, 2019, 58, 2335-2343.	3.9	22
18	Self-reported sleep duration and napping, cardiac risk factors and markers of subclinical vascular disease: cross-sectional study in older men. BMJ Open, 2017, 7, e016396.	1.9	20

#	Article	IF	CITATIONS
19	Associations between blood coagulation markers, NT-proBNP and risk of incident heart failure in older men: The British Regional Heart Study. International Journal of Cardiology, 2017, 230, 567-571.	1.7	19
20	Circulating soluble receptor for advanced glycation end product: Cross-sectional associations with cardiac markers and subclinical vascular disease in older men with and without diabetes. Atherosclerosis, 2017, 264, 36-43.	0.8	16
21	Adiposity in Early, Middle and Later Adult Life and Cardiometabolic Risk Markers in Later Life; Findings from the British Regional Heart Study. PLoS ONE, 2014, 9, e114289.	2.5	15
22	Association between physical activity levels in mid-life with physical activity in old age: a 20-year tracking study in a prospective cohort. BMJ Open, 2017, 7, e017378.	1.9	12
23	High-Sensitivity Troponin T and Incident Heart Failure in Older Men: British Regional Heart Study. Journal of Cardiac Failure, 2019, 25, 230-237.	1.7	11
24	Inflammatory markers and incident heart failure in older men: the role of NT-proBNP. Biomarkers in Medicine, 2021, 15, 413-425.	1.4	9
25	Twenty-Year Trajectories of Physical Activity Types from Midlife to Old Age. Medicine and Science in Sports and Exercise, 2019, 51, 481-489.	0.4	8
26	Associations of the systolic and diastolic components of orthostatic hypotension with markers of cardiovascular risk in older men: A crossâ€sectional analysis from The British Regional Heart Study. Journal of Clinical Hypertension, 2020, 22, 1892-1901.	2.0	7
27	Frailty and incident heart failure in older men: the British Regional Heart Study. Open Heart, 2021, 8, e001571.	2.3	7
28	Arterial pathophysiology and comparison of two devices for pulse wave velocity assessment in elderly men: the British regional heart study. Open Heart, 2017, 4, e000645.	2.3	6
29	Tracking of sport and exercise types from midlife to old age: a 20-year cohort study of British men. European Review of Aging and Physical Activity, 2018, 15, 16.	2.9	3
30	Vitamin D deficiency, impaired lung function and total and respiratory mortality in a cohort of older men: cross-sectional and prospective findings from The British Regional Heart Study. BMJ Open, 2021, 11, e051560.	1.9	3
31	Excessive Orthostatic Changes in Blood Pressure Are Associated With Incident Heart Failure in Older Men. Hypertension, 2021, 77, 1481-1489.	2.7	2
32	Cohort Profile Update: The British Regional Heart Study 1978–2018: 40 years of follow-up of older British men. International Journal of Epidemiology, 2023, 52, e187-e194.	1.9	2
