#	ARTICLE	IF	CITATIONS
1	Prospective associations between socio-economic status and dietary patterns in European children: the Identification and Prevention of Dietary- and Lifestyle-induced Health Effects in Children and Infants (IDEFICS) Study. <i>British Journal of Nutrition</i> , 2015, 113, 517-525.	1.2	62
2	Associations between social vulnerabilities and dietary patterns in European children: the Identification and prevention of Dietary- and lifestyle-induced health Effects In Children and infantS (IDEFICS) study. <i>British Journal of Nutrition</i> , 2016, 116, 1288-1297.	1.2	31
3	Desaturase Activity Is Associated With Weight Status and Metabolic Risk Markers in Young Children. <i>Journal of Clinical Endocrinology and Metabolism</i> , 2015, 100, 3760-3769.	1.8	27
4	Prospective associations between social vulnerabilities and children's weight status. Results from the IDEFICS study. <i>International Journal of Obesity</i> , 2018, 42, 1691-1703.	1.6	27
5	Prospective associations between socioeconomically disadvantaged groups and metabolic syndrome risk in European children. Results from the IDEFICS study. <i>International Journal of Cardiology</i> , 2018, 272, 333-340.	0.8	26
6	Cross-sectional and longitudinal associations between psychosocial well-being and sleep in European children and adolescents. <i>Journal of Sleep Research</i> , 2019, 28, e12783.	1.7	25
7	Prospective associations between dietary patterns and body composition changes in European children: the IDEFICS study. <i>Public Health Nutrition</i> , 2017, 20, 3257-3265.	1.1	24
8	Social vulnerability as a predictor of physical activity and screen time in European children. <i>International Journal of Public Health</i> , 2018, 63, 283-295.	1.0	24
9	Metabolic status in children and its transitions during childhood and adolescence: the IDEFICS/I.Family study. <i>International Journal of Epidemiology</i> , 2019, 48, 1673-1683.	0.9	21
10	The role of lifestyle and non-modifiable risk factors in the development of metabolic disturbances from childhood to adolescence. <i>International Journal of Obesity</i> , 2020, 44, 2236-2245.	1.6	17
11	The role of a FADS1 polymorphism in the association of fatty acid blood levels, BMI and blood pressure in young children: Analyses based on path models. <i>PLoS ONE</i> , 2017, 12, e0181485.	1.1	16
12	Associations between social vulnerabilities and psychosocial problems in European children. Results from the IDEFICS study. <i>European Child and Adolescent Psychiatry</i> , 2017, 26, 1105-1117.	2.8	15
13	Associations between sleep duration and insulin resistance in European children and adolescents considering the mediating role of abdominal obesity. <i>PLoS ONE</i> , 2020, 15, e0235049.	1.1	15
14	Socioeconomically Disadvantaged Groups and Metabolic Syndrome in European Adolescents: The HELENA Study. <i>Journal of Adolescent Health</i> , 2021, 68, 146-154.	1.2	13
15	Associations of Whole Blood n-3 and n-6 Polyunsaturated Fatty Acids with Blood Pressure in Children and Adolescents: Results from the IDEFICS/I.Family Cohort. <i>PLoS ONE</i> , 2016, 11, e0165981.	1.1	10
16	Associations Between Psychosocial Well-Being, Stressful Life Events and Emotion-Driven Impulsiveness in European Adolescents. <i>Journal of Youth and Adolescence</i> , 2022, 51, 1106-1117.	1.9	4
17	Associations of whole blood polyunsaturated fatty acids and insulin resistance among European children and adolescents. <i>European Journal of Pediatrics</i> , 2020, 179, 1647-1651.	1.3	3
18	Reply to "Letter to the editor: Issues to consider in children's dietary assessment" by T. Burrows and Erratum. <i>Clinical Nutrition</i> , 2014, 33, 727.	2.3	0
