#	Article	IF	CITATIONS
1	Selection for loss of tetracycline resistance by Escherichia coli. Journal of Bacteriology, 1981, 145, 1110-1111.	2.2	645
2	Comparative genomics of closely related salmonellae. Trends in Microbiology, 2002, 10, 94-99.	7.7	193
3	Salmonella enterica Serovar Typhi Possesses a Unique Repertoire of Fimbrial Gene Sequences. Infection and Immunity, 2001, 69, 2894-2901.	2.2	166
4	Genetic regulation of the glyoxylate shunt in Escherichia coli K-12. Journal of Bacteriology, 1982, 149, 173-180.	2.2	144
5	PutA protein, a membrane-associated flavin dehydrogenase, acts as a redox-dependent transcriptional regulator Proceedings of the National Academy of Sciences of the United States of America, 1993, 90, 4295-4298.	7.1	120
6	Barriers to recombination between closely related bacteria: MutS and RecBCD inhibit recombination between Salmonella typhimurium and Salmonella typhi. Proceedings of the National Academy of Sciences of the United States of America, 1997, 94, 9786-9791.	7.1	98
7	A role for Salmonella fimbriae in intraperitoneal infections. Proceedings of the National Academy of Sciences of the United States of America, 2000, 97, 1258-1262.	7.1	95
8	Elevated levels of glyoxylate shunt enzymes in Escherichia coli strains constitutive for fatty acid degradation. Journal of Bacteriology, 1980, 143, 720-725.	2.2	90
9	Regulation of proline utilization in Salmonella typhimurium: a membrane-associated dehydrogenase binds DNA in vitro. Journal of Bacteriology, 1991, 173, 211-219.	2.2	85
10	One Health and Food-Borne Disease: <i>Salmonella</i> Transmission between Humans, Animals, and Plants. Microbiology Spectrum, 2014, 2, OH-0020-2013.	3.0	78
11	Proposal of Cyclobacterium marinus gen. nov., comb. nov. for a Marine Bacterium Previously Assigned to the Genus Flectobacillus. International Journal of Systematic Bacteriology, 1990, 40, 337-347.	2.8	70
12	Inactivation of mismatch repair overcomes the barrier to transduction between Salmonella typhimurium and Salmonella typhi. Journal of Bacteriology, 1994, 176, 1527-1529.	2.2	68
13	Regulation of gene expression by repressor localization: biochemical evidence that membrane and DNA binding by the PutA protein are mutually exclusive. Journal of Bacteriology, 1997, 179, 2788-2791.	2.2	65
14	Autogenous regulation of gene expression. Journal of Bacteriology, 1993, 175, 307-316.	2.2	52
15	Role of gene fadR in Escherichia coli acetate metabolism. Journal of Bacteriology, 1981, 148, 83-90.	2.2	52
16	Proline Dehydrogenase Activity of the Transcriptional Repressor PutA Is Required for Induction of the put Operon by Proline (â^—). Journal of Biological Chemistry, 1995, 270, 9819-9827.	3.4	50
17	CheB is required for behavioural responses to negative stimuli during chemotaxis in Bacillus subtilis. Molecular Microbiology, 2000, 35, 44-57.	2.5	50
18	Regulation of proline utilization in Salmonella typhimurium: Molecular characterization of the put operon, and DNA sequence of the put control region. Molecular Genetics and Genomics, 1988, 213, 125-133.	2.4	49

#	Article	IF	CITATIONS
19	Regulation of proline utilization in enteric bacteria: cloning and characterization of the Klebsiella put control region. Journal of Bacteriology, 1991, 173, 783-790.	2.2	45
20	Role of bacteriophage-encoded exotoxins in the evolution of bacterial pathogens. Future Microbiology, 2011, 6, 1461-1473.	2.0	45
21	Increasing DNA Transfer Efficiency by Temporary Inactivation of Host Restriction. BioTechniques, 1999, 26, 892-900.	1.8	42
22	Protein phosphorylation on serine, threonine, and tyrosine residues modulates membrane-protein interactions and transcriptional regulation in Salmonella typhimurium Genes and Development, 1995, 9, 2034-2041.	5.9	41
23	Genomic Comparison of the Closely-Related Salmonella enterica Serovars Enteritidis, Dublin and Gallinarum. PLoS ONE, 2015, 10, e0126883.	2.5	39
24	MudSacI, a transposon with strong selectable and counterselectable markers: use for rapid mapping of chromosomal mutations in Salmonella typhimurium. Journal of Bacteriology, 1995, 177, 1383-1387.	2.2	37
25	The PutA Protein ofSalmonella typhimuriumCatalyzes the Two Steps of Proline Degradation via a Leaky Channel. Archives of Biochemistry and Biophysics, 1998, 354, 281-287.	3.0	36
26	Phylogenetic Placement of the Spirosomaceae. Systematic and Applied Microbiology, 1990, 13, 19-23.	2.8	35
27	Genomic Rearrangements at <i>rrn</i> Operons in Salmonella. Genetics, 2003, 165, 951-959.	2.9	35
28	One Health—Attaining Optimal Health for People, Animals, and the Environment. Microbe Magazine, 2010, 5, 383-389.	0.4	33
29	The era of microbiology: a golden phoenix. International Microbiology, 2006, 9, 1-7.	2.4	32
30	Survival in a cruel world: how Vibrio cholerae and Salmonella respond to an unwilling host Genes and Development, 1997, 11, 1761-1774.	5.9	31
31	Regulation of flavin dehydrogenase compartmentalization: requirements for PutA–membrane association in Salmonella typhimurium. Biochimica Et Biophysica Acta - Biomembranes, 1999, 1421, 5-18.	2.6	30
32	Transport of Phage P22 DNA across the Cytoplasmic Membrane. Journal of Bacteriology, 2009, 191, 135-140.	2.2	30
33	Isolation and characterization of Salmonella typhimurium glyoxylate shunt mutants. Journal of Bacteriology, 1987, 169, 3029-3034.	2.2	29
34	Proline transport in Salmonella typhimurium: putP permease mutants with altered substrate specificity. Journal of Bacteriology, 1986, 168, 590-594.	2.2	28
35	Chromosomal Rearrangements in Salmonella enterica Serovar Typhi Strains Isolated from Asymptomatic Human Carriers. MBio, 2011, 2, e00060-11.	4.1	27
36	Effect of mutS and recD Mutations on Salmonella Virulence. Infection and Immunity, 1999, 67, 6168-6172.	2.2	24

#	Article	IF	CITATIONS
37	An Open Letter to Elias Zerhouni. Science, 2005, 307, 1409c-1410c.	12.6	23
38	DNA sequence of theputAgene fromSalmonella typhimurium: a bifunctional membrane-associated dehydrogenase that binds DNA. Nucleic Acids Research, 1993, 21, 1676-1676.	14.5	22
39	A cryptic proline permease in Salmonella typhimurium. Microbiology (United Kingdom), 1997, 143, 2903-2911.	1.8	22
40	Mutations of putP that alter the lithium sensitivity of Salmonella typhimurium. Molecular Microbiology, 1988, 2, 749-755.	2.5	21
41	Macrophages influence Salmonella host-specificity in vivo. Microbial Pathogenesis, 2009, 47, 212-222.	2.9	21
42	Genomic analysis and growth-phase-dependent regulation of the SEF14 fimbriae of Salmonella enterica serovar Enteritidis The GenBank accession number for the sequence reported in this paper is AF239978 Microbiology (United Kingdom), 2001, 147, 2705-2715.	1.8	21
43	Integration host factor facilitates repression of the put operon in Salmonella typhimurium. Gene, 1992, 118, 13-19.	2.2	20
44	Acetohydroxy acid synthase I is required for isoleucine and valine biosynthesis by Salmonella typhimurium LT2 during growth on acetate or long-chain fatty acids. Journal of Bacteriology, 1987, 169, 917-919.	2.2	19
45	Sequence analysis of theicIRgene encoding the repressor of the acetate operon inSalmonella typhimurium. Nucleic Acids Research, 1990, 18, 3656-3656.	14.5	19
46	Pigeon-Associated Strains of Salmonella enterica Serovar Typhimurium Phage Type DT2 Have Genomic Rearrangements at rRNA Operons. Infection and Immunity, 2004, 72, 7338-7341.	2.2	18
47	Sodium-Coupled Cotransport. , 1990, , 203-224.		18
48	Regulation of proline utilization in Salmonella typhimurium: How do cells avoid a futile cycle?. Molecular Genetics and Genomics, 1990, 220, 492-494.	2.4	17
49	REGULATION OF THE <i>put</i> OPERON IN <i>SALMONELLA TYPHIMURIUM</i> : CHARACTERIZATION OF PROMOTER AND OPERATOR MUTATIONS. Genetics, 1986, 114, 687-703.	2.9	17
50	Rapid Approach To Determine rrn Arrangement in Salmonella Serovars. Applied and Environmental Microbiology, 2001, 67, 3295-3298.	3.1	16
51	Genetic Analysis, Using P22 Challenge Phage, of the Nitrogen Activator Protein DNA-Binding Site in the <i>Klebsiella aerogenes put</i> Operon. Journal of Bacteriology, 1998, 180, 571-577.	2.2	16
52	Family Spirosomaceae: Gram-Negative Ring-Forming Aerobic Bacteria. Critical Reviews in Microbiology, 1990, 17, 329-364.	6.1	14
53	DNA Sequence of theputPgene fromSalmonella typhimuriumand predicted structure of proline permease. Nucleic Acids Research, 1990, 18, 3057-3057.	14.5	13
54	Use of Operon and Gene Fusions to Study Gene Regulation in Salmonella. Methods in Enzymology, 2007, 421, 140-158.	1.0	12

#	Article	IF	CITATIONS
55	Chromosomal Rearrangements Formed by rrn Recombination Do Not Improve Replichore Balance in Host-Specific Salmonella enterica Serovars. PLoS ONE, 2010, 5, e13503.	2.5	12
56	Substrate recognition by proline permease in Salmonella. Amino Acids, 2001, 21, 161-174.	2.7	11
57	Reservoir of Bacterial Exotoxin Genes in the Environment. International Journal of Microbiology, 2010, 2010, 1-10.	2.3	11
58	Fitness Effects of Replichore Imbalance in <i>Salmonella enterica</i> . Journal of Bacteriology, 2010, 192, 6086-6088.	2.2	10
59	Dissecting the molecular mechanism of ion-solute cotransport: Substrate specificity mutations in theputP gene affect the kinetics of proline transport. Journal of Membrane Biology, 1991, 121, 201-214.	2.1	9
60	Bacteriophage-encoded shiga toxin gene in atypical bacterial host. Gut Pathogens, 2011, 3, 10.	3.4	9
61	The Future of One Health. Microbiology Spectrum, 2014, 2, OH-0018-2012.	3.0	9
62	Surrogate Genetics: The Use of Bacterial Hybrids as a Genetic Tool. Methods, 2000, 20, 73-79.	3.8	8
63	One Health and Food-Borne Disease: <i>Salmonella</i> Transmission between Humans, Animals, and Plants. , 0, , 137-148.		7
64	Activation of a new proline transport system in Salmonella typhimurium. Journal of Bacteriology, 1990, 172, 2940-2945.	2.2	6
65	Use of Antibioticâ€Resistant Transposons for Mutagenesis. Methods in Enzymology, 2007, 421, 11-17.	1.0	5
66	Inside or Outside: Detecting the Cellular Location of Bacterial Pathogens. BioTechniques, 2001, 30, 304-311.	1.8	4
67	The Role of Phage in the Adaptation of Bacteria to New Environmental Niches. Grand Challenges in Biology and Biotechnology, 2018, , 267-306.	2.4	4
68	Strain Collections and Genetic Nomenclature. Methods in Enzymology, 2007, 421, 3-8.	1.0	3
69	Genomic and Metagenomic Approaches for Predicting Pathogen Evolution. Microbiology Spectrum, 2014, 2, OH-0019-2013.	3.0	3
70	Opening doors for diverse talent in biotechnology with the BIO I-Corps experience. Nature Biotechnology, 2020, 38, 1099-1102.	17.5	3
71	The ASM Journals Committee Values the Contributions of Black Microbiologists. MBio, 2020, 11,	4.1	3
72	Computer programs for the rapid determination of enzyme kinetics on MS-DOS compatible microcomputers. Bioinformatics, 1990, 6, 63-65.	4.1	2

#	Article	IF	CITATIONS
73	Purification of a hexahistidine-tagged protein using L-histidine as the eluent. Technical Tips Online, 1998, 3, 54-55.	0.2	2
74	Use of P22 challenge phage to identify protein-nucleic acid binding sites. Technical Tips Online, 1998, 3, 111-119.	0.2	2
75	Dissecting Nucleic Acid–Protein Interactions Using Challenge Phage. Methods in Enzymology, 2007, 421, 227-249.	1.0	2
76	Mudâ€₽22. Methods in Enzymology, 2007, 421, 249-259.	1.0	2
77	The ASM Journals Committee Values the Contributions of Black Microbiologists. Journal of Microbiology and Biology Education, 2020, 21, .	1.0	2
78	Genome Rearrangements in Salmonella. , 0, , 41-48.		2
79	Eye of newt and toe of frog. Trends in Genetics, 1999, 15, 250.	6.7	1
80	Facile approach for constructing TEV insertions to probe protein structure in vivo. BioTechniques, 2006, 41, 721-724.	1.8	1
81	Localized Mutagenesis. Methods in Enzymology, 2007, 421, 42-50.	1.0	1
82	Isolation of Transposon Insertions. Methods in Enzymology, 2007, 421, 35-42.	1.0	1
83	Bacterial Genetics. , 2013, , 317-325.		1
