#	ARTICLE	IF	CITATIONS
1	Transcriptome-based insights into the regulatory role of immune-responsive circular RNAs in <i>Litopenaeus vannamei</i> upon WSSV infection. <i>Fish and Shellfish Immunology</i> , 2023, 132, 108499.	3.7	1
2	PmKuSPI is regulated by pmo-miR-bantam and contributes to hemocyte homeostasis and viral propagation in shrimp. <i>Fish and Shellfish Immunology</i> , 2023, 137, 108738.	3.7	3
3	DnaJC16, the molecular chaperone, is implicated in hemocyte apoptosis and facilitates of WSSV infection in shrimp. <i>Fish and Shellfish Immunology</i> , 2023, 137, 108770.	3.7	3
4	Peroxiredoxin-4 supplementation modulates the immune response, shapes the intestinal microbiome, and enhances AHPND resistance in <i>Penaeus vannamei</i> . <i>Fish and Shellfish Immunology</i> , 2023, 139, 108915.	3.7	1
5	Transcriptome profiling reveals the novel immunometabolism-related genes against WSSV infection from <i>Fenneropenaeus merguensis</i> . <i>Fish and Shellfish Immunology</i> , 2022, 120, 31-44.	3.7	8
6	Shrimp Vago5 activates an innate immune defense upon bacterial infection. <i>Fish and Shellfish Immunology</i> , 2022, 120, 122-132.	3.7	8
7	Shrimp pmo-miR-750 regulates the expression of sarcoplasmic calcium-binding protein facilitating virus infection in <i>Penaeus monodon</i> . <i>Fish and Shellfish Immunology</i> , 2022, 129, 74-84.	3.7	8
8	The interferon-like proteins, Vagos, in <i>Fenneropenaeus merguensis</i> elicit antimicrobial responses against WSSV and VPAHPND infection. <i>Fish and Shellfish Immunology</i> , 2022, 131, 718-728.	3.7	5
9	Regulation of shrimp prophenoloxidase activating system by lva-miR-4850 during bacterial infection. <i>Scientific Reports</i> , 2021, 11, 3821.	3.4	22
10	Cytotoxicity of <i>Vibrio parahaemolyticus</i> AHPND toxin on shrimp hemocytes, a newly identified target tissue, involves binding of toxin to aminopeptidase N1 receptor. <i>PLoS Pathogens</i> , 2021, 17, e1009463.	4.1	21
11	Editorial: Aquatic Invertebrate Immunity Against Infectious Diseases. <i>Frontiers in Immunology</i> , 2021, 12, 762082.	4.9	2
12	Host-derived circular RNAs display proviral activities in Hepatitis C virus-infected cells. <i>PLoS Pathogens</i> , 2020, 16, e1008346.	4.1	36
13	MicroRNA and mRNA interactions coordinate the immune response in non-lethal heat stressed <i>Litopenaeus vannamei</i> against AHPND-causing <i>Vibrio parahaemolyticus</i> . <i>Scientific Reports</i> , 2020, 10, 787.	3.4	22
14	Genome organization and definition of the <i>Penaeus monodon</i> viral responsive protein 15 (PmVRP15) promoter. <i>Fish and Shellfish Immunology</i> , 2019, 93, 997-1006.	3.7	1
15	ICTV Virus Taxonomy Profile: Nimaviridae. <i>Journal of General Virology</i> , 2019, 100, 1053-1054.	2.9	44
16	Hemocyanin of <i>Litopenaeus vannamei</i> agglutinates <i>Vibrio parahaemolyticus</i> AHPND (VPAHPND) and neutralizes its toxin. <i>Developmental and Comparative Immunology</i> , 2018, 84, 371-381.	2.3	29
17	Shrimp humoral responses against pathogens: antimicrobial peptides and melanization. <i>Developmental and Comparative Immunology</i> , 2018, 80, 81-93.	2.3	249
18	WSSV-responsive gene expression under the influence of PmVRP15 suppression. <i>Fish and Shellfish Immunology</i> , 2018, 72, 86-94.	3.7	1

#	ARTICLE	IF	CITATIONS
19	White Spot Syndrome Virus-Induced Shrimp miR-315 Attenuates Prophenoloxidase Activation via PPAE3 Gene Suppression. <i>Frontiers in Immunology</i> , 2018, 9, 2184.	4.9	25
20	Plasmolipin, PmPLP1, from <i>Penaeus monodon</i> is a potential receptor for yellow head virus infection. <i>Developmental and Comparative Immunology</i> , 2018, 88, 137-143.	2.3	5
21	Differentially expressed genes in hemocytes of <i>Litopenaeus vannamei</i> challenged with <i>Vibrio parahaemolyticus</i> AHPND (VPAHPND) and VPAHPND toxin. <i>Fish and Shellfish Immunology</i> , 2018, 81, 284-296.	3.7	38
22	A potential application of shrimp antilipopopolysaccharide factor in disease control in aquaculture. <i>Aquaculture Research</i> , 2017, 48, 809-821.	1.8	15
23	Antiviral action of the antimicrobial peptide ALFPm3 from <i>Penaeus monodon</i> against white spot syndrome virus. <i>Developmental and Comparative Immunology</i> , 2017, 69, 23-32.	2.3	40
24	Regulation of antilipopopolysaccharide factors, ALFPm3 and ALFPm6, in <i>Penaeus monodon</i> . <i>Scientific Reports</i> , 2017, 7, 12694.	3.4	24
25	Shrimp miRNAs regulate innate immune response against white spot syndrome virus infection. <i>Developmental and Comparative Immunology</i> , 2016, 60, 191-201.	2.3	52
26	WSV399, a viral tegument protein, interacts with the shrimp protein PmVRP15 to facilitate viral trafficking and assembly. <i>Developmental and Comparative Immunology</i> , 2016, 59, 177-185.	2.3	8
27	Sequence diversity and evolution of antimicrobial peptides in invertebrates. <i>Developmental and Comparative Immunology</i> , 2015, 48, 324-341.	2.3	142
28	Anti-lipopopolysaccharide factor isoform 3 from <i>Penaeus monodon</i> (ALFPm3) exhibits antiviral activity by interacting with WSSV structural proteins. <i>Antiviral Research</i> , 2014, 110, 142-150.	4.2	57
29	PmVRP15, a Novel Viral Responsive Protein from the Black Tiger Shrimp, <i>Penaeus monodon</i> , Promoted White Spot Syndrome Virus Replication. <i>PLoS ONE</i> , 2014, 9, e91930.	2.5	19
30	Proteomic analysis of differentially expressed proteins in <i>Penaeus monodon</i> hemocytes after <i>Vibrio harveyi</i> infection. <i>Proteome Science</i> , 2010, 8, 39.	1.7	72
31	Role of anti-lipopopolysaccharide factor from the black tiger shrimp, <i>Penaeus monodon</i> , in protection from white spot syndrome virus infection. <i>Journal of General Virology</i> , 2009, 90, 1491-1498.	2.9	104
32	Localization of anti-lipopopolysaccharide factor (ALFPm3) in tissues of the black tiger shrimp, <i>Penaeus monodon</i> , and characterization of its binding properties. <i>Developmental and Comparative Immunology</i> , 2008, 32, 1170-1176.	2.3	92
33	Differentially Expressed Genes in Hemocytes of <i>Vibrio harveyi</i> -challenged Shrimp <i>Penaeus monodon</i> . <i>BMB Reports</i> , 2006, 39, 26-36.	2.5	63
34	Recombinant expression and anti-microbial activity of anti-lipopopolysaccharide factor (ALF) from the black tiger shrimp. <i>Developmental and Comparative Immunology</i> , 2005, 29, 841-851.	2.3	184
35	Participation of shrimp pva-miR-166 in hemocyte homeostasis by modulating apoptosis-related gene <i>PvProsaposin</i> during white spot syndrome virus infection. <i>Journal of Virology</i> , 0, , .	3.5	0
