#	ARTICLE	IF	CITATIONS
1	Transport Processes in the Gulf of Mexico Along the River-Estuary-Shelf-Ocean Continuum: a Review of Research from the Gulf of Mexico Research Initiative. <i>Estuaries and Coasts</i> , 2022, 45, 621-657.	1.0	10
2	Predicting coral metapopulation decline in a changing thermal environment. <i>Coral Reefs</i> , 2022, 41, 961-972.	0.9	7
3	The choice of droplet size probability distribution function for oil spill modeling is not trivial. <i>Marine Pollution Bulletin</i> , 2021, 163, 111920.	2.3	5
4	A Coupled Lagrangian-Earth System Model for Predicting Oil Photooxidation. <i>Frontiers in Marine Science</i> , 2021, 8, .	1.2	14
5	Physical Transport Processes that Affect the Distribution of Oil in the Gulf of Mexico: Observations and Modeling. <i>Oceanography</i> , 2021, 34, 58-75.	0.5	8
6	Remote Predictions of Mahi-Mahi (<i>Coryphaena hippurus</i>) Spawning in the Open Ocean Using Summarized Accelerometry Data. <i>Frontiers in Marine Science</i> , 2021, 8, .	1.2	9
7	Effects of Petroleum By-Products and Dispersants on Ecosystems. <i>Oceanography</i> , 2021, 34, 152-163.	0.5	10
8	An integrative investigation of sensory organ development and orientation behavior throughout the larval phase of a coral reef fish. <i>Scientific Reports</i> , 2021, 11, 12377.	1.6	9
9	Ten years of modeling the Deepwater Horizon oil spill. <i>Environmental Modelling and Software</i> , 2021, 142, 105070.	1.9	17
10	Towards integrated modeling of the long-term impacts of oil spills. <i>Marine Policy</i> , 2021, 131, 104554.	1.5	10
11	Determination of Oil Spill Chemical Concentrations in Nearshore Matrices. <i>International Oil Spill Conference Proceedings</i> , 2021, 2021, .	0.1	0
12	Dynamic Coupling of Near-Field and Far-Field Models. , 2020, , 139-154.		5
13	Introduction to the Volume. , 2020, , 4-10.		1
14	Simulating Deep Oil Spills Beyond the Gulf of Mexico. , 2020, , 315-336.		3
15	Comparative Environmental Sensitivity of Offshore Gulf of Mexico Waters Potentially Impacted by Ultra-Deep Oil Well Blowouts. , 2020, , 443-466.		2
16	Far-Field Modeling of a Deep-Sea Blowout: Sensitivity Studies of Initial Conditions, Biodegradation, Sedimentation, and Subsurface Dispersant Injection on Surface Slicks and Oil Plume Concentrations. , 2020, , 170-192.		10
17	Comparison of the Spatial Extent, Impacts to Shorelines, and Ecosystem and Four-Dimensional Characteristics of Simulated Oil Spills. , 2020, , 340-354.		6
18	Connectivity of the Gulf of Mexico Continental Shelf Fish Populations and Implications of Simulated Oil Spills. , 2020, , 369-389.		8

#	ARTICLE	IF	CITATIONS
19	Summary of Contemporary Research on the Use of Chemical Dispersants for Deep-Sea Oil Spills. , 2020, , 494-512.		3
20	Summary of Progress on Major Research Issues: Deep-Sea Oil Spills. , 2020, , 584-594.		1
21	Effects of Exposure to Low Concentrations of Oil on the Expression of Cytochrome P4501a and Routine Swimming Speed of Atlantic Haddock (<i>Melanogrammus aeglefinus</i>) Larvae In Situ. Environmental Science & Technology, 2020, 54, 13879-13887.	4.6	11
22	A Synthesis of Deep Benthic Faunal Impacts and Resilience Following the Deepwater Horizon Oil Spill. Frontiers in Marine Science, 2020, 7, .	1.2	17
23	The effect of the Deepwater Horizon oil spill on two ecosystem services in the Northern Gulf of Mexico. Environmental Modelling and Software, 2020, 133, 104793.	1.9	12
24	Transport, Fate and Impacts of the Deep Plume of Petroleum Hydrocarbons Formed During the Macondo Blowout. Frontiers in Marine Science, 2020, 7, .	1.2	16
25	Ontogeny of Orientation during the Early Life History of the Pelagic Teleost Mahi-Mahi, <i>Coryphaena hippurus</i> Linnaeus, 1758. Oceans, 2020, 1, 237-250.	0.6	3
26	Impacts of a local music festival on fish stress hormone levels and the adjacent underwater soundscape. Environmental Pollution, 2020, 265, 114925.	3.7	13
27	Behavior of Rising Droplets and Bubbles: Impact on the Physics of Deep-Sea Blowouts and Oil Fate. , 2020, , 65-82.		6
28	Invisible oil beyond the Deepwater Horizon satellite footprint. Science Advances, 2020, 6, eaaw8863.	4.7	81
29	EXPERIMENTAL INVESTIGATION, SCALE-UP AND MODELING OF DROPLET SIZE DISTRIBUTIONS IN TURBULENT MULTIPHASE JETS. Multiphase Science and Technology, 2020, 32, 113-136.	0.2	7
30	Introduction to the Volume. , 2020, , 4-15.		1
31	Evaluating the Effectiveness of Fishery Closures for Deep Oil Spills Using a Four-Dimensional Model. , 2020, , 390-402.		1
32	Predicting the impact of future oil-spill closures on fishery-dependent communities—a spatially explicit approach. ICES Journal of Marine Science, 2019, , .	1.2	5
33	Reef fish larvae visually discriminate coral diversity during settlement. Bulletin of Marine Science, 2019, 95, 449-458.	0.4	1
34	Hydrodynamic and biological constraints on group cohesion in plankton. Journal of Theoretical Biology, 2019, 482, 109987.	0.8	4
35	Glass eels (<i>Anguilla anguilla</i>) imprint the magnetic direction of tidal currents from their juvenile estuaries. Communications Biology, 2019, 2, 366.	2.0	23
36	The relationship between the moon cycle and the orientation of glass eels (<i>Anguilla anguilla</i>) at sea. Royal Society Open Science, 2019, 6, 190812.	1.1	13

#	ARTICLE	IF	CITATIONS
37	Resolving the dilemma of dispersant use for deep oil spill response. <i>Environmental Research Letters</i> , 2019, 14, 091002.	2.2	4
38	Atlantic Haddock (<i>Melanogrammus aeglefinus</i>) Larvae Have a Magnetic Compass that Guides Their Orientation. <i>IScience</i> , 2019, 19, 1173-1178.	1.9	18
39	Pulley Ridge, Gulf of Mexico, USA. <i>Coral Reefs of the World</i> , 2019, , 57-69.	0.3	17
40	Ecological spillover from a marine protected area replenishes an overexploited population across an island chain. <i>Conservation Science and Practice</i> , 2019, 1, e17.	0.9	17
41	Biophysical connectivity of snapper spawning aggregations and marine protected area management alternatives in Cuba. <i>Fisheries Oceanography</i> , 2019, 28, 33-42.	0.9	7
42	Dispersal capacity and genetic relatedness in <i>Acropora cervicornis</i> on the Florida Reef Tract. <i>Coral Reefs</i> , 2018, 37, 585-596.	0.9	17
43	Quantitative species-level ecology of reef fish larvae via metabarcoding. <i>Nature Ecology and Evolution</i> , 2018, 2, 306-316.	3.4	56
44	The spatial context of "winning" in MPA network design: Location matters. <i>Conservation Letters</i> , 2018, 11, e12455.	2.8	3
45	Swimming speeds of Mediterranean settlement-stage fish larvae nuance Hjort's aberrant drift hypothesis. <i>Limnology and Oceanography</i> , 2018, 63, 509-523.	1.6	24
46	Lagrangian ocean analysis: Fundamentals and practices. <i>Ocean Modelling</i> , 2018, 121, 49-75.	1.0	313
47	Auto-correlated directional swimming can enhance settlement success and connectivity in fish larvae. <i>Journal of Theoretical Biology</i> , 2018, 439, 76-85.	0.8	16
48	BP Gulf Science Data Reveals Ineffectual Subsea Dispersant Injection for the Macondo Blowout. <i>Frontiers in Marine Science</i> , 2018, 5, .	1.2	20
49	Critical Information Gaps Impeding Understanding of the Role of Larval Connectivity Among Coral Reef Islands in an Era of Global Change. <i>Frontiers in Marine Science</i> , 2018, 5, .	1.2	18
50	Connectivity of Pulley Ridge With Remote Locations as Inferred From Satellite-Tracked Drifter Trajectories. <i>Journal of Geophysical Research: Oceans</i> , 2018, 123, 5742-5750.	1.0	19
51	Biophysical Simulations Support Schooling Behavior of Fish Larvae Throughout Ontogeny. <i>Frontiers in Marine Science</i> , 2018, 5, .	1.2	8
52	Larval Fish Swimming Behavior Alters Dispersal Patterns From Marine Protected Areas in the North-Western Mediterranean Sea. <i>Frontiers in Marine Science</i> , 2018, 5, .	1.2	46
53	Mechanisms of Cross-Shore Transport and Spatial Variability of Phytoplankton on a Rip-Channeled Beach. <i>Frontiers in Marine Science</i> , 2018, 5, .	1.2	6
54	Impacts of the Deepwater Horizon oil spill evaluated using an end-to-end ecosystem model. <i>PLoS ONE</i> , 2018, 13, e0190840.	1.1	82

#	ARTICLE	IF	CITATIONS
55	Larval fish dispersal along an estuarine-ocean gradient. Canadian Journal of Fisheries and Aquatic Sciences, 2017, 74, 1462-1473.	0.7	16
56	Glass eels (<i>Anguilla anguilla</i>) have a magnetic compass linked to the tidal cycle. Science Advances, 2017, 3, e1602007.	4.7	61
57	Shining a light on fish at night: an overview of fish and fisheries in the dark of night, and in deep and polar seas. Bulletin of Marine Science, 2017, 93, 253-284.	0.4	36
58	Occurrence of invasive lionfish (<i>Pterois volitans</i>) larvae in the northern Gulf of Mexico: characterization of dispersal pathways and spawning areas. Biological Invasions, 2017, 19, 1971-1979.	1.2	17
59	Whether European eel leptocephali use the Earth's magnetic field to guide their migration remains an open question. Current Biology, 2017, 27, R998-R1000.	1.8	5
60	Dimethyl Sulfide is a Chemical Attractant for Reef Fish Larvae. Scientific Reports, 2017, 7, 2498.	1.6	22
61	Biophysical connectivity explains population genetic structure in a highly dispersive marine species. Coral Reefs, 2017, 36, 233-244.	0.9	68
62	Reproductive resilience: a paradigm shift in understanding spawner-recruit systems in exploited marine fish. Fish and Fisheries, 2017, 18, 285-312.	2.7	104
63	Advancing the link between ocean connectivity, ecological function and management challenges. ICES Journal of Marine Science, 2017, 74, 1702-1707.	1.2	16
64	Numerical simulations of onshore transport of larvae and detritus to a steep pocket beach. Marine Ecology - Progress Series, 2017, 582, 33-43.	0.9	6
65	Simulating the effects of droplet size, high-pressure biodegradation, and variable flow rate on the subsea evolution of deep plumes from the Macondo blowout. Deep-Sea Research Part II: Topical Studies in Oceanography, 2016, 129, 301-310.	0.6	37
66	How Do Oil, Gas, and Water Interact Near a Subsea Blowout?. Oceanography, 2016, 29, 64-75.	0.5	11
67	The perfect storm: Match-mismatch of bio-physical events drives larval reef fish connectivity between Pulley Ridge mesophotic reef and the Florida Keys. Continental Shelf Research, 2016, 125, 136-146.	0.9	58
68	Description of surface transport in the region of the Belizean Barrier Reef based on observations and alternative high-resolution models. Ocean Modelling, 2016, 106, 74-89.	1.0	20
69	Biophysical processes leading to the ingress of temperate fish larvae into estuarine nursery areas: A review. Estuarine, Coastal and Shelf Science, 2016, 183, 187-202.	0.9	60
70	El Niño and coral larval dispersal across the eastern Pacific marine barrier. Nature Communications, 2016, 7, 12571.	5.8	50
71	Uniting paradigms of connectivity in marine ecology. Ecology, 2016, 97, 2447-2457.	1.5	33
72	Modeling vertical coral connectivity and mesophotic refugia. Coral Reefs, 2016, 35, 23-37.	0.9	80

#	ARTICLE	IF	CITATIONS
73	Depth-Independent Reproduction in the Reef Coral <i>Porites astreoides</i> from Shallow to Mesophotic Zones. <i>PLoS ONE</i> , 2016, 11, e0146068.	1.1	52
74	Decadal analysis of larval connectivity from Cuban snapper (<i>Lutjanidae</i>) spawning aggregations based on biophysical modeling. <i>Marine Ecology - Progress Series</i> , 2016, 550, 175-190.	0.9	27
75	Fertile fathoms: Deep reproductive refugia for threatened shallow corals. <i>Scientific Reports</i> , 2015, 5, 12407.	1.6	84
76	Location Isnâ€™t Everything: Timing of Spawning Aggregations Optimizes Larval Replenishment. <i>PLoS ONE</i> , 2015, 10, e0130694.	1.1	30
77	With a Little Help from My Friends: Group Orientation by Larvae of a Coral Reef Fish. <i>PLoS ONE</i> , 2015, 10, e0144060.	1.1	34
78	The influence of spawning periodicity on population connectivity. <i>Coral Reefs</i> , 2015, 34, 753-757.	0.9	44
79	Intercomparison of oil spill prediction models for accidental blowout scenarios with and without subsea chemical dispersant injection. <i>Marine Pollution Bulletin</i> , 2015, 96, 110-126.	2.3	90
80	High-pressure visual experimental studies of oil-in-water dispersion droplet size. <i>Chemical Engineering Science</i> , 2015, 127, 392-400.	1.9	55
81	Ocean currents generate large footprints in marine palaeoclimate proxies. <i>Nature Communications</i> , 2015, 6, 6521.	5.8	66
82	Modelling the spread and connectivity of waterborne marine pathogens: the case of PaV1 in the Caribbean. <i>ICES Journal of Marine Science</i> , 2015, 72, i139-i146.	1.2	27
83	Sun-Compass Orientation in Mediterranean Fish Larvae. <i>PLoS ONE</i> , 2015, 10, e0135213.	1.1	24
84	In situ orientation of fish larvae can vary among regions. <i>Marine Ecology - Progress Series</i> , 2015, 537, 191-203.	0.9	20
85	How Much Do Marine Connectivity Fluctuations Matter?. <i>American Naturalist</i> , 2014, 184, 523-530.	1.0	35
86	Modelling dispersal and connectivity of broadcast spawning corals at the global scale. <i>Global Ecology and Biogeography</i> , 2014, 23, 1-11.	2.7	139
87	Modelling larval fish navigation: the way forward. <i>ICES Journal of Marine Science</i> , 2014, 71, 918-924.	1.2	64
88	First evidence of fish larvae producing sounds. <i>Biology Letters</i> , 2014, 10, 20140643.	1.0	26
89	Numerical simulations of larval transport into a ripâ€žchanneled surf zone. <i>Limnology and Oceanography</i> , 2014, 59, 1434-1447.	1.6	44
90	Polarized Light Sensitivity and Orientation in Coral Reef Fish Post-Larvae. <i>PLoS ONE</i> , 2014, 9, e88468.	1.1	29

#	ARTICLE	IF	CITATIONS
91	Consistency and inconsistency in multispecies population network dynamics of coral reef ecosystems. <i>Marine Ecology - Progress Series</i> , 2014, 499, 1-18.	0.9	78
92	In situ swimming and orientation behavior of spiny lobster (<i>Panulirus argus</i>) postlarvae. <i>Marine Ecology - Progress Series</i> , 2014, 504, 207-219.	0.9	19
93	Orientation of fish larvae in situ is consistent among locations, years and methods, but varies with time of day. <i>Marine Ecology - Progress Series</i> , 2014, 505, 193-208.	0.9	22
94	Celestial patterns in marine soundscapes. <i>Marine Ecology - Progress Series</i> , 2014, 508, 17-32.	0.9	128
95	Connectivity Modeling System: A probabilistic modeling tool for the multi-scale tracking of biotic and abiotic variability in the ocean. <i>Environmental Modelling and Software</i> , 2013, 42, 47-54.	1.9	270
96	Mesoscale flow variability and its impact on connectivity for the island of Hawai'i. <i>Geophysical Research Letters</i> , 2013, 40, 332-337.	1.5	18
97	Response to Comment on "Evolution of the Macondo Well Blowout: Simulating the Effects of the Circulation and Synthetic Dispersants on the Subsea Oil Transport". <i>Environmental Science & Technology</i> , 2013, 47, 11906-11907.	4.6	13
98	Soundscapes from a Tropical Eastern Pacific reef and a Caribbean Sea reef. <i>Coral Reefs</i> , 2013, 32, 553-557.	0.9	81
99	Does fish larval dispersal differ between high and low latitudes?. <i>Proceedings of the Royal Society B: Biological Sciences</i> , 2013, 280, 20130327.	1.2	60
