Antonio Pinto

List of Publications by Citations

Source: https://exaly.com/author-pdf/2713620/antonio-pinto-publications-by-citations.pdf
Version: 2024-04-28

This document has been generated based on the publications and citations recorded by exaly.com. For the latest version of this publication list, visit the link given above.
The third column is the impact factor (IF) of the journal, and the fourth column is the number of citations of the article.

17 papers	531 citations	13 h-index	20 g-index
20 ext. papers	674 ext. citations	4.8 avg, IF	3.36 L-index

#	Paper	IF	Citations
17	Three-dimensional reconstruction of tarantula myosin filaments suggests how phosphorylation may regulate myosin activity. *Journal of Molecular Biology*, **2008**, 384, 780-97	6.5	110
16	Effects of myosin variants on interacting-heads motif explain distinct hypertrophic and dilated cardiomyopathy phenotypes. *ELife*, **2017**, 6,	8.9	87
15	Conserved Intramolecular Interactions Maintain Myosin Interacting-Heads Motifs Explaining Tarantula Muscle Super-Relaxed State Structural Basis. *Journal of Molecular Biology*, **2016**, 428, 1142-1164	6.5	53
14	A molecular model of phosphorylation-based activation and potentiation of tarantula muscle thick filaments. *Journal of Molecular Biology*, **2011**, 414, 44-61	6.5	49
13	Interacting-heads motif has been conserved as a mechanism of myosin II inhibition since before the origin of animals. *Proceedings of the National Academy of Sciences of the United States of America*, **2018**, 115, E1991-E2000	11.5	44
12	An invertebrate smooth muscle with striated muscle myosin filaments. *Proceedings of the National Academy of Sciences of the United States of America*, **2015**, 112, E5660-8	11.5	34
11	The myosin interacting-heads motif is present in the relaxed thick filament of the striated muscle of scorpion. *Journal of Structural Biology*, **2012**, 180, 469-78	3.4	29
10	Lessons from a tarantula: new insights into myosin interacting-heads motif evolution and its implications on disease. *Biophysical Reviews*, **2018**, 10, 1465-1477	3.7	23
9	Lessons from a tarantula: new insights into muscle thick filament and myosin interacting-heads motif structure and function. *Biophysical Reviews*, **2017**, 9, 461-480	3.7	20
8	Different head environments in tarantula thick filaments support a cooperative activation process. *Biophysical Journal*, **2013**, 105, 2114-22	2.9	20
7	Tarantula myosin free head regulatory light chain phosphorylation stiffens N-terminal extension, releasing it and blocking its docking back. *Molecular BioSystems*, **2015**, 11, 2180-9		19
6	Sequential myosin phosphorylation activates tarantula thick filament via a disorder-order transition. *Molecular BioSystems*, **2015**, 11, 2167-79		15
5	The myosin interacting-heads motif present in live tarantula muscle explains tetanic and posttetanic phosphorylation mechanisms. *Proceedings of the National Academy of Sciences of the United States of America*, **2020**, 117, 11865-11874	11.5	15
4	Schistosome Muscles Contain Striated Muscle-Like Myosin Filaments in a Smooth Muscle-Like Architecture. *Biophysical Journal*, **2014**, 106, 159a	2.9	5
3	The Inhibited, Interacting-Heads Motif Characterizes Myosin II from the Earliest Animals with Muscles. *Biophysical Journal*, **2015**, 108, 301a	2.9	4
2	Improved Imaging, 3D Reconstruction and Homology Modeling of Tarantula Thick Filaments. *Biophysical Journal*, **2015**, 108, 589a	2.9	2
1	O labeling on Ser45 but not on Ser35 supports the cooperative phosphorylation mechanism on tarantula thick filament activation. *Biochemical and Biophysical Research Communications*, **2020**, 524, 198-204	3.4	2
