

Magali Noval Rivas

List of Publications by Year in Descending Order

Source: <https://exaly.com/author-pdf/273047/magali-noval-rivas-publications-by-year.pdf>

Version: 2024-04-27

This document has been generated based on the publications and citations recorded by exaly.com. For the latest version of this publication list, visit the link given above.

The third column is the impact factor (IF) of the journal, and the fourth column is the number of citations of the article.

45
papers

2,470

#	Paper	IF	Citations
45	HLA class I-associated expansion of TRBV11-2 T cells in multisystem inflammatory syndrome in children. <i>Journal of Clinical Investigation</i> , 2021 , 131,	15.9	39
44	Inhibition of IL-6 in the LCWE Mouse Model of Kawasaki Disease Inhibits Acute Phase Reactant Serum Amyloid A but Fails to Attenuate Vasculitis. <i>Frontiers in Immunology</i> , 2021 , 12, 630196	8.4	1
43	MicroRNA-223 Regulates the Development of Cardiovascular Lesions in LCWE-Induced Murine Kawasaki Disease Vasculitis by Repressing the NLRP3 Inflammasome. <i>Frontiers in Pediatrics</i> , 2021 , 9, 662953	3.4	2
42	Rationale for Randomized Clinical Trials Investigating the Potential of BCG Vaccination in Preventing COVID-19 Infection. <i>Bladder Cancer</i> , 2021 , 7, 121-131	1	
41	Multisystem inflammatory syndrome in children is driven by zonulin-dependent loss of gut mucosal barrier. <i>Journal of Clinical Investigation</i> , 2021 , 131,	15.9	46
40	BCG vaccination history associates with decreased SARS-CoV-2 seroprevalence across a diverse cohort of health care workers. <i>Journal of Clinical Investigation</i> , 2021 , 131,	15.9	62
39	Characterization of the T Cell Response to Cell Wall Extract in Children With Kawasaki Disease and Its Potential Role in Vascular Inflammation. <i>Frontiers in Pediatrics</i> , 2021 , 9, 633244	3.4	1
38	The autoimmune signature of hyperinflammatory multisystem inflammatory syndrome in children. <i>Journal of Clinical Investigation</i> , 2021 , 131,	15.9	20
37	A monoclonal antibody against staphylococcal enterotoxin B superantigen inhibits SARS-CoV-2 entry in vitro. <i>Structure</i> , 2021 , 29, 951-962.e3	5.2	13
36	Autophagy-mitophagy induction attenuates cardiovascular inflammation in a murine model of Kawasaki disease vasculitis. <i>JCI Insight</i> , 2021 , 6,	9.9	3
35	NLRP3 Inflammasome Mediates Immune-Stromal Interactions in Vasculitis. <i>Circulation Research</i> , 2021 , 129, e183-e200	15.7	4
34	Platelets Fuel the Inflammasome Activation of Innate Immune Cells. <i>Cell Reports</i> , 2020 , 31, 107615	10.6	37
33	Kawasaki disease: pathophysiology and insights from mouse models. <i>Nature Reviews Rheumatology</i> , 2020 , 16, 391-405	8.1	59
32	A Comprehensive Update on Kawasaki Disease Vasculitis and Myocarditis. <i>Current Rheumatology Reports</i> , 2020 , 22, 6	4.9	19
31	Loss of testosterone impairs anti-tumor neutrophil function. <i>Nature Communications</i> , 2020 , 11, 1613	17.4	15
30	Interleukin-1 Beta-Mediated Sex Differences in Kawasaki Disease Vasculitis Development and Response to Treatment. <i>Arteriosclerosis, Thrombosis, and Vascular Biology</i> , 2020 , 40, 802-818	9.4	10
29	Identification of a unique TCR repertoire, consistent with a superantigen selection process in Children with Multi-system Inflammatory Syndrome 2020 ,		5

28	A monoclonal antibody against staphylococcal enterotoxin B superantigen inhibits SARS-CoV-2 entry 2020 ,		6
27	IL-1-dependent electrophysiological changes and cardiac neural remodeling in a mouse model of Kawasaki disease vasculitis. <i>Clinical and Experimental Immunology</i> , 2020 , 199, 303-313	6.2	5
26	Regulatory T Cell-Derived TGF- β Controls Multiple Checkpoints Governing Allergy and Autoimmunity. <i>Immunity</i> , 2020 , 53, 1202-1214.e6	32.3	16
25	Superantigenic character of an insert unique to SARS-CoV-2 spike supported by skewed TCR repertoire in patients with hyperinflammation. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2020 , 117, 25254-25262	11.5	116
24	Intestinal Permeability and IgA Provoke Immune Vasculitis Linked to Cardiovascular Inflammation. <i>Immunity</i> , 2019 , 51, 508-521.e6	32.3	49
23	Microbiota therapy acts via a regulatory T cell MyD88/ROR γ pathway to suppress food allergy. <i>Nature Medicine</i> , 2019 , 25, 1164-1174	50.5	132
22	IL-1 receptor antagonist, anakinra, prevents myocardial dysfunction in a mouse model of Kawasaki disease vasculitis and myocarditis. <i>Clinical and Experimental Immunology</i> , 2019 , 198, 101-110	6.2	31
21	Myocardial fibrosis after adrenergic stimulation as a long-term sequela in a mouse model of Kawasaki disease vasculitis. <i>JCI Insight</i> , 2019 , 4,	9.9	11
20	T-Cell-Intrinsic Receptor Interacting Protein 2 Regulates Pathogenic T Helper 17 Cell Differentiation. <i>Immunity</i> , 2018 , 49, 873-885.e7	32.3	11
19	CD8+ T Cells Contribute to the Development of Coronary Arteritis in the Lactobacillus casei Cell Wall Extract-Induced Murine Model of Kawasaki Disease. <i>Arthritis and Rheumatology</i> , 2017 , 69, 410-421	9.5	23
18	Characterization of the microbiome of nipple aspirate fluid of breast cancer survivors. <i>Scientific Reports</i> , 2016 , 6, 28061	4.9	103
17	The microbiome in asthma. <i>Current Opinion in Pediatrics</i> , 2016 , 28, 764-771	3.2	45
16	IL-4 production by group 2 innate lymphoid cells promotes food allergy by blocking regulatory T-cell function. <i>Journal of Allergy and Clinical Immunology</i> , 2016 , 138, 801-811.e9	11.5	142
15	Role of Interleukin-1 Signaling in a Mouse Model of Kawasaki Disease-Associated Abdominal Aortic Aneurysm. <i>Arteriosclerosis, Thrombosis, and Vascular Biology</i> , 2016 , 36, 886-97	9.4	59
14	Regulatory T cells in allergic diseases. <i>Journal of Allergy and Clinical Immunology</i> , 2016 , 138, 639-652	11.5	200
13	Regulatory T cell reprogramming toward a Th2-cell-like lineage impairs oral tolerance and promotes food allergy. <i>Immunity</i> , 2015 , 42, 512-23	32.3	222
12	MyD88 Adaptor-Dependent Microbial Sensing by Regulatory T Cells Promotes Mucosal Tolerance and Enforces Commensalism. <i>Immunity</i> , 2015 , 43, 289-303	32.3	100
11	Vehicular exhaust particles promote allergic airway inflammation through an aryl hydrocarbon receptor-notch signaling cascade. <i>Journal of Allergy and Clinical Immunology</i> , 2015 , 136, 441-53	11.5	65

10	Immunoglobulin E signal inhibition during allergen ingestion leads to reversal of established food allergy and induction of regulatory T cells. <i>Immunity</i> , 2014 , 41, 141-51	32.3	100
9	Oral immunotherapy induces IgG antibodies that act through FcRIIb to suppress IgE-mediated hypersensitivity. <i>Journal of Allergy and Clinical Immunology</i> , 2014 , 134, 1310-1317.e6	11.5	119
8	Direct effects of IL-4 on mast cells drive their intestinal expansion and increase susceptibility to anaphylaxis in a murine model of food allergy. <i>Mucosal Immunology</i> , 2013 , 6, 740-50	9.2	86
7	A microbiota signature associated with experimental food allergy promotes allergic sensitization and anaphylaxis. <i>Journal of Allergy and Clinical Immunology</i> , 2013 , 131, 201-12	11.5	273
6	MyD88 is critically involved in immune tolerance breakdown at environmental interfaces of Foxp3-deficient mice. <i>Journal of Clinical Investigation</i> , 2012 , 122, 1933-47	15.9	46
5	NK cell regulation of CD4 T cell-mediated graft-versus-host disease. <i>Journal of Immunology</i> , 2010 , 184, 6790-8	5.3	62
4	Reviving function in CD4+ T cells adapted to persistent systemic antigen. <i>Journal of Immunology</i> , 2009 , 183, 4284-91	5.3	22
3	CD8+ T-Cell depletion and rapamycin synergize with combined coreceptor/stimulation blockade to induce robust limb allograft tolerance in mice. <i>American Journal of Transplantation</i> , 2008 , 8, 2527-36	8.7	21
2	Endotoxin hyperresponsiveness upon CD4+ T cell reconstitution in lymphopenic mice: control by natural regulatory T cells. <i>European Journal of Immunology</i> , 2008 , 38, 48-53	6.1	3
1	Cutting edge: small molecule CD40 ligand mimetics promote control of parasitemia and enhance T cells producing IFN-gamma during experimental <i>Trypanosoma cruzi</i> infection. <i>Journal of Immunology</i> , 2007 , 178, 6700-4	5.3	21
