#	ARTICLE	IF	CITATIONS
1	Neural Predictors of Giving in to Temptation in Daily Life. <i>Psychological Science</i> , 2014, 25, 1337-1344.	1.8	185
2	Motivational and neural correlates of self-control of eating: A combined neuroimaging and experience sampling study in dieting female college students. <i>Appetite</i> , 2016, 103, 192-199.	1.8	39
3	A balance of activity in brain control and reward systems predicts self-regulatory outcomes. <i>Social Cognitive and Affective Neuroscience</i> , 2017, 12, 832-838.	1.5	35
4	Neural mechanisms of emotion regulation and their role in endocrine and immune functioning: A review with implications for treatment of affective disorders. <i>Neuroscience and Biobehavioral Reviews</i> , 2018, 95, 508-514.	2.9	33
5	Implicit reappraisal as an emotional buffer: Reappraisal-related neural activity moderates the relationship between inattention and perceived stress during exposure to negative stimuli. <i>Cognitive, Affective and Behavioral Neuroscience</i> , 2019, 19, 355-365.	1.0	23
6	Cognitive reappraisal of low-calorie food predicts real-world craving and consumption of high- and low-calorie foods in daily life. <i>Appetite</i> , 2018, 131, 44-52.	1.8	22
7	Emotion Regulation and Immune Functioning During Grief: Testing the Role of Expressive Suppression and Cognitive Reappraisal in Inflammation Among Recently Bereaved Spouses. <i>Psychosomatic Medicine</i> , 2020, 82, 2-9.	1.3	20
8	Boundary conditions of methamphetamine craving.. <i>Experimental and Clinical Psychopharmacology</i> , 2015, 23, 436-444.	1.3	18
9	Media multitasking is associated with higher risk for obesity and increased responsiveness to rewarding food stimuli. <i>Brain Imaging and Behavior</i> , 2020, 14, 1050-1061.	1.1	17
10	Recruitment of cognitive control regions during effortful self-control is associated with altered brain activity in control and reward systems in dieters during subsequent exposure to food commercials. <i>PeerJ</i> , 2019, 7, e6550.	0.9	16
11	Neural indicators of food cue reactivity, regulation, and valuation and their associations with body composition and daily eating behavior. <i>Social Cognitive and Affective Neuroscience</i> , 2023, 18, .	1.5	14
12	Reducing reward responsivity and daily food desires in female dieters through domain-specific training. <i>Social Neuroscience</i> , 2019, 14, 470-483.	0.7	12
13	Minding One's Reach (To Eat): The Promise of Computer Mouse-Tracking to Study Self-Regulation of Eating. <i>Frontiers in Nutrition</i> , 2018, 5, 43.	1.6	10
14	Media multitasking is associated with altered processing of incidental, irrelevant cues during person perception. <i>BMC Psychology</i> , 2018, 6, 44.	0.9	8
15	Brief training in regulation of craving reduces cigarette smoking. <i>Journal of Substance Abuse Treatment</i> , 2022, 138, 108749.	1.5	7
16	Self-Regulatory Strength: Neural Mechanisms and Implications for Training., 2015, , 43-54.		6
17	Media Multitasking Is Associated With Higher Body Mass Index in Pre-adolescent Children. <i>Frontiers in Psychology</i> , 2019, 10, 2534.	1.1	6
18	Associations between use of self-regulatory strategies and daily eating patterns: An experience sampling study in college-aged women. <i>Motivation and Emotion</i> , 2021, 45, 747-758.	0.8	4

#	ARTICLE	IF	CITATIONS
19	Regulating Self-Image on Instagram: Links Between Social Anxiety, Instagram Contingent Self-Worth, and Content Control Behaviors. <i>Frontiers in Psychology</i> , 2021, 12, 711447.	1.1	2
