#	ARTICLE	IF	CITATIONS
1	Biological Networks across Scalesâ€”The Theoretical and Empirical Foundations for Time-Varying Complex Networks that Connect Structure and Function across Levels of Biological Organization. <i>Integrative and Comparative Biology</i> , 2022, 61, 1991-2010.	0.9	5
2	Shore crabs reveal novel evolutionary attributes of the mushroom body. <i>ELife</i> , 2021, 10, .	2.8	6
3	The lobula plate is exclusive to insects. <i>Arthropod Structure and Development</i> , 2021, 61, 101031.	0.8	8
4	Convergent evolution of optic lobe neuropil in Pancrustacea. <i>Arthropod Structure and Development</i> , 2021, 61, 101040.	0.8	9
5	Mushroom bodies and reniform bodies coexisting in crabs cannot both be homologs of the insect mushroom body. <i>Journal of Comparative Neurology</i> , 2021, 529, 3265-3271.	0.9	3
6	Leancoiliidae reveals the ancestral organization of the stem euarthropod brain. <i>Current Biology</i> , 2021, 31, 4397-4404.e2.	1.8	13
7	Mushroom bodies in Reptantia reflect a major transition in crustacean brain evolution. <i>Journal of Comparative Neurology</i> , 2020, 528, 261-282.	0.9	12
8	The reniform body: An integrative lateral protocerebral neuropil complex of Eumalacostraca identified in Stomatopoda and Brachyura. <i>Journal of Comparative Neurology</i> , 2020, 528, 1079-1094.	0.9	9
9	Ancestral regulatory mechanisms specify conserved midbrain circuitry in arthropods and vertebrates. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2020, 117, 19544-19555.	3.3	21
10	<i>Nomen est omen</i>, cognitive dissonance, and homology of memory centers in crustaceans and insects. <i>Journal of Comparative Neurology</i> , 2020, 528, 2595-2601.	0.9	8
11	Mushroom body evolution demonstrates homology and divergence across Pancrustacea. <i>ELife</i> , 2020, 9, .	2.8	30
12	A Toll-receptor map underlies structural brain plasticity. <i>ELife</i> , 2020, 9, .	2.8	27
13	Mushroom bodies in crustaceans: Insectâ€like organization in the caridid shrimp <i>Lebbeus groenlandicus</i>. <i>Journal of Comparative Neurology</i> , 2019, 527, 2371-2387.	0.9	15
14	Multiple spectral channels in branchiopods. I. Vision in dim light and neural correlates. <i>Journal of Experimental Biology</i> , 2018, 221, .	0.8	3
15	Representation of the stomatopod's retinal midband in the optic lobes: Putative neural substrates for integrating chromatic, achromatic and polarization information. <i>Journal of Comparative Neurology</i> , 2018, 526, 1148-1165.	0.9	10
16	Editorial. <i>Arthropod Structure and Development</i> , 2018, 47, 1.	0.8	1
17	Neural organization of afferent pathways from the stomatopod compound eye. <i>Journal of Comparative Neurology</i> , 2017, 525, 3010-3030.	0.9	18
18	Editorial. <i>Arthropod Structure and Development</i> , 2017, 46, 1.	0.8	1

#	ARTICLE	IF	CITATIONS
19	Insect-Like Organization of the Stomatopod Central Complex: Functional and Phylogenetic Implications. <i>Frontiers in Behavioral Neuroscience</i> , 2017, 11, 12.	1.0	33
20	An insect-like mushroom body in a crustacean brain. <i>ELife</i> , 2017, 6, .	2.8	43
21	The larval nervous system of the penis worm <i>Priapulus caudatus</i> (Ecdysozoa). <i>Philosophical Transactions of the Royal Society B: Biological Sciences</i> , 2016, 371, 20150050.	1.8	23
22	Fossils and the Evolution of the Arthropod Brain. <i>Current Biology</i> , 2016, 26, R989-R1000.	1.8	38
23	Genealogical correspondence of a forebrain centre implies an executive brain in the protostomeâ€“deuterostome bilaterian ancestor. <i>Philosophical Transactions of the Royal Society B: Biological Sciences</i> , 2016, 371, 20150055.	1.8	45
24	Introduction to â€“Homology and convergence in nervous system evolutionâ€“™. <i>Philosophical Transactions of the Royal Society B: Biological Sciences</i> , 2016, 371, 20150034.	1.8	9
25	Waptia revisited: Intimations of behaviors. <i>Arthropod Structure and Development</i> , 2016, 45, 173-184.	0.8	20
26	Arthropod eyes: The early Cambrian fossil record and divergent evolution of visual systems. <i>Arthropod Structure and Development</i> , 2016, 45, 152-172.	0.8	64
27	Preservational Pathways of Corresponding Brains of a Cambrian Euarthropod. <i>Current Biology</i> , 2015, 25, 2969-2975.	1.8	51
28	Unlocking the early fossil record of the arthropod central nervous system. <i>Philosophical Transactions of the Royal Society B: Biological Sciences</i> , 2015, 370, 20150038.	1.8	37
29	Central projections of antennular chemosensory and mechanosensory afferents™ in the brain of the terrestrial hermit crab ( <i>Coenobita clypeatus</i> ; Coenobitidae, Anomura). <i>Frontiers in Neuroanatomy</i> , 2015, 9, 94.	0.9	16
30	Introduction to â€“Origin and evolution of the nervous systemâ€“™. <i>Philosophical Transactions of the Royal Society B: Biological Sciences</i> , 2015, 370, 20150033.	1.8	8
31	Palaeontology: Clearing the Heads of Cambrian Arthropods. <i>Current Biology</i> , 2015, 25, R616-R618.	1.8	3
32	Evolutionarily conserved mechanisms for the selection and maintenance of behavioural activity. <i>Philosophical Transactions of the Royal Society B: Biological Sciences</i> , 2015, 370, 20150053.	1.8	52
33	Genealogical Correspondence of Mushroom Bodies across Invertebrate Phyla. <i>Current Biology</i> , 2015, 25, 38-44.	1.8	74
34	The Insect Brain: A COMMENTATED PRIMER. , 2015, , 597-639.		8
35	Responses of <i>Drosophila</i> giant descending neurons to visual and mechanical stimuli. <i>Journal of Experimental Biology</i> , 2014, 217, 2121-9.	0.8	28
36	Cong et al. reply. <i>Nature</i> , 2014, 516, E3-E4.	13.7	7

#	ARTICLE	IF	CITATIONS
37	An exceptionally preserved arthropod cardiovascular system from the early Cambrian. <i>Nature Communications</i> , 2014, 5, 3560.	5.8	39
38	A Systematic Nomenclature for the Insect Brain. <i>Neuron</i> , 2014, 81, 755-765.	3.8	564
39	Brain structure resolves the segmental affinity of anomalocaridid appendages. <i>Nature</i> , 2014, 513, 538-542.	13.7	136
40	A letter from the Editors. <i>Arthropod Structure and Development</i> , 2014, 43, 1.	0.8	0
41	A precocious adult visual center in the larva defines the unique optic lobe of the split-eyed whirligig beetle <i>Dineutus sublineatus</i> . <i>Frontiers in Zoology</i> , 2013, 10, 7.	0.9	11
42	Deep Homology of Arthropod Central Complex and Vertebrate Basal Ganglia. <i>Science</i> , 2013, 340, 157-161.	6.0	290
43	Homology versus Convergence in Resolving Transphyletic Correspondences of Brain Organization. <i>Brain, Behavior and Evolution</i> , 2013, 82, 215-219.	0.9	31
44	Chelicerate neural ground pattern in a Cambrian great appendage arthropod. <i>Nature</i> , 2013, 502, 364-367.	13.7	123
45	Optic Glomeruli and Their Inputs in <i>Drosophila</i> Share an Organizational Ground Pattern with the Antennal Lobes. <i>Journal of Neuroscience</i> , 2012, 32, 6061-6071.	1.7	91
46	Complex brain and optic lobes in an early Cambrian arthropod. <i>Nature</i> , 2012, 490, 258-261.	13.7	168
47	Representation of the brain's superior protocerebrum of the flesh fly, <i>Neobellieria bullata</i> , in the central body. <i>Journal of Comparative Neurology</i> , 2012, 520, 3070-3087.	0.9	29
48	The minute brain of the copepod <i>Tigriopus californicus</i> supports a complex ancestral ground pattern of the tetraconate cerebral nervous systems. <i>Journal of Comparative Neurology</i> , 2012, 520, 3446-3470.	0.9	38
49	Neuronal organization of the hemiellipsoid body of the land hermit crab, <i>Coenobita clypeatus</i> : Correspondence with the mushroom body ground pattern. <i>Journal of Comparative Neurology</i> , 2012, 520, 2824-2846.	0.9	52
50	Visual inputs to the mushroom body calyces of the whirligig beetle <i>Dineutus sublineatus</i> : Modality switching in an insect. <i>Journal of Comparative Neurology</i> , 2012, 520, 2562-2574.	0.9	39
51	Visual inputs to the mushroom body calyces of the whirligig beetle <i>Dineutus sublineatus</i> : Modality switching in an insect. <i>Journal of Comparative Neurology</i> , 2012, 520, Spc1-Spc1.	0.9	36
52	A letter from the Editors. <i>Arthropod Structure and Development</i> , 2011, 40, 1.	0.8	0
53	A new view of insect-crustacean relationships I. Inferences from neural cladistics and comparative neuroanatomy. <i>Arthropod Structure and Development</i> , 2011, 40, 276-288.	0.8	84
54	Preface. <i>Arthropod Structure and Development</i> , 2010, 39, 71.	0.8	0

#	ARTICLE	IF	CITATIONS
55	Dynamics of glutamatergic signaling in the mushroom body of young adult <i>Drosophila</i> . <i>Neural Development</i> , 2010, 5, 10.	1.1	50
56	Brain Homology: Dohrn of a New Era?. <i>Brain, Behavior and Evolution</i> , 2010, 76, 165-167.	0.9	8
57	Earlier Days. <i>Journal of Neurogenetics</i> , 2009, 23, 11-14.	0.6	0
58	The effect of age on a visual learning task in the American cockroach. <i>Learning and Memory</i> , 2009, 16, 210-223.	0.5	23
59	A letter from the Editors. <i>Arthropod Structure and Development</i> , 2009, 38, 1.	0.8	3
60	Neural organization of first optic neuropils in the littoral crab <i>Hemigrapsus oregonensis</i> and the semiterrestrial species <i>Chasmagnathus granulatus</i> . <i>Journal of Comparative Neurology</i> , 2009, 513, 129-150.	0.9	38
61	Ground plan of the insect mushroom body: Functional and evolutionary implications. <i>Journal of Comparative Neurology</i> , 2009, 513, 265-291.	0.9	200
62	Dimorphic Olfactory Lobes in the Arthropoda. <i>Annals of the New York Academy of Sciences</i> , 2009, 1170, 487-496.	1.8	16
63	Brain and Optic Lobes. , 2009, , 121-130.		2
64	Brain organization and the origin of insects: an assessment. <i>Proceedings of the Royal Society B: Biological Sciences</i> , 2009, 276, 1929-1937.	1.2	106
65	Global and local modulatory supply to the mushroom bodies of the moth <i>Spodoptera littoralis</i> . <i>Arthropod Structure and Development</i> , 2008, 37, 260-272.	0.8	10
66	Johann Fluggel (1834–1918) and the birth of comparative insect neuroanatomy and brain nomenclature. <i>Arthropod Structure and Development</i> , 2008, 37, 434-441.	0.8	5
67	Dissection of the Peripheral Motion Channel in the Visual System of <i>Drosophila melanogaster</i> . <i>Neuron</i> , 2007, 56, 155-170.	3.8	243
68	Learning with half a brain. <i>Developmental Neurobiology</i> , 2007, 67, 740-751.	1.5	22
69	Organization of local interneurons in optic glomeruli of the dipterous visual system and comparisons with the antennal lobes. <i>Developmental Neurobiology</i> , 2007, 67, 1267-1288.	1.5	46
70	Visual system of calliphorid flies: Motion- and orientation-sensitive visual interneurons supplying dorsal optic glomeruli. <i>Journal of Comparative Neurology</i> , 2007, 500, 189-208.	0.9	31
71	Visual system of calliphorid flies: Organization of optic glomeruli and their lobula complex efferents. <i>Journal of Comparative Neurology</i> , 2007, 500, 166-188.	0.9	55
72	Diverse speed response properties of motion sensitive neurons in the fly's optic lobe. <i>Journal of Comparative Physiology A: Neuroethology, Sensory, Neural, and Behavioral Physiology</i> , 2007, 193, 233-247.	0.7	4

#	ARTICLE	IF	CITATIONS
73	Arthropod phylogeny: onychophoran brain organization suggests an archaic relationship with a chelicerate stem lineage. <i>Proceedings of the Royal Society B: Biological Sciences</i> , 2006, 273, 1857-1866.	1.2	148
74	Functional division of intrinsic neurons in the mushroom bodies of male <i>Spodoptera littoralis</i> revealed by antibodies against aspartate, taurine, FMRF-amide, Mas-allatotropin and DCO. <i>Arthropod Structure and Development</i> , 2006, 35, 153-168.	0.8	30
75	The organization and evolutionary implications of neuropils and their neurons in the brain of the onychophoran <i>Euperipatoides rowelli</i> . <i>Arthropod Structure and Development</i> , 2006, 35, 169-196.	0.8	98
76	Comparison of octopamine-like immunoreactivity in the brains of the fruit fly and blow fly. <i>Journal of Comparative Neurology</i> , 2006, 494, 460-475.	0.9	105
77	Development-dependent and -independent ubiquitin expression in divisions of the cockroach mushroom body. <i>Journal of Comparative Neurology</i> , 2006, 496, 556-571.	0.9	7
78	The evolution of crustacean and insect optic lobes and the origins of chiasmata. <i>Arthropod Structure and Development</i> , 2005, 34, 235-256.	0.8	127
79	Octopamine-like immunoreactivity in the honey bee and cockroach: Comparable organization in the brain and subesophageal ganglion. <i>Journal of Comparative Neurology</i> , 2005, 488, 233-254.	0.9	94
80	Organization of Kenyon cells in subdivisions of the mushroom bodies of a lepidopteran insect. <i>Journal of Comparative Neurology</i> , 2005, 491, 290-304.	0.9	40
81	Organization of optic lobes that support motion detection in a semiterrestrial crab. <i>Journal of Comparative Neurology</i> , 2005, 493, 396-411.	0.9	69
82	Sign-conserving amacrine neurons in the fly's external plexiform layer. <i>Visual Neuroscience</i> , 2005, 22, 345-358.	0.5	12
83	Memory consolidation and gene expression in <i>Periplaneta americana</i> . <i>Learning and Memory</i> , 2005, 12, 30-38.	0.5	22
84	Spatial learning in the restrained American cockroach <i>Periplaneta americana</i> . <i>Journal of Experimental Biology</i> , 2004, 207, 377-383.	0.8	31
85	The computational basis of an identified neuronal circuit for elementary motion detection in dipterous insects. <i>Visual Neuroscience</i> , 2004, 21, 567-586.	0.5	36
86	Chemical neuroanatomy of the fly's movement detection pathway. <i>Journal of Comparative Neurology</i> , 2004, 468, 6-23.	0.9	50
87	Development and morphology of Class II Kenyon cells in the mushroom bodies of the honey bee, <i>Apis mellifera</i> . <i>Journal of Comparative Neurology</i> , 2004, 474, 325-339.	0.9	60
88	A simple mushroom body in an African scarabid beetle. <i>Journal of Comparative Neurology</i> , 2004, 478, 219-232.	0.9	27
89	A comment from the editors. <i>Arthropod Structure and Development</i> , 2003, 32, 1.	0.8	0
90	A unique mushroom body substructure common to basal cockroaches and to termites. <i>Journal of Comparative Neurology</i> , 2003, 456, 305-320.	0.9	56

#	ARTICLE	IF	CITATIONS
91	Retinotopic pathways providing motion-selective information to the lobula from peripheral elementary motion-detecting circuits. <i>Journal of Comparative Neurology</i> , 2003, 457, 326-344.	0.9	28
92	Conserved and convergent organization in the optic lobes of insects and isopods, with reference to other crustacean taxa. <i>Journal of Comparative Neurology</i> , 2003, 467, 150-172.	0.9	119
93	Anatomical organization of retinotopic motion-sensitive pathways in the optic lobes of flies. <i>Microscopy Research and Technique</i> , 2003, 62, 132-150.	1.2	51
94	The mushroom bodies of <i>Drosophila melanogaster</i> : An immunocytochemical and golgi study of Kenyon cell organization in the calyces and lobes. <i>Microscopy Research and Technique</i> , 2003, 62, 151-169.	1.2	150
95	Common design in a unique midline neuropil in the brains of arthropods. <i>Arthropod Structure and Development</i> , 2002, 31, 77-91.	0.8	142
96	Organization of the honey bee mushroom body: Representation of the calyx within the vertical and gamma lobes. <i>Journal of Comparative Neurology</i> , 2002, 450, 4-33.	0.9	302
97	Development of laminar organization in the mushroom bodies of the cockroach: Kenyon cell proliferation, outgrowth, and maturation. <i>Journal of Comparative Neurology</i> , 2001, 439, 331-351.	0.9	62
98	Taurine-, aspartate- and glutamate-like immunoreactivity identifies chemically distinct subdivisions of Kenyon cells in the cockroach mushroom body. <i>Journal of Comparative Neurology</i> , 2001, 439, 352-367.	0.9	68
99	Exploitation of an Ancient Escape Circuit by an Avian Predator: Relationships between Taxon-Specific Prey Escape Circuits and the Sensitivity to Visual Cues from the Predator. <i>Brain, Behavior and Evolution</i> , 2001, 58, 218-240.	0.9	46
100	Pathways in Dipteran Insects for Early Visual Motion Processing. , 2001, , 68-82.		4
101	Parallel organization in honey bee mushroom bodies by peptidergic kenyon cells. <i>Journal of Comparative Neurology</i> , 2000, 424, 179-195.	0.9	71
102	Organization and significance of neurons that detect change of visual depth in the hawk moth <i>Manduca sexta</i> . <i>Journal of Comparative Neurology</i> , 2000, 424, 356-376.	0.9	79
103	Erratum. <i>Journal of Comparative Neurology</i> , 2000, 428, 760-760.	0.9	3
104	Optic flow representation in the optic lobes of Diptera: modeling the role of T5 directional tuning properties. <i>Journal of Comparative Physiology A: Neuroethology, Sensory, Neural, and Behavioral Physiology</i> , 2000, 186, 783-797.	0.7	6
105	Optic flow representation in the optic lobes of Diptera: modeling innervation matrices onto collators and their evolutionary implications. <i>Journal of Comparative Physiology A: Neuroethology, Sensory, Neural, and Behavioral Physiology</i> , 2000, 186, 799-811.	0.7	6
106	Exploitation of an Ancient Escape Circuit by an Avian Predator: Prey Sensitivity to Model Predator Display in the Field. <i>Brain, Behavior and Evolution</i> , 2000, 56, 94-106.	0.9	50
107	Parallel organization in honey bee mushroom bodies by peptidergic Kenyon cells. <i>Journal of Comparative Neurology</i> , 2000, 424, 179-95.	0.9	22
108	Olfactory systems: common design, uncommon origins?. <i>Current Opinion in Neurobiology</i> , 1999, 9, 634-639.	2.0	211

#	ARTICLE	IF	CITATIONS
109	Organization of olfactory and multimodal afferent neurons supplying the calyx and pedunculus of the cockroach mushroom bodies. <i>Journal of Comparative Neurology</i> , 1999, 409, 603-625.	0.9	120
110	Representation of the calyces in the medial and vertical lobes of cockroach mushroom bodies. , 1999, 409, 626-646.		85
111	Multimodal efferent and recurrent neurons in the medial lobes of cockroach mushroom bodies. , 1999, 409, 647-663.		121
112	Chapter 24 A Brain Region in Insects That Supervises Walking. <i>Progress in Brain Research</i> , 1999, 123, 273-284.	0.9	101
113	Organization of olfactory and multimodal afferent neurons supplying the calyx and pedunculus of the cockroach mushroom bodies. <i>Journal of Comparative Neurology</i> , 1999, 409, 603-25.	0.9	34
114	Functionally and anatomically segregated visual pathways in the lobula complex of a calliphorid fly. <i>Journal of Comparative Neurology</i> , 1998, 396, 84-104.	0.9	31
115	Mushroom bodies of the cockroach: Activity and identities of neurons recorded in freely moving animals. <i>Journal of Comparative Neurology</i> , 1998, 402, 501-519.	0.9	115
116	Mushroom bodies of the cockroach: Their participation in place memory. , 1998, 402, 520-537.		269
117	Crustacean â€œ Insect Relationships: The Use of Brain Characters to Derive Phylogeny amongst Segmented Invertebrates. <i>Brain, Behavior and Evolution</i> , 1998, 52, 186-206.	0.9	195
118	Evolution, Discovery, and Interpretations of Arthropod Mushroom Bodies. <i>Learning and Memory</i> , 1998, 5, 11-37.	0.5	425
119	The Organization of Extrinsic Neurons and Their Implications in the Functional Roles of the Mushroom Bodies in <i>Drosophila melanogaster</i> Meigen. <i>Learning and Memory</i> , 1998, 5, 52-77.	0.5	274
120	The relevance of neural architecture to visual performance: Phylogenetic conservation and variation in dipteran visual systems. <i>Journal of Comparative Neurology</i> , 1997, 383, 282-304.	0.9	66
121	Morphology and sensory modality of mushroom body extrinsic neurons in the brain of the cockroach, <i>Periplaneta americana</i> . <i>Journal of Comparative Neurology</i> , 1997, 387, 631-650.	0.9	163
122	Morphology and sensory modality of mushroom body extrinsic neurons in the brain of the cockroach, <i>Periplaneta americana</i> . , 1997, 387, 631.		6
123	Visual Motion-Detection Circuits in Flies: Parallel Direction- and Non-Direction-Sensitive Pathways between the Medulla and Lobula Plate. <i>Journal of Neuroscience</i> , 1996, 16, 4551-4562.	1.7	90
124	Visual Motion-Detection Circuits in Flies: Small-Field Retinotopic Elements Responding to Motion Are Evolutionarily Conserved across Taxa. <i>Journal of Neuroscience</i> , 1996, 16, 4563-4578.	1.7	63
125	Oculomotor control in calliphorid flies: Organization of descending neurons to neck motor neurons responding to visual stimuli. <i>Journal of Comparative Neurology</i> , 1995, 361, 267-284.	0.9	53
126	Oculomotor control in calliphorid flies: Head movements during activation and inhibition of neck motor neurons corroborate neuroanatomical predictions. <i>Journal of Comparative Neurology</i> , 1995, 361, 285-297.	0.9	42

#	ARTICLE	IF	CITATIONS
127	Oculomotor control in calliphorid flies: GABAergic organization in heterolateral inhibitory pathways. <i>Journal of Comparative Neurology</i> , 1995, 361, 298-320.	0.9	38
128	Visual motion detection circuits in flies: peripheral motion computation by identified small-field retinotopic neurons. <i>Journal of Neuroscience</i> , 1995, 15, 5596-5611.	1.7	95
129	Flybrain, an on-line atlas and database of the <i>Drosophila</i> nervous system. <i>Neuron</i> , 1995, 15, 17-20.	3.8	54
130	Subdivision of the <i>drosophila</i> mushroom bodies by enhancer-trap expression patterns. <i>Neuron</i> , 1995, 15, 45-54.	3.8	336
131	Two visual systems in one brain: Neuropils serving the secondary eyes of the spider <i>Cupiennius salei</i> . <i>Journal of Comparative Neurology</i> , 1993, 328, 43-62.	0.9	107
132	Two visual systems in one brain: Neuropils serving the principal eyes of the spider <i>Cupiennius salei</i> . <i>Journal of Comparative Neurology</i> , 1993, 328, 63-75.	0.9	113
133	Small-field neurons associated with oculomotor control in muscoid flies: Cellular organization in the lobula plate. <i>Journal of Comparative Neurology</i> , 1992, 316, 56-71.	0.9	23
