| # | ARTICLE                                                                                                                                                                                                              | IF  | CITATIONS |
|---|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 1 | Altered DNA methylation in liver and adipose tissues derived from individuals with obesity and type 2 diabetes. BMC Medical Genetics, 2018, 19, 28.                                                                  | 2.1 | 32        |
| 2 | Towards precision medicine: defining and characterizing adipose tissue dysfunction to identify early immunometabolic risk in symptom-free adults from the GEMM family study. Adipocyte, 2020, 9, 153-169.            | 2.8 | 13        |
| 3 | Deep Multi-OMICs and Multi-Tissue Characterization in a Pre- and Postprandial State in Human Volunteers: The GEMM Family Study Research Design. Genes, 2018, 9, 532.                                                 | 2.4 | 10        |
| 4 | Alterations of DNA methylation during adipogenesis differentiation of mesenchymal stem cells isolated from adipose tissue of patients with obesity is associated with type 2 diabetes. Adipocyte, 2021, 10, 493-504. | 2.8 | 5         |
| 5 | Replication of Integrative Data Analysis for Adipose Tissue Dysfunction, Low-Grade Inflammation, Postprandial Responses and OMICs Signatures in Symptom-Free Adults. Biology, 2021, 10, 1342.                        | 2.8 | 0         |
