VULLONG

1Phosphorus in China's Intensive Vegetable Production Systems: Overfertilization, Soil Enrichment, and Environmental Implications. Journal of Environmental Quality, 2013, 42, 982-989.1.01412Comparing carbon and nitrogen stocks in paddy and upland soils: Accumulation, stabilization mechanisms, and environmental drivers. Geoderma, 2021, 398, 115121.2.3803Paddy soils have a much higher microbial biomass content than upland soils: A review of the origin, mechanisms, and drivers. Agriculture, Ecosystems and Environment, 2022, 326, 107798.2.5504Carbon and nitrogen availability in paddy soil affects rice photosynthate allocation, microbial community composition, and priming: combining continuous 13C labeling with PLFA analysis. Plant and soil, 2019, 445, 137-152.1.8475Stoichiometric regulation of priming effects and soil carbon balance by microbial life strategies. Soil Biology and Biochemistry, 2022, 169, 108669.4.2456Enhanced topsoil P leaching in a short term flooded calcareous soil with combined straw and ammonium nitrogen incorporation. Geoderma, 2021, 402, 115322.3.9157Anaerobic primed CO2 and CH4 in paddy soil are driven by Fe reduction and stimulated by biochar. Science of the Total Environment, 2022, 808, 151911.3.915	#	Article	IF	Citations
2mechanisms, and environmental drivers. Geoderma, 2021, 398, 115121.2.3803Paddy soils have a much higher microbial biomass content than upland soils: A review of the origin, mechanisms, and drivers.
