#	ARTICLE	IF	CITATIONS
1	Temperature Droop Characteristics of Internal Efficiency in $\text{In}_x\text{Ga}_{1-x}\text{N}/\text{GaN}$ Quantum Well Light-Emitting Diodes. IEEE Photonics Journal, 2014, 6, 1-9.	1.0	1,139
2	Crystal-orientation effects on the piezoelectric field and electronic properties of strained wurtzite semiconductors. Physical Review B, 1999, 59, 4725-4737.	1.1	286
3	Comparison of zinc-blende and wurtzite GaN semiconductors with spontaneous polarization and piezoelectric field effects. Journal of Applied Physics, 2000, 87, 353-364.	1.1	203
4	Piezoelectric effects on electrical and optical properties of wurtzite GaN/AlGaIn quantum well lasers. Applied Physics Letters, 1998, 72, 3103-3105.	1.5	173
5	Spontaneous polarization effects in wurtzite GaN/AlGaIn quantum wells and comparison with experiment. Applied Physics Letters, 2000, 76, 1981-1983.	1.5	141
6	Crystal orientation effects on electronic properties of wurtzite InGaIn/GaN quantum wells. Journal of Applied Physics, 2002, 91, 9904.	1.1	119
7	Electronic and Optical Properties of m_a - and m_m -Plane Wurtzite InGaIn/GaN Quantum Wells. IEEE Journal of Quantum Electronics, 2007, 43, 1175-1182.	1.0	117
8	Spontaneous and piezoelectric polarization effects in wurtzite ZnO/MgZnO quantum well lasers. Applied Physics Letters, 2005, 87, 253509.	1.5	100
9	Optical gain of strained GaAsSb/GaAs quantum-well lasers: A self-consistent approach. Journal of Applied Physics, 2000, 88, 5554-5561.	1.1	84
10	High-efficiency staggered 530 nm InGaIn/InGaIn/GaN quantum-well light-emitting diodes. Applied Physics Letters, 2009, 94, .	1.5	84
11	Dip-shaped InGaIn/GaN quantum-well light-emitting diodes with high efficiency. Applied Physics Letters, 2009, 95, 063507.	1.5	64
12	Many-body optical gain of wurtzite GaN-based quantum-well lasers and comparison with experiment. Applied Physics Letters, 1998, 72, 287-289.	1.5	50
13	Crystal Orientation Effects on Electronic Properties of Wurtzite GaN/AlGaIn Quantum Wells with Spontaneous and Piezoelectric Polarization. Japanese Journal of Applied Physics, 2000, 39, 3478-3482.	0.8	45
14	Cuprous halides semiconductors as a new means for highly efficient light-emitting diodes. Scientific Reports, 2016, 6, 20718.	1.6	37
15	Light emission enhancement in blue InGaAlN/InGaIn quantum well structures. Applied Physics Letters, 2011, 99, .	1.5	35
16	Spontaneous emission rate of green strain-compensated InGaIn/InGaIn LEDs using InGaIn substrate. Physica Status Solidi (A) Applications and Materials Science, 2011, 208, 195-198.	0.8	35
17	Crystal Orientation Effects on Many-Body Optical Gain of Wurtzite InGaIn/GaN Quantum Well Lasers. Japanese Journal of Applied Physics, 2003, 42, L170-L172.	0.8	34
18	Optical and microstructural studies of atomically flat ultrathin In-rich InGaIn/GaN multiple quantum wells. Journal of Applied Physics, 2008, 103, 063509.	1.1	29

#	ARTICLE	IF	CITATIONS
19	Optical gain improvement in type-II InGaN/GaN/Sb/GaN quantum well structures composed of InGaN/and GaNSb layers. Applied Physics Letters, 2010, 96, 051106.	1.5	29
20	Carrier density dependence of polarization switching characteristics of light emission in deep-ultraviolet AlGaIn/AlN quantum well structures. Applied Physics Letters, 2013, 102, .	1.5	29
21	Heat treatment effects on electrical and optical properties of ternary compound In ₂ O ₃ â€ZnO films. Journal of Applied Physics, 2002, 92, 5761-5765.	1.1	27
22	Optical gain in InGaInâ€InGaAlN quantum well structures with zero internal field. Applied Physics Letters, 2008, 92, 171115.	1.5	26
23	Many-body effects on optical gain in strained hexagonal and cubic GaN/AlGaIn quantum well lasers. Applied Physics Letters, 1997, 71, 398-400.	1.5	25
24	Optical properties of type-II InGaIn/GaAsN/GaN quantum wells. Optical and Quantum Electronics, 2009, 41, 779-785.	1.5	25
25	Piezoelectric effects on many-body optical gain of zinc-blende and wurtzite GaN/AlGaIn quantum-well lasers. Applied Physics Letters, 1999, 75, 1354-1356.	1.5	24
26	Effects of Oxygen Concentration on Characteristics of RF-Sputtered In ₂ O ₃ â€ZnO Thin Films. Japanese Journal of Applied Physics, 2001, 40, 1429-1430.	0.8	24
27	Finite element analysis of valence band structures in quantum wires. Journal of Applied Physics, 2004, 96, 2055-2062.	1.1	22
28	Many-body optical gain of GaInNAsâ€GaAs strained quantum-well lasers. Applied Physics Letters, 2004, 85, 890-892.	1.5	21
29	EXTENDED TANH-METHODS AND SOLITONIC SOLUTIONS OF THE GENERAL SHALLOW WATER WAVE MODELS. International Journal of Modern Physics C, 2004, 15, 363-370.	0.8	21
30	Numerical Analysis of Multilayer Organic Light-Emitting Diodes. Journal of Lightwave Technology, 2007, 25, 2828-2836.	2.7	20
31	Electronic and optical properties of staggered InGaIn/InGaIn quantum-well light-emitting diodes. Physica Status Solidi (A) Applications and Materials Science, 2009, 206, 2637-2640.	0.8	20
32	Optical gain characteristics of non-polar Al-rich AlGaIn/AlN quantum well structures. Journal of Applied Physics, 2011, 110, 063105.	1.1	20
33	Strain and piezoelectric potential effects on optical properties in CdSe/CdS core/shell quantum dots. Journal of Applied Physics, 2011, 109, .	1.1	18
34	High-efficiency BAInGaIn/AlN quantum well structures for optoelectronic applications in ultraviolet spectral region. Optics Express, 2015, 23, 3623.	1.7	18
35	Crystal orientation effects on electronic and optical properties of wurtzite ZnO/MgZnO quantum well lasers. Optical and Quantum Electronics, 2007, 38, 935-952.	1.5	17
36	Internal field engineering in CdZnO/MgZnO quantum well structures. Applied Physics Letters, 2009, 94, .	1.5	16

#	ARTICLE	IF	CITATIONS
37	Optical Gain in GaN Quantum Well Lasers with Quaternary AlInGaN Barriers. Japanese Journal of Applied Physics, 2005, 44, 7460-7463.	0.8	15
38	Piezoelectric and Spontaneous Polarization Effects on Many-Body Optical Gain of Wurtzite InGaN/GaN Quantum Well with Arbitrary Crystal Orientation. Japanese Journal of Applied Physics, 2003, 42, 5052-5055.	0.8	13
39	Internal field effects on electronic and optical properties of ZnO/BeZnO quantum well structures. Physica B: Condensed Matter, 2014, 441, 12-16.	1.3	13
40	On the Theory of Optical Gain of Strained-Layer Hexagonal and Cubic GaN Quantum-Well Lasers. Japanese Journal of Applied Physics, 1996, 35, 6079-6083.	0.8	11
41	Effect of (101̄ ₁ ,0) crystal orientation on many-body optical gain of wurtzite InGaN/GaN quantum well. Journal of Applied Physics, 2003, 93, 9665-9668.	1.1	11
42	Highly polarized photoluminescence from c-plane InGaN/GaN multiple quantum wells on stripe-shaped cavity-engineered sapphire substrate. Scientific Reports, 2019, 9, 8282.	1.6	11
43	Spontaneous Polarization and Piezoelectric Effects on Inter-Subband Scattering Rate in Wurtzite GaN/AlGaIn Quantum-Well. Japanese Journal of Applied Physics, 2001, 40, L941-L944.	0.8	10
44	Comparison of light emission in InGaN/GaN light-emitting diodes with graded, triangular, and parabolic quantum-well structures. Journal of the Korean Physical Society, 2012, 60, 505-508.	0.3	10
45	Temperature characteristics of spontaneous emission and optical gain in blue InGaN/GaN quantum well structures. Journal of Applied Physics, 2013, 114, .	1.1	10
46	Quantum efficiency affected by localized carrier distribution near the V-defect in GaN based quantum well. Applied Physics Letters, 2013, 103, .	1.5	10
47	Theoretical Studies on TM-Polarized Light Emission for Ultraviolet AlGaIn/AlN Optoelectronic Devices. IEEE Photonics Technology Letters, 2016, 28, 2153-2155.	1.3	10
48	Piezoelectric and spontaneous polarization effects on exciton binding energy and light emission properties of wurtzite ZnO/MgO quantum dots. Solid State Communications, 2017, 261, 21-25.	0.9	10
49	Screening Effects on Electron-Longitudinal Optical-Phonon Intersubband Scattering in Wide Quantum Well and Comparison with Experiment. Japanese Journal of Applied Physics, 2000, 39, 6601-6605.	0.8	9
50	Intersubband transition in lattice-matched B _{0.5} GaN/AlN quantum well structures with high absorption coefficients. Optics Express, 2017, 25, 3143.	1.7	9
51	Many-body optical gain of (101̄ ₁ ,0) wurtzite GaN/AlGaIn quantum-well lasers. Applied Physics Letters, 2000, 77, 4095-4097.	1.5	8
52	Intraband relaxation time in wurtzite InGaN/GaN quantum-well structures with (101̄ ₁ ,0) crystal orientation. Applied Physics Letters, 2002, 80, 2830-2832.	1.5	8
53	High optical polarization ratio of semipolar (202̂ ⁻ 1̂ ⁻)-oriented InGaN/GaN quantum wells and comparison with experiment. Journal of Applied Physics, 2012, 112, .	1.1	8
54	High-efficiency InGaN/GaN light-emitting diodes with electron injector. Semiconductor Science and Technology, 2012, 27, 115003.	1.0	8

#	ARTICLE	IF	CITATIONS
55	Polarization characteristics of semipolar (112̄,2) InGaN/GaN quantum well structures grown on relaxed InGaN buffer layers and comparison with experiment. Optics Express, 2014, 22, 14850.	1.7	8
56	Optical Properties of Strained CdZnTe/ZnTe Quantum Dots. Journal of the Korean Physical Society, 2009, 55, 2517-2521.	0.3	8
57	Al Composition Dependence of the Optical Gain Characteristics of a-plane Al-rich AlGaN/AlN Quantum-well Structures. Journal of the Korean Physical Society, 2011, 59, 357-361.	0.3	8
58	Theoretical investigation of gain and linewidth enhancement factor for 1.55-μm tensile strained quantum-well lasers. Journal of Lightwave Technology, 1997, 15, 711-716.	2.7	7
59	Reduction of as carryover by PH3 overpressure in metalorganic vapor-phase epitaxy. Journal of Crystal Growth, 1997, 179, 26-31.	0.7	7
60	Electronic Properties of InGaAs/GaAs Strained Coupled Quantum Dots Modeled by Eight-Band k·p Theory. Japanese Journal of Applied Physics, 2003, 42, 144-149.	0.8	7
61	Exciton Binding Energies in Zincblende GaN/AlGaN Quantum Wells. Japanese Journal of Applied Physics, 2004, 43, 140-143.	0.8	7
62	Mole Fraction Effect on the Interband Transition Energy of CdTe/Cd _x Zn _{1-x} Te Nanostructures. Journal of the Korean Physical Society, 2010, 57, 178-182.	0.3	7
63	Intraband Relaxation Time in Wurtzite GaN/InAlN Quantum-Well. Japanese Journal of Applied Physics, 1999, 38, L815-L818.	0.8	6
64	Crystal orientation dependence of many-body optical gain in wurtzite GaN/AlGaN quantum-well lasers. Semiconductor Science and Technology, 2002, 17, 686-691.	1.0	6
65	Intraband relaxation time in InGaNs quantum-well lasers and comparison with experiment. Physica Status Solidi (B): Basic Research, 2005, 242, 1022-1026.	0.7	6
66	Spontaneous emission and optical gain characteristics of blue InGaAlN/InGaN quantum well structures with reduced internal field. Journal of Applied Physics, 2012, 112, 043107.	1.1	6
67	Partial strain relaxation effects on polarization anisotropy of semipolar (112̄) InGaN/GaN quantum well structures. Applied Physics Letters, 2013, 103, 221108.	1.5	6
68	Strong and robust polarization anisotropy of site- and size-controlled single InGaN/GaN quantum wires. Scientific Reports, 2020, 10, 15371.	1.6	6
69	High Temperature Characteristics of Strained InGaAs/InGaAlAs Quantum Well Lasers. Japanese Journal of Applied Physics, 1997, 36, 3528-3530.	0.8	5
70	Non-Markovian gain and luminescence of an InGaN-AlInGaN quantum-well with many-body effects. IEEE Journal of Quantum Electronics, 2005, 41, 1253-1259.	1.0	5
71	Theoretical studies on the two-dimensional electron-gas properties of MgZnO/MgO/ZnO heterostructures. Journal of the Korean Physical Society, 2016, 69, 96-98.	0.3	5
72	Effects of Modulation Doping on the Optical Properties of a Type-II 1.55-μm GaAsSb/InGaNs/GaAs Trilayer Quantum-Well Structure. Journal of the Korean Physical Society, 2010, 57, 826-828.	0.3	5

#	ARTICLE	IF	CITATIONS
73	Bandgap Effects of Quantum Well Active-Layer on Threshold Current Density, Differential Gain and Temperature Characteristics of 1.3 μm InGaAlAs/InP Quantum Well Lasers. Japanese Journal of Applied Physics, 2002, 41, 1354-1358.	0.8	4
74	Optical anisotropy in nonpolar (10 $\bar{1}$,0)-oriented m-plane GaN/AlGaIn quantum wells and comparison with experiment. Applied Physics A: Materials Science and Processing, 2008, 91, 361-364.	1.1	4
75	Strain relaxation effect on electronic properties of compressively strained InGaAs/InP vertically stacked multiple quantum wires. Journal of Applied Physics, 2010, 108, 023104.	1.1	4
76	Optical Emission Characteristics of Pseudopolarization-Matched Green AlInGaIn/InGaIn Quantum Well Structures. IEEE Journal of Selected Topics in Quantum Electronics, 2013, 19, 1-8.	1.9	4
77	Effects of wetting layer on exciton binding energy of strained CdTe/ZnTe pyramidal quantum dots. Solid State Communications, 2015, 204, 61-63.	0.9	4
78	Effect of boron incorporation on light emission characteristics of UV AlGaIn/AlIn quantum well structures. Applied Physics Express, 2016, 9, 021001.	1.1	4
79	Strain and built-in fields in wurtzite GaN/AlIn λ^x N quantum wells and quantum dots. Superlattices and Microstructures, 2018, 120, 611-615.	1.4	4
80	Control of the 3-Fold Symmetric Shape of Group III-Nitride Quantum Dots: Suppression of Fine-Structure Splitting. Nano Letters, 2020, 20, 8461-8468.	4.5	4
81	Optical Gain Characteristics in 1.55- μm GaAsSbN/GaAs Quantum Well Structures. Journal of the Korean Physical Society, 2007, 50, 1152.	0.3	4
82	Optical Gain in Wurtzite ZnO/ZnMgO Quantum Well Lasers. Japanese Journal of Applied Physics, 2005, 44, L1403-L1406.	0.8	3
83	Electronic and optical properties of 530 nm strain-compensated hybrid InGaIn/InGaIn/ZnO quantum well light-emitting diodes. Journal of Applied Physics, 2008, 104, 036106.	1.1	3
84	Intersubband nonlinear optical rectification in CdTe/Zn λ^x Te/ZnTe asymmetric rectangular quantum wells. Journal of the Korean Physical Society, 2012, 61, 1080-1082.	0.3	3
85	Structural effects on the electronic properties of vertically-coupled CdTe/ZnTe quantum-dot molecules. Journal of the Korean Physical Society, 2012, 61, 2036-2041.	0.3	3
86	Characteristics of built-in polarization potentials in vertically and laterally arranged InGaIn/GaN quantum dots. Journal of Applied Physics, 2012, 112, .	1.1	3
87	Optical polarization characteristics of m-plane InGaIn/GaN quantum well structures and comparison with experiment. Applied Physics Letters, 2013, 103, 101107.	1.5	3
88	Hybrid InGaIn/CdZnO quantum well structures for optoelectronic applications in the short wavelength spectral region. Physica Status Solidi (B): Basic Research, 2013, 250, 378-381.	0.7	3
89	Theoretical study of a two-dimensional electron gas in wurtzite ZnO/MgZnO heterostructures and comparison with experiment. Journal of the Korean Physical Society, 2015, 67, 1844-1847.	0.3	3
90	Effects of AlGaIn delta-layer insertion on light emission characteristics of ultraviolet AlGaIn/AlIn quantum well structures. Physica Status Solidi (B): Basic Research, 2015, 252, 1844-1847.	0.7	3

#	ARTICLE	IF	CITATIONS
91	Quaternary AlInGaN/InGaN quantum well on vicinal c-plane substrate for high emission intensity of green wavelengths. Journal of Applied Physics, 2015, 117, 185707. Polarization characteristics of 480-680 nm (1.1) Tj ETQq0.0.0 rgBT /Overlock 10 Tf 50 722 Td (xmlns:mml="http://www.w	1.1	3
92	InGaN/GaN quantum well structures with strain relaxation effects. Superlattices and Microstructures, 2015, 86, 531-535.	1.4	3
93	Theoretical studies on light emission characteristics of high-efficiency BInGaN/GaN quantum well structures with blue spectral range. Superlattices and Microstructures, 2016, 96, 150-154.	1.4	3
94	Intersubband absorption coefficients of GaN/AlN and strain-compensated InGaN/InAlN quantum well structures. Superlattices and Microstructures, 2016, 100, 508-513.	1.4	3
95	Effects of a delta-layer insertion on the ultraviolet light emission characteristics of III-nitride quantum well structures. Superlattices and Microstructures, 2017, 112, 665-670.	1.4	3
96	Intersubband absorption of p-type wurtzite GaN/AlN quantum well for fiber-optics telecommunication. Journal of Applied Physics, 2017, 122, 184303.	1.1	3
97	Lattice-matched double dip-shaped BAIGaN/AlN quantum well structures for ultraviolet light emission devices. Superlattices and Microstructures, 2018, 117, 413-417.	1.4	3
98	Substrate dependence of TM-polarized light emission characteristics of BAIGaN/AlN quantum wells. Optics Communications, 2018, 417, 76-78.	1.0	3
99	Simulation studies on guard ring effects on edge breakdown suppression of InGaAs/InP avalanche photodiodes. Japanese Journal of Applied Physics, 2018, 57, 106506.	0.8	3
100	Anisotropic strain effects on light emission characteristics of CdZnO/ZnO quantum well structures. Physics Letters, Section A: General, Atomic and Solid State Physics, 2019, 383, 125995.	0.9	3
101	A broadband ultraviolet light source using GaN quantum dots formed on hexagonal truncated pyramid structures. Nanoscale Advances, 2020, 2, 1449-1455.	2.2	3
102	Optical anisotropy in type-II (110)-oriented GaAsSb/GaAs quantum wells. Solid State Communications, 2020, 314-315, 113934.	0.9	3
103	Linewidth enhancement factor of hybrid green InGaN/MgZnO quantum well structures. Physica E: Low-Dimensional Systems and Nanostructures, 2021, 130, 114678.	1.3	3
104	Intraband Relaxation Time in Short-wavelength II-VI CdZnSe/ZnSe Quantum-well Structures. Journal of the Korean Physical Society, 2009, 55, 671-674.	0.3	3
105	High temperature characteristics of strained InGaAs/InGaAsP quantum well lasers lattice matched to GaAs. IEEE Photonics Technology Letters, 1994, 6, 1297-1299.	1.3	2
106	Structural Dependence of Electronic Properties in (10-10) Wurtzite GaN/AlGaIn Quantum Wells. Japanese Journal of Applied Physics, 2002, 41, 2084-2089.	0.8	2
107	Spontaneous and piezoelectric polarization effects on linewidth enhancement factor of wurtzite InGaN/GaN quantum-well lasers. Physica Status Solidi A, 2003, 198, 336-342.	1.7	2
108	Enhancement of optical gain in Li: CdZnO/ZnMgO quantum well lasers. Physica E: Low-Dimensional Systems and Nanostructures, 2010, 42, 2652-2654.	1.3	2
