| #  | Article                                                                                                                                                                                                                                             | IF   | CITATIONS |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 1  | DNMT1-interacting RNAs block gene-specific DNA methylation. Nature, 2013, 503, 371-376.                                                                                                                                                             | 13.7 | 446       |
| 2  | Preclinical Rationale for Use of the Clinically Available Multitargeted Tyrosine Kinase Inhibitor<br>Crizotinib in ROS1-Translocated Lung Cancer. Journal of Thoracic Oncology, 2012, 7, 1086-1090.                                                 | 0.5  | 148       |
| 3  | Treatment of Chronic Myelogenous Leukemia by Blocking Cytokine Alterations Found in Normal Stem and Progenitor Cells. Cancer Cell, 2015, 27, 671-681.                                                                                               | 7.7  | 112       |
| 4  | Dual ALK and EGFR inhibition targets a mechanism of acquired resistance to the tyrosine kinase inhibitor crizotinib in ALK rearranged lung cancer. Lung Cancer, 2014, 83, 37-43.                                                                    | 0.9  | 86        |
| 5  | Intraoperative bleeding during vitrectomy for diabetic tractional retinal detachment with versus<br>without preoperative intravitreal bevacizumab (IBeTra study). British Journal of Ophthalmology, 2009,<br>93, 688-691.                           | 2.1  | 79        |
| 6  | Determination of P-glycoprotein, MDR-related protein 1, breast cancer resistance protein, and<br>lung-resistance protein expression in leukemic stem cells of acute myeloid leukemia. Cytometry Part B -<br>Clinical Cytometry, 2008, 74B, 163-168. | 0.7  | 67        |
| 7  | Targeted BMI1 inhibition impairs tumor growth in lung adenocarcinomas with low CEBPα expression.<br>Science Translational Medicine, 2016, 8, 350ra104.                                                                                              | 5.8  | 45        |
| 8  | Halofuginone Has Anti-Proliferative Effects in Acute Promyelocytic Leukemia by Modulating the<br>Transforming Growth Factor Beta Signaling Pathway. PLoS ONE, 2011, 6, e26713.                                                                      | 1.1  | 34        |
| 9  | PRAME is a membrane and cytoplasmic protein aberrantly expressed in chronic lymphocytic leukemia and mantle cell lymphoma. Leukemia Research, 2006, 30, 1333-1339.                                                                                  | 0.4  | 31        |
| 10 | Philadelphia-negative myeloproliferative neoplasms as disorders marked by cytokine modulation.<br>Hematology, Transfusion and Cell Therapy, 2018, 40, 120-131.                                                                                      | 0.1  | 30        |
| 11 | The presence of CD56/CD16 in Tâ€cell acute lymphoblastic leukaemia correlates with the expression of cytotoxic molecules and is associated with worse response to treatment. British Journal of Haematology, 2009, 144, 223-229.                    | 1.2  | 26        |
| 12 | Methionine-induced hyperhomocysteinemia reverts fibrinolytic pathway activation in a murine model of acute promyelocytic leukemia. Blood, 2012, 120, 207-213.                                                                                       | 0.6  | 20        |
| 13 | Identification and Characterization of ALK Kinase Splicing Isoforms in Non–Small-Cell Lung Cancer.<br>Journal of Thoracic Oncology, 2014, 9, 248-253.                                                                                               | 0.5  | 15        |
| 14 | Halofuginone inhibits phosphorylation of SMAD-2 reducing angiogenesis and leukemia burden in an<br>acute promyelocytic leukemia mouse model. Journal of Experimental and Clinical Cancer Research,<br>2015, 34, 65.                                 | 3.5  | 15        |
| 15 | Metformin exerts multitarget antileukemia activity in JAK2V617F-positive myeloproliferative neoplasms.<br>Cell Death and Disease, 2018, 9, 311.                                                                                                     | 2.7  | 14        |
| 16 | The co-expression of PML/RAR alpha and AML1/ETO fusion genes is associated with ATRA resistance.<br>British Journal of Haematology, 2005, 128, 407-409.                                                                                             | 1.2  | 11        |
| 17 | Results of FLT3 mutation screening and correlations with immunophenotyping in 169 Brazilian patients with acute myeloid leukemia. Annals of Hematology, 2010, 89, 225-228.                                                                          | 0.8  | 11        |
| 18 | Bone Marrow Soluble Mediator Signatures of Patients With Philadelphia Chromosome-Negative<br>Myeloproliferative Neoplasms. Frontiers in Oncology, 2021, 11, 665037.                                                                                 | 1.3  | 10        |

| #  | Article                                                                                                                                                                                         | IF  | CITATIONS |
|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 19 | Granulocyte colony-stimulating factor and leukemogenesis. Mediators of Inflammation, 2004, 13, 145-150.                                                                                         | 1.4 | 9         |
| 20 | Management of acute colorectal diseases in febrile neutropenic patients. Journal of Coloproctology, 2014, 34, 189-192.                                                                          | 0.1 | 8         |
| 21 | NT157, an IGF1R-IRS1/2 inhibitor, exhibits antineoplastic effects in pre-clinical models of chronic myeloid leukemia. Investigational New Drugs, 2021, 39, 736-746.                             | 1.2 | 7         |
| 22 | The effect of intravitreal ranibizumab on intraoperative bleeding during pars plana vitrectomy for diabetic traction retinal detachment. British Journal of Ophthalmology, 2011, 95, 1337-1339. | 2.1 | 6         |
| 23 | C/EBPÎ <sup>3</sup> is dispensable for steady-state and emergency granulopoiesis. Haematologica, 2018, 103, e331-e335.                                                                          | 1.7 | 6         |
| 24 | Improved hematopoietic stem cell transplantation upon inhibition of natural killer cell-derived interferon-gamma. Stem Cell Reports, 2021, 16, 1999-2013.                                       | 2.3 | 6         |
| 25 | STMN1 is highly expressed and contributes to clonogenicity in acute promyelocytic leukemia cells.<br>Investigational New Drugs, 2022, 40, 438-452.                                              | 1.2 | 6         |
| 26 | Clinical and molecular profile of a Brazilian cohort of patients with classical BCR-ABL1-negative myeloproliferative neoplasms. Hematology, Transfusion and Cell Therapy, 2020, 42, 238-244.    | 0.1 | 5         |
| 27 | Coâ€occurrence of BCR–ABL1â€positive chronic myeloid leukaemia and CALRâ€mutated essential<br>thrombocythaemia. British Journal of Haematology, 2020, 188, e21-e23.                             | 1.2 | 5         |
| 28 | Crosstalk between BCR-ABL and protease-activated receptor 1 (PAR1) suggests a novel target in chronic myeloid leukemia. Experimental Hematology, 2018, 66, 50-62.                               | 0.2 | 4         |
| 29 | Differential cytokine network profile in polycythemia vera and secondary polycythemia. Scientific<br>Reports, 2020, 10, 7032.                                                                   | 1.6 | 4         |
| 30 | Abstract 23: Sensitivity ofEGFRexon 20 insertion mutations to EGFR inhibitors is determined by their location within the tyrosine kinase domain of EGFR. , 2012, , .                            |     | 4         |
| 31 | Decreased Activity of NK Cells in Myeloproliferative Neoplasms. Blood, 2015, 126, 1637-1637.                                                                                                    | 0.6 | 3         |
| 32 | Obatoclax reduces cell viability of acute myeloid leukemia cell lines independently of their sensitivity<br>to venetoclax. Hematology, Transfusion and Cell Therapy, 2021, 44, 124-124.         | 0.1 | 2         |
| 33 | Sensitivity to EGFR inhibitors based on location of EGFR exon 20 insertion mutations within the tyrosine kinase domain of EGFR Journal of Clinical Oncology, 2012, 30, 7523-7523.               | 0.8 | 2         |
| 34 | NSD1 and NSD2 Transcriptional Levels Might Predict Clinical Outcome in AML Patients. Blood, 2018, 132, 5257-5257.                                                                               | 0.6 | 2         |
| 35 | Bioactive Lipids as Chronic Myeloid Leukemia's Potential Biomarkers for Disease Progression and<br>Response to Tyrosine Kinase Inhibitors. Frontiers in Immunology, 2022, 13, 840173.           | 2.2 | 2         |
| 36 | Insertion (15;14)(q22;q13q32) in a case of Ph+ ALL. Cancer Genetics and Cytogenetics, 2008, 185, 65-67.                                                                                         | 1.0 | 1         |

|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 37 | Identification of a new translocation that disrupts the RUNX1 gene in a patient with de novo acute myeloid leukemia. Medical Oncology, 2012, 29, 1114-1118.                                                                                                                                              | 1.2 | 1         |
| 38 | Halofuginone Exerts Antiproliferative and Antiangiogenic Actions on Acute Promyelocytic Leukemia<br>Cells through Modulation of the TGFβ Pathway Blood, 2007, 110, 2850-2850.                                                                                                                            | 0.6 | 1         |
| 39 | The Use of Cyclosporine in Association with Chemotherapy As Induction Treatment in Patients with<br>Acute Myeloid Leukemia (AML) and High Rhodamine Efflux at Diagnosis Results in Higher Complete<br>Hematological Remission Rates, but Does Not Prolong Overall Survival. Blood, 2015, 126, 4896-4896. | 0.6 | 1         |
| 40 | C/Ebpg (CCAAT/Enhancer Binding Protein Gamma) Balances Cytotoxic and Secretory Potential of<br>Natural Killer Cells. Blood, 2018, 132, 3721-3721.                                                                                                                                                        | 0.6 | 1         |
| 41 | Metformin Suppress Cellular and Molecular Processes Related to Maintenance and Proliferation of<br>Myeloproliferative Neoplasm Stem Cell. Blood, 2019, 134, 1682-1682.                                                                                                                                   | 0.6 | 1         |
| 42 | Suppression of multiple antiâ€apoptotic BCL2 family proteins recapitulates the effects of JAK2 inhibitors<br>in JAK2V617F driven myeloproliferative neoplasms. Cancer Science, 2021, , .                                                                                                                 | 1.7 | 1         |
| 43 | Hippo pathway-related genes expression is deregulated in myeloproliferative neoplasms. Medical<br>Oncology, 2022, 39, .                                                                                                                                                                                  | 1.2 | 1         |
| 44 | Co-existence of t(6;13)(p21;q14.1) and trisomy 12 in chronic lymphocytic leukemia. Medical Oncology, 2012, 29, 1227-1230.                                                                                                                                                                                | 1.2 | 0         |
| 45 | The application of an integrated clinical, cytogenetic, and molecular risk stratification for acute<br>myeloid leukemia patients using a central laboratory in a Brazilian multicentric study. Blood<br>Advances, 2017, 1, 86-89.                                                                        | 2.5 | 0         |
| 46 | Feasibility of minimal residual disease studies by multiparametric flow cytometry for acute myeloid<br>leukemia in a developing country. Blood Advances, 2017, 1, 80-83.                                                                                                                                 | 2.5 | 0         |
| 47 | Differential Expression of P-Glycoprotein, but Not of MRP, LRP and BCRP in Leukemic Stem Cells<br>Compared to More Differentiated CD34+ CD38+ Acute Myeloid Leukemia Blasts Blood, 2006, 108,<br>2360-2360.                                                                                              | 0.6 | 0         |
| 48 | Analysis of the Crosstalk Between TGF-β–VEGF-Angiogenesis in an In Vivo Model of Acute Promyelocytic<br>Leukemia. Blood, 2010, 116, 1845-1845.                                                                                                                                                           | 0.6 | 0         |
| 49 | Flow Cytometry Quantification of Leukemic Stem Cells Is Associated with Risk Stratification and May<br>Be Useful for Minimal Residual Disease in Acute Myeloid Leukemia. Blood, 2011, 118, 1470-1470.                                                                                                    | 0.6 | 0         |
| 50 | Abstract 4445: Dual ALK and EGFR inhibition targets a mechanism of acquired resistance to the tyrosine kinase inhibitor crizotinib in ALK translocated lung cancer , 2013, , .                                                                                                                           |     | 0         |
| 51 | Dysregulation Of Bcl2 Family Proteins Induced By JAK2V617F Mutation Contributes To The Abnormal Expansion Of Neoplastic Initiating Cells. Blood, 2013, 122, 2852-2852.                                                                                                                                   | 0.6 | 0         |
| 52 | Cytokine-Mediated Natural Killer Cells Effects Impair Hematopoietic Stem Cell Function. Blood, 2016, 128, 2641-2641.                                                                                                                                                                                     | 0.6 | 0         |
| 53 | Multitarget Antileukemic Effects of Metformin in Myeloproliferative Neoplasm Cells: Inhibition of JAK2/STAT Signaling and Mitochondrial Activity. Blood, 2016, 128, 1960-1960.                                                                                                                           | 0.6 | 0         |
| 54 | Nuclear SET Domain (NSD) Protein Lysine Methyltransferases (KMT) Family Members Expression in<br>Acute Myeloid Leukemia. Blood, 2016, 128, 5097-5097.                                                                                                                                                    | 0.6 | 0         |
