#	ARTICLE	IF	CITATIONS
1	Pesticide- ϵ conjugated polyacrylate nanoparticles: novel opportunities for improving the photostability of emamectin benzoate. <i>Polymers for Advanced Technologies</i> , 2013, 24, 137-143.	1.6	41
2	Fabrication and evaluation of a novel polymeric hydrogel of carboxymethyl chitosan-g-polyacrylic acid (CMC-g-PAA) for oral insulin delivery. <i>RSC Advances</i> , 2016, 6, 52858-52867.	1.7	29
3	Development and evaluation of a novel polymeric hydrogel of sucrose acrylate-co-polymethylacrylic acid for oral curcumin delivery. <i>Journal of Biomaterials Science, Polymer Edition</i> , 2017, 28, 194-206.	1.9	18
4	Insulin-loaded hydroxypropyl methyl cellulose-co-polyacrylamide-co-methacrylic acid hydrogels used as rectal suppositories to regulate the blood glucose of diabetic rats. <i>International Journal of Biological Macromolecules</i> , 2019, 121, 1346-1353.	3.6	17
5	Preliminary studies on pH-sensitive hydrogels and <i>in vitro</i> release profiles of two model drugs. <i>Journal of Biomaterials Science, Polymer Edition</i> , 2013, 24, 1459-1471.	1.9	14
6	The binary complex of poly(PEGMA-co-MAA) hydrogel and PLGA nanoparticles as a novel oral drug delivery system for ibuprofen delivery. <i>Journal of Biomaterials Science, Polymer Edition</i> , 2017, 28, 1874-1887.	1.9	14
7	Influence of drying processes on the structures, morphology and <i>in vitro</i> release profiles of risperidone-loaded PLGA microspheres. <i>Journal of Microencapsulation</i> , 2019, 36, 21-31.	1.2	9
8	Preparation of acrylic/acrylate copolymeric surfactants by emulsion polymerization used in pesticide oil-in-water emulsions. <i>Journal of Applied Polymer Science</i> , 2012, 123, 3117-3127.	1.3	8
9	Synthesis and performance of pH-sensitive hydrogel microspheres and <i>in vitro</i> evaluation as potential drug carriers. <i>Microsystem Technologies</i> , 2015, 21, 2287-2296.	1.2	8
10	Fabrication, characterization, and controlled release of eprinomectin from injectable mesoporous PLGA microspheres. <i>RSC Advances</i> , 2015, 5, 75025-75032.	1.7	7
11	Release profile of insulin from pH-sensitive hydrogel and its hypoglycemic effect by oral administration. <i>Journal of Biomaterials Science, Polymer Edition</i> , 2016, 27, 86-96.	1.9	7
12	Manufacture, Characterization, and Release Profiles of Insulin-Loaded Mesoporous PLGA Microspheres. <i>Materials and Manufacturing Processes</i> , 2016, 31, 1061-1065.	2.7	7
13	<i>In vitro</i> evaluation of sustained release of risperidone-loaded microspheres fabricated from different viscosity of PLGA polymers. <i>Polymers for Advanced Technologies</i> , 2018, 29, 384-393.	1.6	7
14	Preparation of abamectin-loaded porous acrylic resin and controlled release studies. <i>Iranian Polymer Journal (English Edition)</i> , 2012, 21, 731-738.	1.3	5
15	Synthesis, characterization and release profiles of nanoparticles self-assembled from poly(PEGMA-co-MMA-co-acryloyl- β -CD) copolymers. <i>Surface and Interface Analysis</i> , 2015, 47, 270-277.	0.8	4
16	Polyelectrolyte Complex Nanoparticles Based on Methoxy Poly(Ethylene Glycol)-B-Poly(β -Caprolactone) Carboxylates and Chitosan for Delivery of Tolbutamide. <i>Journal of Biomaterials Science, Polymer Edition</i> , 2018, 29, 1799-1811.	1.9	4
17	Synthesis and Performance of pH-Sensitive Hydrogel Microspheres and <i>In Vitro</i> Evaluation as Potential Drug Carriers. <i>Advanced Materials Research</i> , 0, 936, 751-756.	0.3	2
18	Fabrication of PLGA <i>in situ</i> forming implants and study on their correlation of <i>in vitro</i> release profiles with <i>in vivo</i> performances. <i>Journal of Biomaterials Science, Polymer Edition</i> , 2021, 32, 994-1008.	1.9	2
