#	Article	IF	Citations
1	Cubic spline interpolation of functions with high gradients in boundary layers. Computational Mathematics and Mathematical Physics, 2017, 57, 7-25.	0.8	21
2	Spline interpolation on a uniform grid for functions with a boundary-layer component. Computational Mathematics and Mathematical Physics, 2010, 50, 211-223.	0.8	16
3	A two-grid method for elliptic problem with boundary layers. Applied Numerical Mathematics, 2015, 93, 270-278.	2.1	12
4	Lagrange interpolation and Newton-Cotes formulas for functions with boundary layer components on piecewise-uniform grids. Numerical Analysis and Applications, 2015, 8, 235-247.	0.4	11
5	Quadrature formulas for functions with a boundary-layer component. Computational Mathematics and Mathematical Physics, 2011, 51, 1837-1846.	0.8	10
6	Two-grid Algorithms for The Solution of 2D Semilinear Singularly-perturbed Convection-diffusion Equations Using an Exponential Finite Difference Scheme. , 2009, , .		8
7	Parabolic spline interpolation for functions with large gradient in the boundary layer. Siberian Mathematical Journal, 2017, 58, 578-590.	0.6	8
8	On the Parameter-Uniform Convergence of Exponential Spline Interpolation in the Presence of a Boundary Layer. Computational Mathematics and Mathematical Physics, 2018, 58, 348-363.	0.8	8
9	Solving a second-order nonlinear singular perturbation ordinary differential equation by a Samarskii scheme. Numerical Analysis and Applications, 2013, 6, 9-23.	0.4	7
10	Interpolation of a function of two variables with large gradients in boundary layers. Lobachevskii Journal of Mathematics, 2016, 37, 349-359.	0.9	7
11	On the uniform convergence of parabolic spline interpolation on the class of functions with large gradients in the boundary layer. Numerical Analysis and Applications, 2017, 10, 108-119.	0.4	6
12	Approximation of a Function and Its Derivatives on the Basis of Cubic Spline Interpolation in the Presence of a Boundary Layer. Computational Mathematics and Mathematical Physics, 2019, 59, 343-354.	0.8	6
13	Analogue of Newton–Cotes formulas for numerical integration of functions with a boundary-layer component. Computational Mathematics and Mathematical Physics, 2016, 56, 358-366.	0.8	5
14	Adaptive formulas of numerical differentiation of functions with large gradients. Journal of Physics: Conference Series, 2019, 1260, 042003.	0.4	5
15	Numerical solution of the third boundary value problem for an equation with a small parameter. USSR Computational Mathematics and Mathematical Physics, 1984, 24, 28-33.	0.0	4
16	Refined-mesh interpolation method for functions with a boundary-layer component. Computational Mathematics and Mathematical Physics, 2008, 48, 1634-1645.	0.8	4
17	An analogue of the four-point Newton-Cotes formula for a function with a boundary-layer component. Numerical Analysis and Applications, 2013, 6, 268-278.	0.4	4
18	Interpolation Method for a Function with a Singular Component. Lecture Notes in Computer Science, 2009, , 612-619.	1.3	4

#	Article	IF	Citations
19	Two-grid Interpolation Algorithms for Difference Schemes of Exponential Type for Semilinear Diffusion Convection-Dominated Equations. , 2008, , .		3
20	Analysis of a difference scheme for a singular perturbation Cauchy problem on refined grids. Numerical Analysis and Applications, 2011, 4, 36-45.	0.4	3
21	Difference Scheme on a Uniform Grid for the Singularly Perturbed Cauchy Problem. Journal of Mathematical Sciences, 2013, 195, 865-872.	0.4	3
22	A two-grid method with Richardson extrapolation for a semilinear convection-diffusion problem. AIP Conference Proceedings, 2015, , .	0.4	3
23	Analysis of Numerical Differentiation Formulas in a Boundary Layer on a Shishkin Grid. Numerical Analysis and Applications, 2018, 11, 193-203.	0.4	3
24	Quadrature Formula with Five Nodes for Functions with a Boundary Layer Component. Lecture Notes in Computer Science, 2013, , 540-546.	1.3	3
25	A Two-Grid Algorithm for Solution of the Difference Equations of a System of Singularly Perturbed Semilinear Equations. Lecture Notes in Computer Science, 2009, , 580-587.	1.3	2
26	Non-Polynomial Interpolation of Functions with Large Gradients and Its Application. Computational Mathematics and Mathematical Physics, 2021, 61, 167-176.	0.8	2
27	A Method of Lines Approach to the Numerical Solution of Singularly Perturbed Elliptic Problems. Lecture Notes in Computer Science, 2001, , 451-458.	1.3	2
28	The Analysis of Lagrange Interpolation for Functions with a Boundary Layer Component. Lecture Notes in Computer Science, 2015, , 426-432.	1.3	2
29	Approaches to constructing two-dimensional interpolation formulas in the presence of boundary layers. Journal of Physics: Conference Series, 2022, 2182, 012036.	0.4	2
30	On the numerical solution of equations with a small parameter in the highest derivative. USSR Computational Mathematics and Mathematical Physics, 1983, 23, 66-71.	0.0	1
31	Cubature formulas for a two-variable function with boundary-layer components. Computational Mathematics and Mathematical Physics, 2013, 53, 1808-1818.	0.8	1
32	Analysis of polynomial interpolation of the function of two variables with large gradients in the parabolic boundary layers. AIP Conference Proceedings, 2016, , .	0.4	1
33	An application of the exponential spline for the approximation of a function and its derivatives in the presence of a boundary layer. Journal of Physics: Conference Series, 2018, 1050, 012012.	0.4	1
34	Approaches to the calculation of derivatives of functions with large gradients in the boundary layer under the values at the grid nodes. Journal of Physics: Conference Series, 2019, 1158, 022029.	0.4	1
35	An application of the cubic spline on Shishkin mesh for the approximation of a function and its derivatives in the presence of a boundary layer. Journal of Physics: Conference Series, 2019, 1210, 012017.	0.4	1
36	Application a cubic spline to calculate derivatives in the presence of a boundary layer. Journal of Physics: Conference Series, 2021, 1791, 012069.	0.4	1

#	Article	IF	Citations
37	Application of Cubic Splines on Bakhvalov Meshes in the Case of a Boundary Layer. Computational Mathematics and Mathematical Physics, 2021, 61, 1911-1930.	0.8	1
38	Lagrange Interpolation and the Newton–Cotes Formulas on a Bakhvalov Mesh in the Presence of a Boundary Layer. Computational Mathematics and Mathematical Physics, 2022, 62, 347-358.	0.8	1
39	Finite-difference method for calculating a two-dimensional laminar flame. Combustion, Explosion and Shock Waves, 1987, 22, 423-425.	0.8	0
40	A difference scheme for a non-linear singularly perturbed second-order equation. USSR Computational Mathematics and Mathematical Physics, 1990, 30, 107-111.	0.0	0
41	Title is missing!. Siberian Mathematical Journal, 2001, 42, 884-892.	0.6	0
42	Modification of the Euler quadrature formula for functions with a boundary-layer component. Computational Mathematics and Mathematical Physics, 2014, 54, 1489-1498.	0.8	0
43	Analogue of Cubic Spline for Functions with Large Gradients in a Boundary Layer. Lecture Notes in Computer Science, 2019, , 654-662.	1.3	0
44	Optimization of nodes of Newton-Cotes formulas in the presence of an exponential boundary layer. Journal of Physics: Conference Series, 2020, 1546, 012107.	0.4	0
45	Generalized Spline Interpolation of Functions with Large Gradients in Boundary Layers. Computational Mathematics and Mathematical Physics, 2020, 60, 411-426.	0.8	0
46	New approaches to constructing quadrature formulas for functions with large gradients. Journal of Physics: Conference Series, 2021, 1901, 012055.	0.4	0
47	Two-Dimensional Interpolation of Functions with Large Gradients in Boundary Layers. Lecture Notes in Computer Science, 2017, , 760-768.	1.3	0
48	Analysis of approaches to spline interpolation of functions with large gradients in the boundary layer. Journal of Physics: Conference Series, 2022, 2182, 012016.	0.4	0
