#	ARTICLE	IF	CITATIONS
1	Assessment of the Finite-Volume Sea Ice-Ocean Model (FESOM2.0) – Part 2: Partial bottom cells, embedded sea ice and vertical mixing library CVMix. Geoscientific Model Development, 2022, 15, 335-363.	3.6	11
2	Delayed Antarctic sea-ice decline in high-resolution climate change simulations. Nature Communications, 2022, 13, 637.	12.8	31
3	The July 2019 European Heat Wave in a Warmer Climate: Storyline Scenarios with a Coupled Model Using Spectral Nudging. Journal of Climate, 2022, 35, 2373-2390.	3.2	14
4	Robust but weak winter atmospheric circulation response to future Arctic sea ice loss. Nature Communications, 2022, 13, 727.	12.8	67
5	The Arctic Ocean in CMIP6 Models: Biases and Projected Changes in Temperature and Salinity. Earth's Future, 2022, 10, .	6.3	28
6	How to get your message across: designing an impactful knowledge transfer plan in a European project. Geoscience Communication, 2022, 5, 87-100.	0.9	0
7	Response of Northern Hemisphere weather and climate to Arctic sea ice decline: Resolution independence in Polar Amplification Model Intercomparison Project (PAMIP) simulations. Journal of Climate, 2021, , 1-39.	3.2	2
8	AMOC Variability and Watermass Transformations in the AWI Climate Model. Journal of Advances in Modeling Earth Systems, 2021, 13, e2021MS002582.	3.8	6
9	The potential of numerical prediction systems to support the design of Arctic observing systems: Insights from the <scp>APPLICATE</scp> and <scp>YOPP</scp> projects. Quarterly Journal of the Royal Meteorological Society, 2021, 147, 3863-3877.	2.7	6
10	Atmospheric Wind Biases: A Challenge for Simulating the Arctic Ocean in Coupled Models?. Journal of Geophysical Research: Oceans, 2021, 126, e2021JC017565.	2.6	7
11	Arctic Amplification of Precipitation Changes – The Energy Hypothesis. Geophysical Research Letters, 2021, 48, e2021GL094977.	4.0	10
12	Divergent consensus on Arctic amplification influence on midlatitude severe winter weather. Nature Climate Change, 2020, 10, 20-29.	18.8	424
13	Simulations for CMIP6 With the AWI Climate Model AWI – CM – 1. Journal of Advances in Modeling Earth Systems, 2020, 12, e2019MS002009.	3.8	72
14	Preface to the Special Issue on Antarctic Meteorology and Climate: Past, Present and Future. Advances in Atmospheric Sciences, 2020, 37, 421-422.	4.3	1
15	Eddy Kinetic Energy in the Arctic Ocean From a Global Simulation With a 1-km Arctic. Geophysical Research Letters, 2020, 47, e2020GL088550.	4.0	27
16	Intensification of the Atlantic Water Supply to the Arctic Ocean Through Fram Strait Induced by Arctic Sea Ice Decline. Geophysical Research Letters, 2020, 47, e2019GL086682.	4.0	63
17	Quantifying two-way influences between the Arctic and mid-latitudes through regionally increased CO2 concentrations in coupled climate simulations. Climate Dynamics, 2020, 54, 3307-3321.	3.8	7
18	The Year of Polar Prediction in the Southern Hemisphere (YOPP-SH). Bulletin of the American Meteorological Society, 2020, 101, E1653-E1676.	3.3	24

#	ARTICLE	IF	CITATIONS
19	Sensitivity of deep ocean biases to horizontal resolution in prototype CMIP6 simulations with AWI-CM1.0. Geoscientific Model Development, 2019, 12, 2635-2656.	3.6	27
20	Evaluation of FESOM2.0 Coupled to ECHAM6.3: Preindustrial and HighResMIP Simulations. Journal of Advances in Modeling Earth Systems, 2019, 11, 3794-3815.	3.8	38
21	Predictability of Antarctic Sea Ice Edge on Subseasonal Time Scales. Geophysical Research Letters, 2019, 46, 9719-9727.	4.0	24
22	Scalability and some optimization of the Finite-volume Sea ice-Ocean Model, Version 2.0 (FESOM2). Geoscientific Model Development, 2019, 12, 3991-4012.	3.6	32
23	Ocean Heat Transport Into the Barents Sea: Distinct Controls on the Upward Trend and Interannual Variability. Geophysical Research Letters, 2019, 46, 13180-13190.	4.0	23
24	Polar Ocean Observations: A Critical Gap in the Observing System and Its Effect on Environmental Predictions From Hours to a Season. Frontiers in Marine Science, 2019, 6, .	2.5	43
25	The Polar Amplification Model Intercomparison Project (PAMIP) contribution to CMIP6: investigating the causes and consequences of polar amplification. Geoscientific Model Development, 2019, 12, 1139-1164.	3.6	168
26	How Strong Is Influence of the Tropics and Midlatitudes on the Arctic Atmospheric Circulation and Climate Change?. Geophysical Research Letters, 2019, 46, 4942-4952.	4.0	7
27	On the Feedback of Ice-Ocean Stress Coupling from Geostrophic Currents in an Anticyclonic Wind Regime over the Beaufort Gyre. Journal of Physical Oceanography, 2019, 49, 369-383.	1.7	24
28	Fast EVP Solutions in a High-Resolution Sea Ice Model. Journal of Advances in Modeling Earth Systems, 2019, 11, 1269-1284.	3.8	32
29	Assessment of the Finite-volume Sea ice-Ocean Model (FESOM2.0) – Part 1: Description of selected key model elements and comparison to its predecessor version. Geoscientific Model Development, 2019, 12, 4875-4899.	3.6	21
30	Increased Arctic influence on the midlatitude flow during Scandinavian Blocking episodes. Quarterly Journal of the Royal Meteorological Society, 2019, 145, 3846-3862.	2.7	15
31	Recent Sea Ice Decline Did Not Significantly Increase the Total Liquid Freshwater Content of the Arctic Ocean. Journal of Climate, 2019, 32, 15-32.	3.2	40
32	The Role of Sea Ice in Sub-seasonal Predictability. , 2019, , 201-221.		12
33	Using NWP to assess the influence of the Arctic atmosphere on midlatitude weather and climate. Advances in Atmospheric Sciences, 2018, 35, 5-13.	4.3	13
34	Preface to the special issue: Towards improving understanding and prediction of Arctic change and its linkage with Eurasian mid-latitude weather and climate. Advances in Atmospheric Sciences, 2018, 35, 1-4.	4.3	6
35	Towards multi-resolution global climate modeling with ECHAM6-FESOM. Part II: climate variability. Climate Dynamics, 2018, 50, 2369-2394.	3.8	59
36	Influence of a Salt Plume Parameterization in a Coupled Climate Model. Journal of Advances in Modeling Earth Systems, 2018, 10, 2357-2373.	3.8	9

#	ARTICLE	IF	CITATIONS
37	A probabilistic verification score for contours: Methodology and application to Arctic ice edge forecasts. Quarterly Journal of the Royal Meteorological Society, 2018, 144, 735-743.	2.7	26
38	The Benefits of Global High Resolution for Climate Simulation: Process Understanding and the Enabling of Stakeholder Decisions at the Regional Scale. Bulletin of the American Meteorological Society, 2018, 99, 2341-2359.	3.3	107
39	Bright Prospects for Arctic Sea Ice Prediction on Subseasonal Time Scales. Geophysical Research Letters, 2018, 45, 9731-9738.	4.0	60
40	The Influences of the Arctic Troposphere on the Midlatitude Climate Variability and the Recent Eurasian Cooling. Journal of Geophysical Research D: Atmospheres, 2018, 123, 10,162.	3.3	21
41	Arctic Sea Ice Decline Significantly Contributed to the Unprecedented Liquid Freshwater Accumulation in the Beaufort Gyre of the Arctic Ocean. Geophysical Research Letters, 2018, 45, 4956-4964.	4.0	47
42	A 4.5-km resolution Arctic Ocean simulation with the global multi-resolution model FESOM 1.4. Geoscientific Model Development, 2018, 11, 1229-1255.	3.6	47
43	Predictability of Arctic sea ice on weather time scales. Scientific Reports, 2018, 8, 6514.	3.3	29
44	The Relative Influence of Atmospheric and Oceanic Model Resolution on the Circulation of the North Atlantic Ocean in a Coupled Climate Model. Journal of Advances in Modeling Earth Systems, 2018, 10, 2026-2041.	3.8	50
45	ARCTIC CHANGE AND POSSIBLE INFLUENCE ON MID-LATITUDE CLIMATE AND WEATHER: A US CLIVAR White Paper. , 2018, n/a, .		25
46	A simulation of small to giant <sc>Antarctic iceberg evolution: Differential impact on climatology estimates. Journal of Geophysical Research: Oceans, 2017, 122, 3170-3190.	2.6	61
47	Atlantic Water in the Nordic Seas: Locally eddy-permitting ocean simulation in a global setup. Journal of Geophysical Research: Oceans, 2017, 122, 914-940.	2.6	43
48	Eddy-Resolving Simulation of the Atlantic Water Circulation in the Fram Strait With Focus on the Seasonal Cycle. Journal of Geophysical Research: Oceans, 2017, 122, 8385-8405.	2.6	82
49	Vortex splitting on a planetary scale in the stratosphere by cyclogenesis on a subplanetary scale in the troposphere. Quarterly Journal of the Royal Meteorological Society, 2017, 143, 691-705.	2.7	14
50	The Abisko Polar Prediction School. Bulletin of the American Meteorological Society, 2017, 98, 445-447.	3.3	2
51	Remote control of North Atlantic Oscillation predictability via the stratosphere. Quarterly Journal of the Royal Meteorological Society, 2017, 143, 706-719.	2.7	28
52	The Resolution Sensitivity of Northern Hemisphere Blocking in Four 25-km Atmospheric Global Circulation Models. Journal of Climate, 2017, 30, 337-358.	3.2	71
53	Ocean Modeling on a Mesh With Resolution Following the Local Rossby Radius. Journal of Advances in Modeling Earth Systems, 2017, 9, 2601-2614.	3.8	48
54	The Finite-volume Sea Ice-Ocean Model (FESOM2). Geoscientific Model Development, 2017, 10, 765-789.	3.6	87

#	ARTICLE	IF	CITATIONS
55	Brief communication: The challenge and benefit of using sea ice concentration satellite data products with uncertainty estimates in summer sea ice data assimilation. <i>Cryosphere</i> , 2016, 10, 761-774.	3.9	16
56	Remote impact of the Antarctic atmosphere on the southern mid-latitudes. <i>Meteorologische Zeitschrift</i> , 2016, 25, 71-77.	1.0	6
57	Paving the Way for the Year of Polar Prediction. <i>Bulletin of the American Meteorological Society</i> , 2016, 97, ES85-ES88.	3.3	20
58	Advancing Polar Prediction Capabilities on Daily to Seasonal Time Scales. <i>Bulletin of the American Meteorological Society</i> , 2016, 97, 1631-1647.	3.3	199
59	High-Latitude Dynamics of Atmosphere–Ice–Ocean Interactions. <i>Bulletin of the American Meteorological Society</i> , 2016, 97, ES179-ES182.	3.3	7
60	North and equatorial Pacific Ocean circulation in the CORE-II hindcast simulations. <i>Ocean Modelling</i> , 2016, 104, 143-170.	2.4	32
61	Austral winter external and internal atmospheric variability between 1980 and 2014. <i>Geophysical Research Letters</i> , 2016, 43, 2234-2239.	4.0	5
62	Verification of global numerical weather forecasting systems in polar regions using TIGGE data. <i>Quarterly Journal of the Royal Meteorological Society</i> , 2016, 142, 574-582.	2.7	44
63	Editorial for the Quarterly Journal's special issue on Polar Prediction. <i>Quarterly Journal of the Royal Meteorological Society</i> , 2016, 142, 537-538.	2.7	3
64	Predictability of the Arctic sea ice edge. <i>Geophysical Research Letters</i> , 2016, 43, 1642-1650.	4.0	95
65	Sea ice leads in the Arctic Ocean: Model assessment, interannual variability and trends. <i>Geophysical Research Letters</i> , 2016, 43, 7019-7027.	4.0	66
66	An assessment of the Arctic Ocean in a suite of interannual CORE-II simulations. Part III: Hydrography and fluxes. <i>Ocean Modelling</i> , 2016, 100, 141-161.	2.4	81
67	Albedo of coastal landfast sea ice in Prydz Bay, Antarctica: Observations and parameterization. <i>Advances in Atmospheric Sciences</i> , 2016, 33, 535-543.	4.3	21
68	An assessment of the Arctic Ocean in a suite of interannual CORE-II simulations. Part II: Liquid freshwater. <i>Ocean Modelling</i> , 2016, 99, 86-109.	2.4	58
69	Seasonal Atmospheric Responses to Reduced Arctic Sea Ice in an Ensemble of Coupled Model Simulations. <i>Journal of Climate</i> , 2016, 29, 5893-5913.	3.2	39
70	An assessment of the Arctic Ocean in a suite of interannual CORE-II simulations. Part I: Sea ice and solid freshwater. <i>Ocean Modelling</i> , 2016, 99, 110-132.	2.4	64
71	Taking into Account Atmospheric Uncertainty Improves Sequential Assimilation of SMOS Sea Ice Thickness Data in an Ice–Ocean Model. <i>Journal of Atmospheric and Oceanic Technology</i> , 2016, 33, 397-407.	1.3	18
72	North Atlantic simulations in Coordinated Ocean-ice Reference Experiments phase II (CORE-II). Part II: Inter-annual to decadal variability. <i>Ocean Modelling</i> , 2016, 97, 65-90.	2.4	131

#	ARTICLE	IF	CITATIONS
73	Fast atmospheric response to a sudden thinning of Arctic sea ice. <i>Climate Dynamics</i> , 2016, 46, 1015-1025.	3.8	22
74	How increasing CO ₂ leads to an increased negative greenhouse effect in Antarctica. <i>Geophysical Research Letters</i> , 2015, 42, 10,422.	4.0	20
75	Origin of variability in Northern Hemisphere winter blocking on interannual to decadal timescales. <i>Geophysical Research Letters</i> , 2015, 42, 10,037.	4.0	13
76	Polar Lower-Latitude Linkages and Their Role in Weather and Climate Prediction. <i>Bulletin of the American Meteorological Society</i> , 2015, 96, ES197-ES200.	3.3	21
77	The role of atmospheric uncertainty in Arctic summer sea ice data assimilation and prediction. <i>Quarterly Journal of the Royal Meteorological Society</i> , 2015, 141, 2314-2323.	2.7	19
78	Tropical origin of the severe European winter of 1962/1963. <i>Quarterly Journal of the Royal Meteorological Society</i> , 2015, 141, 153-165.	2.7	20
79	Finite-Element Sea Ice Model (FESIM), version 2. <i>Geoscientific Model Development</i> , 2015, 8, 1747-1761.	3.6	102
80	Towards multi-resolution global climate modeling with ECHAM6–FESOM. Part I: model formulation and mean climate. <i>Climate Dynamics</i> , 2015, 44, 757-780.	3.8	132
81	Regional Structure of the Indian Summer Monsoon in Observations, Reanalysis, and Simulation. <i>Journal of Climate</i> , 2015, 28, 1824-1841.	3.2	16
82	An assessment of Southern Ocean water masses and sea ice during 1988–2007 in a suite of interannual CORE-II simulations. <i>Ocean Modelling</i> , 2015, 94, 67-94.	2.4	68
83	An assessment of Antarctic Circumpolar Current and Southern Ocean meridional overturning circulation during 1958–2007 in a suite of interannual CORE-II simulations. <i>Ocean Modelling</i> , 2015, 93, 84-120.	2.4	107
84	The oceanic response to mesoscale atmospheric forcing. <i>Geophysical Research Letters</i> , 2014, 41, 1255-1260.	4.0	30
85	The Finite Element Sea Ice-Ocean Model (FESOM) v.1.4: formulation of an ocean general circulation model. <i>Geoscientific Model Development</i> , 2014, 7, 663-693.	3.6	205
86	Arctic influence on subseasonal midlatitude prediction. <i>Geophysical Research Letters</i> , 2014, 41, 3676-3680.	4.0	83
87	North Atlantic simulations in Coordinated Ocean-ice Reference Experiments phase II (CORE-II). Part I: Mean states. <i>Ocean Modelling</i> , 2014, 73, 76-107.	2.4	320
88	Future Changes in the Western North Pacific Tropical Cyclone Activity Projected by a Multidecadal Simulation with a 16-km Global Atmospheric GCM. <i>Journal of Climate</i> , 2014, 27, 7622-7646.	3.2	49
89	Influence of stochastic sea ice parametrization on climate and the role of atmosphere–sea ice–ocean interaction. <i>Philosophical Transactions Series A, Mathematical, Physical, and Engineering Sciences</i> , 2014, 372, 20130283.	3.4	19
90	Potential sea ice predictability and the role of stochastic sea ice strength perturbations. <i>Geophysical Research Letters</i> , 2014, 41, 8396-8403.	4.0	20
