#	ARTICLE	IF	CITATIONS
1	De-risking in Tier I CNS safety assessments is the primary function of study design and technical training of laboratory staff observers. <i>Regulatory Toxicology and Pharmacology</i> , 2022, 129, 105116.	1.3	1
2	Distortion Product Otoacoustic Emission Test is Not the Test to Use in Nonclinical Safety Assessment. <i>International Journal of Toxicology</i> , 2022, , 109158182210818.	0.6	0
3	REL-1017 (esmethadone; d-methadone) does not cause reinforcing effect, physical dependence and withdrawal signs in Sprague Dawley rats. <i>Scientific Reports</i> , 2022, 12, .	1.6	8
4	The Functional Observation Battery: Utility in Safety Assessment of New Molecular Entities. <i>Neuromethods</i> , 2021, , 165-198.	0.2	2
5	Any behavioral change may have physiological significance: Benign neglect in tier I neurotoxicity testing. <i>Current Opinion in Toxicology</i> , 2021, 28, 20-31.	2.6	1
6	CNS Safety Screening Under ICH S7A Guidelines Requires Observations of Multiple Behavioral Units to Assess Motor Function. <i>International Journal of Toxicology</i> , 2019, 38, 339-356.	0.6	8
7	Predicting the Need for a Tier II Ototoxicity Study From Early Renal Function Data. <i>International Journal of Toxicology</i> , 2019, 38, 265-278.	0.6	1
8	Ototoxicity: The Radical Drum Beat and Rhythm of Cochlear Hair Cell Life and Death. <i>International Journal of Toxicology</i> , 2018, 37, 195-206.	0.6	7
9	Repeated "Day 1" FOB testing in ICH S7A safety assessment protocols: The influence of within- and between-session learning. <i>Journal of Pharmacological and Toxicological Methods</i> , 2017, 85, 61-72.	0.3	7
10	The standardized functional observational battery: Its intrinsic value remains in the instrument of measure: The rat. <i>Journal of Pharmacological and Toxicological Methods</i> , 2016, 82, 90-108.	0.3	30
11	The failure to detect drug-induced sensory loss in standard preclinical studies. <i>Journal of Pharmacological and Toxicological Methods</i> , 2015, 74, 53-74.	0.3	20
