| #  | Article                                                                                                                                                                                                | IF  | CITATIONS |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 1  | Poverty from Space: Using High Resolution Satellite Imagery for Estimating Economic Well-being.<br>World Bank Economic Review, 2022, 36, 382-412.                                                      | 2.4 | 20        |
| 2  | Open data for algorithms: mapping poverty in Belize using open satellite derived features and machine learning. Information Technology for Development, 2021, 27, 263-292.                             | 4.8 | 15        |
| 3  | Development of a Multi-City Deprived Area Mapping Ecosystem. , 2021, , .                                                                                                                               |     | Ο         |
| 4  | Evaluating the Ability to Use Contextual Features Derived from Multi-Scale Satellite Imagery to Map Spatial Patterns of Urban Attributes and Population Distributions. Remote Sensing, 2021, 13, 3962. | 4.0 | 4         |
| 5  | Estimating small-area population density in Sri Lanka using surveys and Geo-spatial data. PLoS ONE, 2020, 15, e0237063.                                                                                | 2.5 | 11        |
| 6  | The Role of Earth Observation in an Integrated Deprived Area Mapping "System―for Low-to-Middle<br>Income Countries. Remote Sensing, 2020, 12, 982.                                                     | 4.0 | 40        |
| 7  | Mapping Poverty and Slums Using Multiple Methodologies in Accra, Ghana. , 2019, , .                                                                                                                    |     | 15        |
| 8  | Evaluating the Relationship Between Contextual Features Derived from Very High Spatial Resolution<br>Imagery and Urban Attributes: A Case Study in Sri Lanka. , 2019, , .                              |     | 0         |
| 9  | People and Pixels 20Âyears later: the current data landscape and research trends blending population and environmental data. Population and Environment, 2019, 41, 209-234.                            | 3.0 | 35        |
| 10 | Prairie or planted? Using time-series NDVI to determine grassland characteristics in Montana. Geo<br>Journal, 2018, 83, 819-834.                                                                       | 3.1 | 8         |
| 11 | Land Cover Change in the Lower Yenisei River Using Dense Stacking of Landsat Imagery in Google Earth<br>Engine. Remote Sensing, 2018, 10, 1226.                                                        | 4.0 | 44        |
| 12 | Geographic Variation in the Use of Low-Acuity Pediatric Emergency Medical Services. Pediatric Emergency Care, 2017, 33, 73-79.                                                                         | 0.9 | 15        |
| 13 | Evaluating the relationship between spatial and spectral features derived from high spatial resolution satellite data and urban poverty in Colombo, Sri Lanka. , 2017, , .                             |     | 20        |
| 14 | Circumpolar arctic tundra biomass and productivity dynamics in response to projected climate change and herbivory. Global Change Biology, 2017, 23, 3895-3907.                                         | 9.5 | 30        |
| 15 | Poverty from Space: Using High-Resolution Satellite Imagery for Estimating Economic Well-Being. , 2017, , .                                                                                            |     | 56        |
| 16 | Evaluating the use of multiple imagery-derived spatial features to predict census demographic variables in Accra, Ghana. , 2016, , .                                                                   |     | 3         |
| 17 | Contextural feature evaluation of multi-resolution imagery. , 2016, , .                                                                                                                                |     | 0         |
| 18 | An object-based temporal inversion approach to urban land use change analysis. Remote Sensing<br>Letters, 2016, 7, 503-512.                                                                            | 1.4 | 15        |

**RYAN N ENGSTROM** 

| #  | Article                                                                                                                                                                                                                                 | IF   | CITATIONS |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 19 | Determining the Relationship Between Census Data and Spatial Features Derived From High-Resolution<br>Imagery in Accra, Ghana. IEEE Journal of Selected Topics in Applied Earth Observations and Remote<br>Sensing, 2016, 9, 1970-1977. | 4.9  | 35        |
| 20 | Land cover and land use changes in the oil and gas regions of Northwestern Siberia under changing climatic conditions. Environmental Research Letters, 2015, 10, 124020.                                                                | 5.2  | 25        |
| 21 | Assessing the relationship between spatial features derived from high resolution satellite imagery and census variables in Accra, Ghana. , 2015, , .                                                                                    |      | 1         |
| 22 | Mapping slums using spatial features in Accra, Ghana. , 2015, , .                                                                                                                                                                       |      | 18        |
| 23 | Generation of fine-scale population layers using multi-resolution satellite imagery and geospatial data. Remote Sensing of Environment, 2013, 130, 219-232.                                                                             | 11.0 | 100       |
| 24 | Primary Care Spatial Density and Nonurgent Emergency Department Utilization: A New Methodology for Evaluating Access to Care. Academic Pediatrics, 2013, 13, 278-285.                                                                   | 2.0  | 49        |
| 25 | Defining neighborhood boundaries for urban health research in developing countries: a case study of<br>Accra, Chana. Journal of Maps, 2013, 9, 36-42.                                                                                   | 2.0  | 33        |
| 26 | Defining Neighborhood Boundaries for Urban Health Research: A Case Study of Accra, Ghana.<br>Geospatial Technology and the Role of Location in Science, 2013, , 27-38.                                                                  | 0.5  | 2         |
| 27 | Connecting the Dots Between Health, Poverty and Place in Accra, Ghana. Annals of the American Association of Geographers, 2012, 102, 932-941.                                                                                           | 3.0  | 46        |
| 28 | Do the Most Vulnerable People Live in the Worst Slums? A Spatial Analysis of Accra, Ghana. Annals of GIS, 2012, 17, 221-235.                                                                                                            | 3.1  | 6         |
| 29 | Using remotely sensed data to map variability in health and wealth indicators in Accra, Ghana. , 2011, , .                                                                                                                              |      | 8         |
| 30 | Do the most vulnerable people live in the worst slums? A spatial analysis of Accra, Ghana. Annals of GIS, 2011, 17, 221-235.                                                                                                            | 3.1  | 44        |
| 31 | Parameter Sensitivity of the Arctic Biome–BGC Model for Estimating Evapotranspiration in the Arctic<br>Coastal Plain. Arctic, Antarctic, and Alpine Research, 2011, 43, 380-388.                                                        | 1.1  | 4         |
| 32 | Nonlinear controls on evapotranspiration in arctic coastal wetlands. Biogeosciences, 2011, 8, 3375-3389.                                                                                                                                | 3.3  | 93        |
| 33 | Spatial refinement of census population distribution using remotely sensed estimates of impervious surfaces in Haiti. International Journal of Remote Sensing, 2010, 31, 5635-5655.                                                     | 2.9  | 62        |
| 34 | Spatial Accessibility to Providers and Vaccination Compliance Among Children With Medicaid.<br>Pediatrics, 2009, 124, 1579-1586.                                                                                                        | 2.1  | 30        |
| 35 | The Relationship Between Soil Moisture and NDVI Near Barrow, Alaska. Physical Geography, 2008, 29, 38-53.                                                                                                                               | 1.4  | 33        |
| 36 | ASSESSING THE CARBON BALANCE OF CIRCUMPOLAR ARCTIC TUNDRA USING REMOTE SENSING AND PROCESS MODELING. , 2007, 17, 213-234.                                                                                                               |      | 123       |

| #  | Article                                                                                                                                                                         | IF  | CITATIONS |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 37 | Modeling evapotranspiration in Arctic coastal plain ecosystems using a modified BIOME-BGC model.<br>Journal of Geophysical Research, 2006, 111, n/a-n/a.                        | 3.3 | 33        |
| 38 | Spatial variation in regional CO2 exchange for the Kuparuk River Basin, Alaska over the summer growing season. Global Change Biology, 2003, 9, 930-941.                         | 9.5 | 28        |
| 39 | PRIESTLEY-TAYLOR ALPHA COEFFICIENT: VARIABILITY AND RELATIONSHIP TO NDVI IN ARCTIC TUNDRA LANDSCAPES. Journal of the American Water Resources Association, 2002, 38, 1647-1659. | 2.4 | 12        |
