#	ARTICLE	IF	CITATIONS
1	Plasma cystathionine and risk of acute myocardial infarction among patients with coronary heart disease: Results from two independent cohorts. International Journal of Cardiology, 2018, 266, 24-30.	1.7	15
2	Plasma methionine and risk of acute myocardial infarction: Effect modification by established risk factors. Atherosclerosis, 2018, 272, 175-181.	0.8	13
3	Dietary choline is related to increased risk of acute myocardial infarction in patients with stable angina pectoris. Biochimie, 2020, 173, 68-75.	2.6	11
4	Creatinine, total cysteine and uric acid are associated with serum retinol in patients with cardiovascular disease. European Journal of Nutrition, 2020, 59, 2383-2393.	3.9	10
5	The risk association of plasma total homocysteine with acute myocardial infarction is modified by serum vitamin A. European Journal of Preventive Cardiology, 2018, 25, 1612-1620.	1.8	9
6	Primary cardiovascular risk prediction by LDL-cholesterol in Caucasian middle-aged and older adults: a joint analysis of three cohorts. European Journal of Preventive Cardiology, 2022, 29, e128-e137.	1.8	9
7	Elevated plasma cystathionine is associated with increased risk of mortality among patients with suspected or established coronary heart disease. American Journal of Clinical Nutrition, 2019, 109, 1546-1554.	4.7	8
8	β-blocker use and risk of all-cause mortality in patients with coronary heart disease: effect modification by serum vitamin A. European Journal of Preventive Cardiology, 2022, 28, 1897-1902.	1.8	5
9	Lipid parameters and vitamin A modify cardiovascular risk prediction by plasma neopterin. Heart, 2020, 106, 1073-1079.	2.9	4
10	Trimethyllysine predicts all-cause and cardiovascular mortality in community-dwelling adults and patients with coronary heart disease. European Heart Journal Open, 2021, 1, .	2.3	4
