LEE CDAVES

#	Article	IF	CITATIONS
1	The Physiological Cost and Enjoyment of Wii Fit in Adolescents, Young Adults, and Older Adults. Journal of Physical Activity and Health, 2010, 7, 393-401.	2.0	335
2	Comparison of energy expenditure in adolescents when playing new generation and sedentary computer games: cross sectional study. BMJ: British Medical Journal, 2007, 335, 1282-1284.	2.3	241
3	The contribution of upper limb and total body movement to adolescents' energy expenditure whilst playing Nintendo Wii. European Journal of Applied Physiology, 2008, 104, 617-623.	2.5	201
4	Evaluation of sit-stand workstations in an office setting: a randomised controlled trial. BMC Public Health, 2015, 15, 1145.	2.9	119
5	Relationships between measures of fitness, physical activity, body composition and vascular function in children. Atherosclerosis, 2009, 204, 244-249.	0.8	78
6	The Effect of Active Video Gaming on Children's Physical Activity, Behavior Preferences and Body Composition. Pediatric Exercise Science, 2010, 22, 535-546.	1.0	74
7	Physical activity, cardiorespiratory fitness, and clustered cardiometabolic risk in 10―to 12â€yearâ€old school children: The REACH Y6 study. American Journal of Human Biology, 2014, 26, 446-451.	1.6	49
8	Validity and reliability of subjective methods to assess sedentary behaviour in adults: a systematic review and meta-analysis. International Journal of Behavioral Nutrition and Physical Activity, 2020, 17, 75.	4.6	49
9	Validity and reliability of a modified english version of the physical activity questionnaire for adolescents. Archives of Public Health, 2016, 74, 3.	2.4	32
10	Making a move in exercise referral: co-development of a physical activity referral scheme. Journal of Public Health, 2018, 40, e586-e593.	1.8	30
11	Physical activity guidelines and cardiovascular risk in children: a cross sectional analysis to determine whether 60Âminutes is enough. BMC Public Health, 2015, 16, 67.	2.9	28
12	Scaling of Peak Oxygen Uptake in Children. Medicine and Science in Sports and Exercise, 2013, 45, 2341-2345.	0.4	27
13	Children's perceptions of factors that influence PE enjoyment: a qualitative investigation. Physical Education and Sport Pedagogy, 2019, 24, 207-219.	3.0	24
14	Examining Influences on Boy's and Girls' Physical Activity Patterns: The A-CLASS Project. Pediatric Exercise Science, 2010, 22, 638-650.	1.0	23
15	Heritability of Arterial Function, Fitness, and Physical Activity in Youth: A Study of Monozygotic and Dizygotic Twins. Journal of Pediatrics, 2010, 157, 943-948.	1.8	23
16	A formative study exploring perceptions of physical activity and physical activity monitoring among children and young people with cystic fibrosis and health care professionals. BMC Pediatrics, 2018, 18, 335.	1.7	18
17	Using an e-Health Intervention to Reduce Prolonged Sitting in UK Office Workers: A Randomised Acceptability and Feasibility Study. International Journal of Environmental Research and Public Health, 2020, 17, 8942.	2.6	17
18	Lack of relationship between sedentary behaviour and vascular function in children. European Journal of Applied Physiology, 2012, 112, 617-622.	2.5	15

LEE GRAVES

#	Article	IF	CITATIONS
19	A multi-component intervention to sit less and move more in a contact centre setting: a feasibility study. BMC Public Health, 2019, 19, 292.	2.9	15
20	Multi-Stakeholder Perspectives of Factors That Influence Contact Centre Call Agents' Workplace Physical Activity and Sedentary Behaviour. International Journal of Environmental Research and Public Health, 2018, 15, 1484.	2.6	14
21	Cardiorespiratory fitness predicts clustered cardiometabolic risk in 10–11.9-year-olds. European Journal of Pediatrics, 2013, 172, 913-918.	2.7	13
22	Preliminary effects and acceptability of a co-produced physical activity referral intervention. Health Education Journal, 2019, 78, 869-884.	1.2	12
23	A protocol to encourage accelerometer wear in children and young people. Qualitative Research in Sport, Exercise and Health, 2016, 8, 319-331.	5.9	11
24	Carotid Artery Function Is Restored in Subjects With Elevated Cardiovascular Disease Risk After a 12-Week Physical Activity Intervention. Canadian Journal of Cardiology, 2019, 35, 23-26.	1.7	10
25	Impact of exercise training on endothelial function and body composition in young people: a study of mono- and di-zygotic twins. European Journal of Applied Physiology, 2012, 112, 421-427.	2.5	9
26	From Surveillance to Intervention: Overview and Baseline Findings for the Active City of Liverpool Active Schools and SportsLinx (A-CLASS) Project. International Journal of Environmental Research and Public Health, 2018, 15, 582.	2.6	7
27	Educator perspectives on factors influencing children's school-based physical activity. Health Promotion International, 2019, 34, 931-940.	1.8	7
28	Temporal dynamics of sitting behavior at work. Proceedings of the National Academy of Sciences of the United States of America, 2020, 117, 14883-14889.	7.1	7
29	Individual calibration of accelerometers in children and their health-related implications. Journal of Sports Sciences, 2018, 36, 1340-1345.	2.0	6
30	Utility of three anthropometric indices in assessing the cardiometabolic risk profile in children. American Journal of Human Biology, 2017, 29, e22934.	1.6	5
31	Sit Less and Move More—A Multicomponent Intervention With and Without Height-Adjustable Workstations in Contact Center Call Agents. Journal of Occupational and Environmental Medicine, 2021, 63, 44-56.	1.7	5
32	Assessment of biochemical liver markers, physical activity, fitness and body mass index for a cardiometabolic risk model in childhood. Acta Paediatrica, International Journal of Paediatrics, 2014, 103, e194-e198.	1.5	1
