#	ARTICLE	IF	CITATIONS
1	Inhibition of the Acetyltransferases p300 and CBP Reveals a Targetable Function for p300 in the Survival and Invasion Pathways of Prostate Cancer Cell Lines. <i>Molecular Cancer Therapeutics</i> , 2011, 10, 1644-1655.	4.1	188
2	Adipose Tissue-derived Mesenchymal Stem Cells Expressing Prodrug-converting Enzyme Inhibit Human Prostate Tumor Growth. <i>Molecular Therapy</i> , 2010, 18, 223-231.	8.2	177
3	The Microbiome of the Prostate Tumor Microenvironment. <i>European Urology</i> , 2017, 72, 625-631.	1.9	154
4	Interleukin-6 stimulation of growth of prostate cancer in vitro and in vivo through activation of the androgen receptor. <i>Endocrine-Related Cancer</i> , 2009, 16, 155-169.	3.1	141
5	The 5 α -reductase in the central nervous system: expression and modes of control. <i>Journal of Steroid Biochemistry and Molecular Biology</i> , 1998, 65, 295-299.	2.5	118
6	Progesterone derivatives are able to influence peripheral myelin protein 22 and PO gene expression: Possible mechanisms of action. <i>Journal of Neuroscience Research</i> , 1999, 56, 349-357.	2.9	117
7	Age-induced decrease of glycoprotein Po and myelin basic protein gene expression in the rat sciatic nerve. Repair by steroid derivatives. <i>Neuroscience</i> , 1998, 85, 569-578.	2.3	104
8	Neuroactive steroids and peripheral myelin proteins. <i>Brain Research Reviews</i> , 2001, 37, 360-371.	9.0	104
9	Interleukin-6 trans-signalling differentially regulates proliferation, migration, adhesion and maspin expression in human prostate cancer cells. <i>Endocrine-Related Cancer</i> , 2010, 17, 241-253.	3.1	102
10	Po gene expression is modulated by androgens in the sciatic nerve of adult male rats. <i>Molecular Brain Research</i> , 1999, 70, 36-44.	2.3	71
11	Neuroactive steroids influence peripheral myelination: a promising opportunity for preventing or treating age-dependent dysfunctions of peripheral nerves. <i>Progress in Neurobiology</i> , 2003, 71, 57-66.	5.7	70
12	Suppressor of Cytokine Signaling-3 Antagonizes cAMP Effects on Proliferation and Apoptosis and Is Expressed in Human Prostate Cancer. <i>American Journal of Pathology</i> , 2006, 169, 2199-2208.	3.8	57
13	Transforming growth factor-beta and astrocytic conditioned medium influence luteinizing hormone-releasing hormone gene expression in the hypothalamic cell line GT1.. <i>Endocrinology</i> , 1996, 137, 5605-5609.	2.8	54
14	Suppressor of cytokine signalling-3 is up-regulated by androgen in prostate cancer cell lines and inhibits androgen-mediated proliferation and secretion. <i>Endocrine-Related Cancer</i> , 2007, 14, 1007-1019.	3.1	45
15	Regulation of growth of prostate cancer cells selected in the presence of interleukin-6 by the anti-interleukin-6 antibody CNTO 328. <i>Prostate</i> , 2006, 66, 1744-1752.	2.3	38
16	Primary, secondary and compensated hypogonadism: a novel risk stratification for infertile men. <i>Andrology</i> , 2017, 5, 505-510.	3.5	38
17	Effects of steroid hormones on gene expression of glial markers in the central and peripheral nervous system: variations induced by aging. <i>Experimental Gerontology</i> , 1998, 33, 827-836.	2.8	36
18	Effects of neuroactive steroids on myelin of peripheral nervous system. <i>Journal of Steroid Biochemistry and Molecular Biology</i> , 2003, 85, 323-327.	2.5	31

#	ARTICLE	IF	CITATIONS
19	Astrocyte-Neuron Interactions in Vitro: Role of Growth Factors and Steroids on LHRH Dynamics. Brain Research Bulletin, 1997, 44, 465-469.	3.0	24
20	Interactions between growth factors and steroids in the control of LHRH-secreting neurons. Brain Research Reviews, 2001, 37, 223-234.	9.0	24
21	Crosstalk Between Normal and Tumoral Brain Cells: Effect on Sex Steroid Metabolism. Endocrine, 1998, 8, 65-72.	2.2	21
22	Identification of μ -crystallin as an androgen-regulated gene in human prostate cancer. Prostate, 2009, 69, 1109-1118.	2.3	19
23	Corticosteroids Regulate the Gene Expression of FGF-1 and FGF-2 in Cultured Rat Astrocytes. Journal of Molecular Neuroscience, 2000, 15, 11-18.	2.3	18
24	Interactions between type 1 astrocytes and LHRH-secreting neurons (GT1-1 cells): modification of steroid metabolism and possible role of TGF β 1. Journal of Steroid Biochemistry and Molecular Biology, 1999, 71, 41-47.	2.5	15
25	Soluble gp130 Regulates Prostate Cancer Invasion and Progression in an Interleukin-6 Dependent and Independent Manner. Journal of Urology, 2011, 186, 2107-2114.	0.4	15
26	Testosterone metabolites in patients reduce the levels of very long chain fatty acids accumulated in X-adrenoleukodystrophic fibroblasts. Neuroscience Letters, 2000, 289, 139-142.	2.1	8
27	Increased resistance to trail-induced apoptosis in prostate cancer cells selected in the presence of bicalutamide. Prostate, 2007, 67, 1194-1201.	2.3	8
28	Human Prostate Tissue-derived Extracellular Matrix as a Model of Prostate Microenvironment. European Urology Focus, 2016, 2, 400-408.	3.1	8
29	A mechanistic insight into the anti-metastatic role of the prostate specific antigen. Translational Oncology, 2021, 14, 101211.	3.7	7
30	Endoplasmic reticulum oxidoreductase 1 alpha modulates prostate cancer hallmarks. Translational Andrology and Urology, 2021, 10, 1110-1120.	1.4	5
31	Progesterone derivatives are able to influence peripheral myelin protein 22 and PO gene expression: Possible mechanisms of action. Journal of Neuroscience Research, 1999, 56, 349-357.	2.9	5
32	Analysis of the Enteric Microbiome: First Tentative Steps Towards a Comprehensive Work-up of Prostate Cancer?. European Urology, 2018, 74, 583-584.	1.9	4
33	Development of the First Model of Radical Prostatectomy in the Mouse: A Feasibility Study. European Urology, 2018, 73, 482-484.	1.9	3
34	Progesterone derivatives are able to influence peripheral myelin protein 22 and PO gene expression: Possible mechanisms of action. , 1999, 56, 349.		1
