#	ARTICLE	IF	CITATIONS
1	Soil biota response to experimental rainfall reduction depends on the dominant tree species in mature northern Mediterranean forests. <i>Soil Biology and Biochemistry</i> , 2021, 154, 108122.	8.8	13
2	Holm oak fecundity does not acclimate to a drier world. <i>New Phytologist</i> , 2021, 231, 631-645.	7.3	12
3	Rainfall exclusion and thinning can alter the relationships between forest functioning and drought. <i>New Phytologist</i> , 2019, 223, 1267-1279.	7.3	48
4	Thinning increases tree growth by delaying drought-induced growth cessation in a Mediterranean evergreen oak coppice. <i>Forest Ecology and Management</i> , 2018, 409, 333-342.	3.2	67
5	Few multiyear precipitationâ€reduction experiments find aâ€shift in the productivityâ€precipitation relationship. <i>Global Change Biology</i> , 2016, 22, 2570-2581.	9.5	105
6	Disentangling the Litter Quality and Soil Microbial Contribution to Leaf and Fine Root Litter Decomposition Responses to Reduced Rainfall. <i>Ecosystems</i> , 2016, 19, 490-503.	3.4	47
7	Morphological and phenological shoot plasticity in a Mediterranean evergreen oak facing long-term increased drought. <i>Oecologia</i> , 2012, 169, 565-577.	2.0	79
8	Is selective thinning an adequate practice for adapting <i>Quercus ilex</i> coppices to climate change?. <i>Annals of Forest Science</i> , 2011, 68, 575.	2.0	66
9	Modelling rainfall interception in a mediterranean <i>Quercus ilex</i> ecosystem: Lesson from a throughfall exclusion experiment. <i>Journal of Hydrology</i> , 2008, 357, 57-66.	5.4	114
10	On the separation of net ecosystem exchange into assimilation and ecosystem respiration: review and improved algorithm. <i>Global Change Biology</i> , 2005, 11, 1424-1439.	9.5	2,778
