

Saobo Lei

List of Publications by Citations

Source: <https://exaly.com/author-pdf/4254446/saobo-lei-publications-by-citations.pdf>

Version: 2024-04-27

This document has been generated based on the publications and citations recorded by exaly.com. For the latest version of this publication list, visit the link given above.

The third column is the impact factor (IF) of the journal, and the fourth column is the number of citations of the article.

#	Paper	IF	Citations
20	TRPM2 Promotes Neurotoxin MPP/MPTP-Induced Cell Death. <i>Molecular Neurobiology</i> , 2018 , 55, 409-420	6.2	54
19	Adrenergic facilitation of GABAergic transmission in rat entorhinal cortex. <i>Journal of Neurophysiology</i> , 2007 , 98, 2868-77	3.2	51
18	Inhibition of L-Type Ca Channels by TRPC1-STIM1 Complex Is Essential for the Protection of Dopaminergic Neurons. <i>Journal of Neuroscience</i> , 2017 , 37, 3364-3377	6.6	50
17	Activation of neurotensin receptor 1 facilitates neuronal excitability and spatial learning and memory in the entorhinal cortex: beneficial actions in an Alzheimer's disease model. <i>Journal of Neuroscience</i> , 2014 , 34, 7027-42	6.6	35
16	Dopaminergic modulation of GABAergic transmission in the entorhinal cortex: concerted roles of α 1 adrenoreceptors, inward rectifier K ⁺ , and T-type Ca ²⁺ channels. <i>Cerebral Cortex</i> , 2014 , 24, 3195-208	5.1	25
15	Cross interaction of dopaminergic and adrenergic systems in neural modulation. <i>International Journal of Physiology, Pathophysiology and Pharmacology</i> , 2014 , 6, 137-42	3.4	20
14	Requirement of phospholipase C and protein kinase C in cholecystokinin-mediated facilitation of NMDA channel function and anxiety-like behavior. <i>Hippocampus</i> , 2012 , 22, 1438-50	3.5	16
13	Serotonergic modulation of Neural activities in the entorhinal cortex. <i>International Journal of Physiology, Pathophysiology and Pharmacology</i> , 2012 , 4, 201-10	3.4	13
12	Neurotensinergic augmentation of glutamate release at the perforant path-granule cell synapse in rat dentate gyrus: Roles of L-Type Ca ²⁺ channels, calmodulin and myosin light-chain kinase. <i>Neuropharmacology</i> , 2015 , 95, 252-60	5.5	12
11	Somatostatin depresses the excitability of subicular bursting cells: Roles of inward rectifier K channels, KCNQ channels and Epac. <i>Hippocampus</i> , 2017 , 27, 971-984	3.5	11
10	Depression of neuronal excitability and epileptic activities by group II metabotropic glutamate receptors in the medial entorhinal cortex. <i>Hippocampus</i> , 2015 , 25, 1299-313	3.5	9
9	Roles of K and cation channels in ORL-1 receptor-mediated depression of neuronal excitability and epileptic activities in the medial entorhinal cortex. <i>Neuropharmacology</i> , 2019 , 151, 144-158	5.5	8
8	Neurotensinergic Excitation of Dentate Gyrus Granule Cells via G β -Coupled Inhibition of TASK-3 Channels. <i>Cerebral Cortex</i> , 2016 , 26, 977-90	5.1	8
7	Histamine facilitates GABAergic transmission in the rat entorhinal cortex: Roles of H ₁ and H ₂ receptors, Na ⁺ -permeable cation channels, and inward rectifier K channels. <i>Hippocampus</i> , 2017 , 27, 613-631	3.5	7
6	Oxytocin receptors excite lateral nucleus of central amygdala by phospholipase C β and protein kinase C-dependent depression of inwardly rectifying K channels. <i>Journal of Physiology</i> , 2020 , 598, 3501-3520	3.9	7
5	A protocol for preparation and transfection of rat entorhinal cortex organotypic cultures for electrophysiological whole-cell recordings. <i>MethodsX</i> , 2017 , 4, 360-371	1.9	1
4	Involvement of TRPC5 channels, inwardly rectifying K channels, PLC β and PIP in vasopressin-mediated excitation of medial central amygdala neurons. <i>Journal of Physiology</i> , 2021 , 599, 3101-3119	3.9	1

3	Activation of Oxytocin Receptors Excites Subicular Neurons by Multiple Signaling and Ionic Mechanisms. <i>Cerebral Cortex</i> , 2021 , 31, 2402-2415	5.1	1
2	Ionic and signaling mechanisms involved in neurotensin-mediated excitation of central amygdala neurons. <i>Neuropharmacology</i> , 2021 , 196, 108714	5.5	0
1	Activation of V vasopressin receptors excite subicular pyramidal neurons by activating TRPV1 and depressing GIRK channels. <i>Neuropharmacology</i> , 2021 , 190, 108565	5.5
