citing authors

#	ARTICLE	IF	CITATIONS
1	Local climate impacts from ongoing restoration of a peatland. <i>Hydrological Processes</i> , 2022, 36, .	1.1	5
2	The global transformation of geomorphology. <i>Geological Society Memoir</i> , 2022, 58, 1-17.	0.9	6
3	A 50-year record of nitrate concentrations in the Slapton Ley Catchment, Devon, United Kingdom. <i>Hydrological Processes</i> , 2021, 35, .	1.1	2
4	BOD as a Measure of Fluvial Organic Matter Labilityâ€”The Decoupling of O <sub>2</sub> Consumption From CO <sub>2</sub> Production. <i>Journal of Geophysical Research G: Biogeosciences</i> , 2021, 126, .	1.3	1
5	Monitoring soil erosion on agricultural land: results and implications for the Rother valley, West Sussex, UK. <i>Earth Surface Processes and Landforms</i> , 2020, 45, 3931-3942.	1.2	10
6	The dissolved organic carbon flux from the UK â€” A new Bayesian approach to flux calculation. <i>Journal of Hydrology</i> , 2020, 590, 125511.	2.3	3
7	Are peatlands cool humid islands in a landscape?. <i>Hydrological Processes</i> , 2020, 34, 5013-5025.	1.1	4
8	The Place of Field Studies in Environmental Science. , 2020, , 47-65.		0
9	A spatial total nitrogen budget for Great Britain. <i>Science of the Total Environment</i> , 2020, 728, 138864.	3.9	5
10	The History of Fieldwork in the Geosciences. , 2020, , 66-86.		0
11	The Impact of Peatland Restoration on Local Climate: Restoration of a Cool Humid Island. <i>Journal of Geophysical Research G: Biogeosciences</i> , 2019, 124, 1696-1713.	1.3	14
12	The importance of sewage effluent discharge in the export of dissolved organic carbon from U.K. rivers. <i>Hydrological Processes</i> , 2019, 33, 1851-1864.	1.1	14
13	A Molecular Budget for a Peatland Based Upon <sup>13</sup> C Solidâ€”State Nuclear Magnetic Resonance. <i>Journal of Geophysical Research G: Biogeosciences</i> , 2018, 123, 547-560.	1.3	11
14	Declines in the dissolved organic carbon (DOC) concentration and flux from the UK. <i>Journal of Hydrology</i> , 2018, 556, 775-789.	2.3	26
15	Changing patterns of daily precipitation totals at the Coweeta Hydrologic Laboratory, North Carolina, <sc>USA</sc>. <i>International Journal of Climatology</i> , 2018, 38, 94-104.	1.5	30
16	The fate of suspended sediment and particulate organic carbon in transit through the channels of a river catchment. <i>Hydrological Processes</i> , 2018, 32, 146-159.	1.1	11
17	The seven sources of variance in fluvial flux time series. <i>Hydrological Processes</i> , 2018, 32, 3996-3997.	1.1	3
18	Thermodynamic Control of the Carbon Budget of a Peatland. <i>Journal of Geophysical Research G: Biogeosciences</i> , 2018, 123, 1863-1878.	1.3	14

#	ARTICLE	IF	CITATIONS
19	Human impact on long-term organic carbon export to rivers. <i>Journal of Geophysical Research G: Biogeosciences</i> , 2017, 122, 947-965.	1.3	37
20	The flux of organic matter through a peatland ecosystem: The role of cellulose, lignin, and their control of the ecosystem oxidation state. <i>Journal of Geophysical Research G: Biogeosciences</i> , 2017, 122, 1655-1671.	1.3	19
21	More rain, less soil: long-term changes in rainfall intensity with climate change. <i>Earth Surface Processes and Landforms</i> , 2016, 41, 563-566.	1.2	72
22	Long-term accumulation and transport of anthropogenic phosphorus in three river basins. <i>Nature Geoscience</i> , 2016, 9, 353-356.	5.4	282
23	The total phosphorus budget of a peat-covered catchment. <i>Journal of Geophysical Research G: Biogeosciences</i> , 2016, 121, 1814-1828.	1.3	16
24	The UK's total nitrogen budget from 1990 to 2020: a transition from source to sink?. <i>Biogeochemistry</i> , 2016, 129, 325-340.	1.7	9
25	The effective oxidation state of a peatland. <i>Journal of Geophysical Research G: Biogeosciences</i> , 2016, 121, 145-158.	1.3	18
26	The fluvial flux of total reactive and total phosphorus from the UK in the context of a national phosphorus budget: comparing UK river fluxes with phosphorus trade imports and exports. <i>Biogeochemistry</i> , 2016, 130, 31-51.	1.7	17
27	The fluvial flux of particulate organic matter from the UK: the emission factor of soil erosion. <i>Earth Surface Processes and Landforms</i> , 2016, 41, 61-71.	1.2	22
28	Shifts in discharge-concentration relationships as a small catchment recover from severe drought. <i>Hydrological Processes</i> , 2015, 29, 498-507.	1.1	34
29	An analysis of rainfall across the British Isles in the 1870s. <i>International Journal of Climatology</i> , 2015, 35, 2934-2947.	1.5	11
30	Whither field hydrology? The need for discovery science and outrageous hydrological hypotheses. <i>Water Resources Research</i> , 2015, 51, 5919-5928.	1.7	127
31	Seeing the climate through the trees: observing climate and forestry impacts on streamflow using a 60-year record. <i>Hydrological Processes</i> , 2015, 29, 473-480.	1.1	24
32	Time series analysis of the world's longest fluvial nitrate record: evidence for changing states of catchment saturation. <i>Hydrological Processes</i> , 2015, 29, 434-444.	1.1	14
33	Whither field hydrology? The need for discovery science and outrageous hydrological hypotheses. , 2015, 51, 5919.		1
34	Rainfall Distributions in Sri Lanka in Time and Space: An Analysis Based on Daily Rainfall Data. <i>Climate</i> , 2014, 2, 242-263.	1.2	47
35	Sustainable Phosphorus Management and the Need for a Long-Term Perspective: The Legacy Hypothesis. <i>Environmental Science &amp; Technology</i> , 2014, 48, 8417-8419.	4.6	161
36	North Atlantic Oscillation amplifies orographic precipitation and river flow in upland Britain. <i>Water Resources Research</i> , 2013, 49, 3504-3515.	1.7	62

#	ARTICLE	IF	CITATIONS
37	Farming for Water Quality: Balancing Food Security and Nitrate Pollution in UK River Basins. <i>Annals of the American Association of Geographers</i> , 2013, 103, 397-407.	3.0	33
38	Anticipating and Managing Future Trade-offs and Complementarities between Ecosystem Services. <i>Ecology and Society</i> , 2013, 18, .	1.0	70
39	The flux of dissolved nitrogen from the UK â€” Evaluating the role of soils and land use. <i>Science of the Total Environment</i> , 2012, 434, 90-100.	3.9	24
40	Forest land cover continues to exacerbate freshwater acidification despite decline in sulphate emissions. <i>Environmental Pollution</i> , 2012, 167, 58-69.	3.7	22
41	The multi-annual nitrogen budget of a peat-covered catchment â€” Changing from sink to source?. <i>Science of the Total Environment</i> , 2012, 433, 178-188.	3.9	23
42	The flux of DOC from the UK â€” Predicting the role of soils, land use and net watershed losses. <i>Journal of Hydrology</i> , 2012, 448-449, 149-160.	2.3	63
43	Changing patterns of heavy rainfall in upland areas: a case study from northern England. <i>International Journal of Climatology</i> , 2012, 32, 518-532.	1.5	49
44	Monitoring fluvial water chemistry for trend detection: hydrological variability masks trends in datasets covering fewer than 12 years. <i>Journal of Environmental Monitoring</i> , 2011, 13, 514.	2.1	27
45	Nitrate in United Kingdom Rivers: Policy and Its Outcomes Since 1970. <i>Environmental Science &amp; Technology</i> , 2011, 45, 175-181.	4.6	60
46	A homogenous daily rainfall record for the Radcliffe Observatory, Oxford, from the 1820s. <i>Water Resources Research</i> , 2011, 47, .	1.7	16
47	Nitrate pollution in intensively farmed regions: What are the prospects for sustaining highâ€quality groundwater?. <i>Water Resources Research</i> , 2011, 47, .	1.7	84
48	On the value of longâ€term, lowâ€frequency water quality sampling: avoiding throwing the baby out with the bathwater. <i>Hydrological Processes</i> , 2011, 25, 828-830.	1.1	44
49	Nitrate concentrations and fluxes in the River Thames over 140 years (1868â€2008): are increases irreversible?. <i>Hydrological Processes</i> , 2010, 24, 2657-2662.	1.1	132
50	What do we still need to know about the ecohydrology of riparian zones?. <i>Ecohydrology</i> , 2010, 3, 373-377.	1.1	36
51	Placing heavy rainfall events in context using long time series: An example from the North York Moors. <i>Weather</i> , 2010, 65, 88-94.	0.6	4
52	The complete carbon budget of a drained peat catchment. <i>Soil Use and Management</i> , 2010, 26, 261-273.	2.6	29
53	Has the composition of fluvial DOC changed? Spatiotemporal patterns in the DOCâ€color relationship. <i>Global Biogeochemical Cycles</i> , 2010, 24, .	1.9	13
54	Long-term monitoring of river water nitrate: how much data do we need?. <i>Journal of Environmental Monitoring</i> , 2010, 12, 71-79.	2.1	57

#	ARTICLE	IF	CITATIONS
55	The multi-annual carbon budget of a peat-covered catchment. <i>Science of the Total Environment</i> , 2009, 407, 4084-4094.	3.9	88
56	Stream nitrate levels in a small catchment in south west England over a period of 35 years (1970â€“2005). <i>Hydrological Processes</i> , 2009, 23, 2056-2068.	1.1	20
57	Statistical analysis of nitrate concentrations from the Rivers Frome and Piddle (Dorset, UK) for the period 1965â€“2007. <i>Ecohydrology</i> , 2009, 2, 55-65.	1.1	41
58	Fluvial flux of nitrogen from Great Britain 1974â€“2005 in the context of the terrestrial nitrogen budget of Great Britain. <i>Global Biogeochemical Cycles</i> , 2009, 23, .	1.9	41
59	Homogenising the rainfall record at Durham for the 1870s. <i>Hydrological Sciences Journal</i> , 2009, 54, 199-209.	1.2	5
60	Temporal and spatial analysis of nitrate concentrations from the Frome and Piddle catchments in Dorset (UK) for water years 1978 to 2007: Evidence for nitrate breakthrough?. <i>Science of the Total Environment</i> , 2008, 407, 507-526.	3.9	40
61	Linking pulses of atmospheric deposition to DOC release in an upland peatâ€“covered catchment. <i>Global Biogeochemical Cycles</i> , 2008, 22, .	1.9	9
62	Importance of long-term monitoring for detecting environmental change: lessons from a lowland river in south east England. <i>Biogeosciences</i> , 2008, 5, 1529-1535.	1.3	58
63	Intercomparison of Evapotranspiration Over the Savannah Volta Basin in West Africa Using Remote Sensing Data. <i>Sensors</i> , 2008, 8, 2736-2761.	2.1	25
64	If you have a hammer everything looks like a nail: traditional versus participatory model building. <i>Interdisciplinary Science Reviews</i> , 2007, 32, 263-282.	1.0	121
65	Flux of dissolved organic carbon from U.K. rivers. <i>Global Biogeochemical Cycles</i> , 2007, 21, .	1.9	84
66	Nonâ€“stationarity in long time series: some curious reversals in the â€“memoryâ€“™ effect. <i>Hydrological Processes</i> , 2007, 21, 3529-3531.	1.1	15
67	Inter-decadal variability in daily rainfall at Durham (UK) since the 1850s. <i>International Journal of Climatology</i> , 2007, 27, 945-956.	1.5	24
68	Durham University Observatory and its meteorological record. <i>Weather</i> , 2007, 62, 265-269.	0.6	3
69	Patterns of denitrification rates in European alluvial soils under various hydrological regimes. <i>Freshwater Biology</i> , 2007, 52, 252-266.	1.2	126
70	Do nitrogen inputs stimulate dissolved organic carbon production in upland peat bogs?. <i>Global Biogeochemical Cycles</i> , 2006, 20, n/a-n/a.	1.9	16
71	Floodplains in River Ecosystems. <i>Water Quality Measurements Series</i> , 2006, , 1-15.	0.1	2
72	Long-term changes in hydrological pathways in an upland peat catchmentâ€“recovery from severe drought?. <i>Journal of Hydrology</i> , 2006, 321, 5-20.	2.3	41

#	ARTICLE	IF	CITATIONS
73	Trends in Drought Frequency – the Fate of DOC Export From British Peatlands. <i>Climatic Change</i> , 2006, 76, 339-359.	1.7	61
74	A third paradox in catchment hydrology and biogeochemistry: decoupling in the riparian zone. <i>Hydrological Processes</i> , 2005, 19, 2087-2089.	1.1	47
75	Fluxes of dissolved carbon dioxide and inorganic carbon from an upland peat catchment: implications for soil respiration. <i>Biogeochemistry</i> , 2005, 73, 515-539.	1.7	58
76	Linking hydrology and biogeochemistry in complex landscapes. <i>Progress in Physical Geography</i> , 2005, 29, 297-316.	1.4	194
77	Predicting the future DOC flux from upland peat catchments. <i>Journal of Hydrology</i> , 2005, 300, 126-139.	2.3	82
78	Can climate change explain increases in DOC flux from upland peat catchments?. <i>Science of the Total Environment</i> , 2004, 326, 95-112.	3.9	158
79	Time series analysis of long-term river dissolved organic carbon records. <i>Hydrological Processes</i> , 2004, 18, 893-911.	1.1	109
80	Toward a conceptual model of floodplain water table response. <i>Water Resources Research</i> , 2004, 40, .	1.7	79
81	Long term records of riverine dissolved organic matter. <i>Biogeochemistry</i> , 2003, 64, 165-178.	1.7	164
82	Short-term nitrogen transformation rates in riparian wetland soil determined with nitrogen-15. <i>Biology and Fertility of Soils</i> , 2003, 38, 129-136.	2.3	32
83	Nitrogen Removal by Riparian Buffers along a European Climatic Gradient: Patterns and Factors of Variation. <i>Ecosystems</i> , 2003, 6, 0020-0030.	1.6	214
84	Monitoring change in hydrological systems. <i>Science of the Total Environment</i> , 2003, 310, 9-16.	3.9	29
85	Carbon budget for a British upland peat catchment. <i>Science of the Total Environment</i> , 2003, 312, 133-146.	3.9	155
86	Hydraulic conductivity in upland blanket peat: measurement and variability. <i>Hydrological Processes</i> , 2003, 17, 1227-1237.	1.1	118
87	Hydrological flowpaths and nitrate removal rates within a riparian floodplain along a fourth-order stream in Brittany (France). <i>Hydrological Processes</i> , 2003, 17, 1177-1195.	1.1	89
88	Hydrological studies on blanket peat: the significance of the acrotelm-catotelm model. <i>Journal of Ecology</i> , 2003, 91, 86-102.	1.9	161
89	Runoff production in blanket peat covered catchments. <i>Water Resources Research</i> , 2003, 39, .	1.7	150
90	Changes in stream nitrate concentrations due to land management practices, ecological succession, and climate: Developing a systems approach to integrated catchment response. <i>Water Resources Research</i> , 2003, 39, .	1.7	54

#	ARTICLE	IF	CITATIONS
91	Identification and Characterization of Pedogeomorphological Processes on a Hillslope. Soil Science Society of America Journal, 2002, 66, 1897-1910.	1.2	45
92	Infiltration, runoff and sediment production in blanket peat catchments: implications of field rainfall simulation experiments. Hydrological Processes, 2002, 16, 2537-2557.	1.1	95
93	Investigating contemporary and historical sediment inputs to Slapton Higher Ley: an analysis of the robustness of source ascription methods when applied to lake sediment data. Hydrological Processes, 2002, 16, 3467-3486.	1.1	11
94	Release of dissolved organic carbon from upland peat. Hydrological Processes, 2002, 16, 3487-3504.	1.1	118
95	Application of ground-penetrating radar to the identification of subsurface piping in blanket peat. Earth Surface Processes and Landforms, 2002, 27, 235-249.	1.2	98
96	Laboratory experiments on drought and runoff in blanket peat. European Journal of Soil Science, 2002, 53, 675-690.	1.8	58
97	Macroporosity and infiltration in blanket peat: the implications of tension disc infiltrometer measurements. Hydrological Processes, 2001, 15, 289-303.	1.1	83
98	Spatial distribution of chemical weathering intensity on an acid hillslope. Zeitschrift für Geomorphologie, 2000, 44, 379-402.	0.3	4
99	Carbon Monoxide and Nitrogen Oxides Pollution in Moscow. Water, Air, and Soil Pollution, 1999, 112, 107-131.	1.1	15
100	The distribution of solute processes on an acid hillslope and the delivery of solutes to a stream: I. Exchangeable bases. Earth Surface Processes and Landforms, 1999, 24, 781-797.	1.2	10
101	The distribution of solute processes on an acid hillslope and the delivery of solutes to a stream: II. Exchangeable Al <sup>3+</sup> . Earth Surface Processes and Landforms, 1999, 24, 851-865.	1.2	5
102	Denitrification in riparian buffer zones: the role of floodplain hydrology. Hydrological Processes, 1999, 13, 1451-1463.	1.1	178
103	Denitrification in riparian buffer zones: the role of floodplain hydrology. , 1999, 13, 1451.		129
104	Modelling the spatial variability in floodplain soil contamination during flood events to improve chemical mass balance estimates. , 1998, 12, 1233-1255.		21
105	Synoptic Climatology of Air Pollution in Moscow. Theoretical and Applied Climatology, 1998, 61, 85-102.	1.3	49
106	Long-term rainfall and streamflow records for north central England: putting the Environmental Change Network site at Moor House, Upper Teesdale, in context. Hydrological Sciences Journal, 1998, 43, 775-787.	1.2	58
107	Modelling the spatial variability in floodplain soil contamination during flood events to improve chemical mass balance estimates. , 1998, 12, 1233.		1
108	POTASSIUM CHEMISTRY OF A SMALL UPLAND STREAM FOLLOWING A MAJOR DROUGHT. Hydrological Processes, 1997, 11, 189-201.	1.1	13

#	ARTICLE	IF	CITATIONS
109	Some aspects of the three-dimensional heat island in Moscow. <i>International Journal of Climatology</i> , 1997, 17, 1451-1465.	1.5	28
110	Rill erosion along the thalweg of a hillslope hollow: A case study from the Cotswold hills, Central England. <i>Earth Surface Processes and Landforms</i> , 1994, 19, 377-385.	1.2	14
111	Role of floodplain sediments in reducing the nitrate concentration of subsurface run-off: A case study in the Cotswolds, UK. <i>Hydrological Processes</i> , 1993, 7, 287-295.	1.1	110
112	Flow frequency responses to hardwood-to-grass conversion and subsequent succession. <i>Hydrological Processes</i> , 1992, 6, 179-188.	1.1	46
