#	ARTICLE	IF	CITATIONS
1	Skeletal remodeling in health and disease. <i>Nature Medicine</i> , 2007, 13, 791-801.	30.7	893
2	FSH Directly Regulates Bone Mass. <i>Cell</i> , 2006, 125, 247-260.	28.9	612
3	TSH Is a Negative Regulator of Skeletal Remodeling. <i>Cell</i> , 2003, 115, 151-162.	28.9	585
4	The myokine irisin increases cortical bone mass. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2015, 112, 12157-12162.	7.1	372
5	Genotype-phenotype correlation in 1,507 families with congenital adrenal hyperplasia owing to 21-hydroxylase deficiency. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2013, 110, 2611-2616.	7.1	317
6	Noninvasive Prenatal Diagnosis of Congenital Adrenal Hyperplasia Using Cell-Free Fetal DNA in Maternal Plasma. <i>Journal of Clinical Endocrinology and Metabolism</i> , 2014, 99, E1022-E1030.	3.6	270
7	Blocking FSH induces thermogenic adipose tissue and reduces body fat. <i>Nature</i> , 2017, 546, 107-112.	27.8	250
8	Oxytocin is an anabolic bone hormone. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2009, 106, 7149-7154.	7.1	223
9	Calcium-activated intracellular calcium elevation: A novel mechanism of osteoclast regulation. <i>Biochemical and Biophysical Research Communications</i> , 1989, 163, 1461-1465.	2.1	217
10	Loss of MMP-2 disrupts skeletal and craniofacial development and results in decreased bone mineralization, joint erosion and defects in osteoblast and osteoclast growth. <i>Human Molecular Genetics</i> , 2007, 16, 1113-1123.	2.9	202
11	Molecular regulation of mechanotransduction. <i>Biochemical and Biophysical Research Communications</i> , 2005, 328, 751-755.	2.1	198
12	Glucocerebrosidase gene-deficient mouse recapitulates Gaucher disease displaying cellular and molecular dysregulation beyond the macrophage. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2010, 107, 19473-19478.	7.1	198
13	Impaired osteoblastic differentiation, reduced bone formation, and severe osteoporosis in noggin-overexpressing mice. <i>Journal of Clinical Investigation</i> , 2003, 112, 924-934.	8.2	192
14	Follicle-stimulating hormone stimulates TNF production from immune cells to enhance osteoblast and osteoclast formation. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2006, 103, 14925-14930.	7.1	191
15	Stimulation of osteoclastic bone resorption by hydrogen peroxide. <i>Biochemical and Biophysical Research Communications</i> , 1992, 183, 1153-1158.	2.1	190
16	Mitochondria to nucleus stress signaling. <i>Journal of Cell Biology</i> , 2003, 161, 507-519.	5.2	169
17	Calcitonin gene-related peptide inhibits osteoclastic bone resorption: A comparative study. <i>Calcified Tissue International</i> , 1987, 40, 149-154.	3.1	162
18	A new function for CD38/ADP-ribosyl cyclase in nuclear Ca <sup>2+</sup> homeostasis. <i>Nature Cell Biology</i> , 1999, 1, 409-414.	10.3	159

#	ARTICLE	IF	CITATIONS
19	BMP-12 Treatment of Adult Mesenchymal Stem Cells In Vitro Augments Tendon-Like Tissue Formation and Defect Repair In Vivo. PLoS ONE, 2011, 6, e17531.	2.5	154
20	Osteoclastogenesis, Bone Resorption, and Osteoclast-Based Therapeutics. Journal of Bone and Mineral Research, 2003, 18, 599-609.	2.8	151
21	Osteoclast signalling pathways. Biochemical and Biophysical Research Communications, 2005, 328, 728-738.	2.1	145
22	Calcineurin regulates bone formation by the osteoblast. Proceedings of the National Academy of Sciences of the United States of America, 2005, 102, 17130-17135.	7.1	144
23	Mechanisms balancing skeletal matrix synthesis and degradation. Biochemical Journal, 2002, 364, 329-341.	3.7	141
24	ACTH protects against glucocorticoid-induced osteonecrosis of bone. Proceedings of the National Academy of Sciences of the United States of America, 2010, 107, 8782-8787.	7.1	134
25	Forty years of calcitonin—where are we now? A tribute to the work of Iain Macintyre, FRS. Bone, 2002, 30, 655-663.	2.9	132
26	Translational musculoskeletal science: Is sarcopenia the next clinical target after osteoporosis?. Annals of the New York Academy of Sciences, 2011, 1237, 95-105.	3.8	131
27	FSH blockade improves cognition in mice with Alzheimer's disease. Nature, 2022, 603, 470-476.	27.8	131
28	Blocking antibody to the $\beta$ -subunit of FSH prevents bone loss by inhibiting bone resorption and stimulating bone synthesis. Proceedings of the National Academy of Sciences of the United States of America, 2012, 109, 14574-14579.	7.1	129
29	In vivo and in vitro effects of amylin and amylin-amide on calcium metabolism in the rat and rabbit. Biochemical and Biophysical Research Communications, 1989, 162, 876-881.	2.1	121
30	Regulation of bone remodeling by vasopressin explains the bone loss in hyponatremia. Proceedings of the National Academy of Sciences of the United States of America, 2013, 110, 18644-18649.	7.1	120
31	Intermittent recombinant TSH injections prevent ovariectomy-induced bone loss. Proceedings of the National Academy of Sciences of the United States of America, 2008, 105, 4289-4294.	7.1	118
32	TNF $\alpha$ mediates the skeletal effects of thyroid-stimulating hormone. Proceedings of the National Academy of Sciences of the United States of America, 2006, 103, 12849-12854.	7.1	114
33	FSH-receptor isoforms and FSH-dependent gene transcription in human monocytes and osteoclasts. Biochemical and Biophysical Research Communications, 2010, 394, 12-17.	2.1	109
34	Structure-phenotype correlations of human CYP21A2 mutations in congenital adrenal hyperplasia. Proceedings of the National Academy of Sciences of the United States of America, 2013, 110, 2605-2610.	7.1	107
35	Clinical, genetic, and structural basis of congenital adrenal hyperplasia due to 11 $\beta$ -hydroxylase deficiency. Proceedings of the National Academy of Sciences of the United States of America, 2017, 114, E1933-E1940.	7.1	106
36	Role of mitochondrial reactive oxygen species in osteoclast differentiation. Annals of the New York Academy of Sciences, 2010, 1192, 245-252.	3.8	101

#	ARTICLE	IF	CITATIONS
37	Smoke carcinogens cause bone loss through the aryl hydrocarbon receptor and induction of Cyp1 enzymes. Proceedings of the National Academy of Sciences of the United States of America, 2013, 110, 11115-11120.	7.1	101
38	Efficacy and tolerability of intravenous ibandronate injections in postmenopausal osteoporosis: 2-year results from the DIVA study. Journal of Rheumatology, 2008, 35, 488-97.	2.0	99
39	EFFECTS OF PEPTIDES FROM THE CALCITONIN GENES ON BONE AND BONE CELLS. Quarterly Journal of Experimental Physiology (Cambridge, England), 1988, 73, 471-485.	1.0	98
40	Divalent cations mimic the inhibitory effect of extracellular ionised calcium on bone resorption by isolated rat osteoclasts: Further evidence for a $\text{Ca}^{2+}$ receptor?. Journal of Cellular Physiology, 1991, 149, 422-427.	4.1	95
41	Disorders Associated With Acute Rapid and Severe Bone Loss. Journal of Bone and Mineral Research, 2003, 18, 2083-2094.	2.8	94
42	Induction of a program gene expression during osteoblast differentiation with strontium ranelate. Biochemical and Biophysical Research Communications, 2007, 355, 307-311.	2.1	94
43	Inhibition of osteoclastic acid phosphatase abolishes bone resorption. Biochemical and Biophysical Research Communications, 1989, 159, 68-71.	2.1	92
44	Emerging Insights into the Role of Calcium Ions in Osteoclast Regulation. Journal of Bone and Mineral Research, 1999, 14, 669-674.	2.8	92
45	The Calcitonin Gene Peptides: Biology and Clinical Relevance. Critical Reviews in Clinical Laboratory Sciences, 1990, 28, 109-174.	6.1	86
46	Mode of Action of Interleukin-6 on Mature Osteoclasts. Novel Interactions with Extracellular $\text{Ca}^{2+}$ Sensing in the Regulation of Osteoclastic Bone Resorption. Journal of Cell Biology, 1998, 142, 1347-1356.	5.2	85
47	Glucocerebrosidase 2 gene deletion rescues type 1 Gaucher disease. Proceedings of the National Academy of Sciences of the United States of America, 2014, 111, 4934-4939.	7.1	85
48	Hyperthyroid-associated osteoporosis is exacerbated by the loss of TSH signaling. Journal of Clinical Investigation, 2012, 122, 3737-3741.	8.2	83
49	The Thyroid-Stimulating Hormone Receptor: Impact of Thyroid-Stimulating Hormone and Thyroid-Stimulating Hormone Receptor Antibodies on Multimerization, Cleavage, and Signaling. Endocrinology and Metabolism Clinics of North America, 2009, 38, 319-341.	3.2	79
50	Adenosine $\text{A}_{1\text{R}}$ receptors regulate bone resorption in mice: Adenosine $\text{A}_{1\text{R}}$ receptor blockade or deletion increases bone density and prevents ovariectomy-induced bone loss in adenosine $\text{A}_{1\text{R}}$ receptor "knockout" mice. Arthritis and Rheumatism, 2010, 62, 534-541.	6.7	79
51	Mechanisms of action of adrenocorticotrophic hormone and other melanocortins relevant to the clinical management of patients with multiple sclerosis. Multiple Sclerosis Journal, 2013, 19, 130-136.	3.0	78
52	The effect of extracellular calcium elevation on morphology and function of isolated rat osteoclasts. Bioscience Reports, 1989, 9, 747-751.	2.4	77
53	Cd38/Adp-Ribosyl Cyclase. Journal of Cell Biology, 1999, 146, 1161-1172.	5.2	76
54	Physiological loading of joints prevents cartilage degradation through CITED2. FASEB Journal, 2011, 25, 182-191.	0.5	74

#	ARTICLE	IF	CITATIONS
55	ACTH is a novel regulator of bone mass. <i>Annals of the New York Academy of Sciences</i> , 2010, 1192, 110-116.	3.8	73
56	Disordered osteoclast formation and function in a CD38 (ADP-ribosyl cyclase)-deficient mouse establishes an essential role for CD38 in bone resorption. <i>FASEB Journal</i> , 2003, 17, 369-375.	0.5	72
57	Gaucher disease gene <i>GBA</i> functions in immune regulation. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2012, 109, 10018-10023.	7.1	70
58	Bone Marrow Oxytocin Mediates the Anabolic Action of Estrogen on the Skeleton. <i>Journal of Biological Chemistry</i> , 2012, 287, 29159-29167.	3.4	66
59	Cathepsin K, Osteoclastic Resorption, and Osteoporosis Therapy. <i>Journal of Bone and Mineral Research</i> , 2001, 16, 1747-1749.	2.8	65
60	A novel mechanism for coupling cellular intermediary metabolism to cytosolic Ca <sup>2+</sup> signaling via CD38/ADP-ribosyl cyclase, a putative intracellular NAD <sup>+</sup> sensor. <i>FASEB Journal</i> , 2002, 16, 302-314.	0.5	65
61	Epitope-specific monoclonal antibodies to FSH <sup>12</sup> increase bone mass. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2018, 115, 2192-2197.	7.1	65
62	Calcitonin and bone formation: a knockout full of surprises. <i>Journal of Clinical Investigation</i> , 2002, 110, 1769-1771.	8.2	64
63	Osteoblast regulation via ligand-activated nuclear trafficking of the oxytocin receptor. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2014, 111, 16502-16507.	7.1	63
64	The Influence of Thyroid-Stimulating Hormone and Thyroid-Stimulating Hormone Receptor Antibodies on Osteoclastogenesis. <i>Thyroid</i> , 2011, 21, 897-906.	4.5	62
65	Thyroid-stimulating hormone induces a Wnt-dependent, feed-forward loop for osteoblastogenesis in embryonic stem cell cultures. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2011, 108, 16277-16282.	7.1	60
66	Osteoclastic differentiation and function regulated by old and new pathways. <i>Reviews in Endocrine and Metabolic Disorders</i> , 2007, 7, 23-32.	5.7	59
67	Regulation of Skeletal Homeostasis. <i>Endocrine Reviews</i> , 2018, 39, 701-718.	20.1	59
68	TNF regulates cellular NAD <sup>+</sup> metabolism in primary macrophages. <i>Biochemical and Biophysical Research Communications</i> , 2006, 342, 1312-1318.	2.1	58
69	Calcium and bone disease. <i>BioFactors</i> , 2011, 37, 159-167.	5.4	58
70	CELLULAR BIOLOGY OF BONE RESORPTION. <i>Biological Reviews</i> , 1993, 68, 197-264.	10.4	57
71	TSH and Bone Loss. <i>Annals of the New York Academy of Sciences</i> , 2006, 1068, 309-318.	3.8	57
72	Bone, Inflammation, and Inflammatory Bowel Disease. <i>Current Osteoporosis Reports</i> , 2011, 9, 251-257.	3.6	57

#	ARTICLE	IF	CITATIONS
73	Bisphosphonates inactivate human EGFRs to exert antitumor actions. Proceedings of the National Academy of Sciences of the United States of America, 2014, 111, 17989-17994.	7.1	57
74	Modularity of osteoclast behaviour and "mode-specific" inhibition of osteoclast function. Bioscience Reports, 1990, 10, 547-556.	2.4	54
75	Male Osteoporosis: Epidemiology and the Pathogenesis of Aging Bones. Current Osteoporosis Reports, 2011, 9, 229-236.	3.6	54
76	Blocking FSH action attenuates osteoclastogenesis. Biochemical and Biophysical Research Communications, 2012, 422, 54-58.	2.1	54
77	Functions of vasopressin and oxytocin in bone mass regulation. Proceedings of the National Academy of Sciences of the United States of America, 2016, 113, 164-169.	7.1	54
78	Mechanism of glucocerebrosidase activation and dysfunction in Gaucher disease unraveled by molecular dynamics and deep learning. Proceedings of the National Academy of Sciences of the United States of America, 2019, 116, 5086-5095.	7.1	54
79	The Central Nervous System (CNS)-independent Anti-bone-resorptive Activity of Muscle Contraction and the Underlying Molecular and Cellular Signatures. Journal of Biological Chemistry, 2013, 288, 13511-13521.	3.4	53
80	Minireview: The Link Between Fat and Bone: Does Mass Beget Mass?. Endocrinology, 2012, 153, 2070-2075.	2.8	52
81	Repurposing of bisphosphonates for the prevention and therapy of nonsmall cell lung and breast cancer. Proceedings of the National Academy of Sciences of the United States of America, 2014, 111, 17995-18000.	7.1	52
82	"Calcium receptors" on eukaryotic cells with special reference to the osteoclast. Bioscience Reports, 1990, 10, 493-507.	2.4	51
83	Evidence that calcineurin is required for the genesis of bone-resorbing osteoclasts. American Journal of Physiology - Renal Physiology, 2007, 292, F285-F291.	2.7	51
84	Activation of the Ca <sup>2+</sup> "receptor" on the osteoclast by Ni <sup>2+</sup> elicits cytosolic Ca <sup>2+</sup> signals: Evidence for receptor activation and inactivation, intracellular Ca <sup>2+</sup> redistribution, and divalent cation modulation. Journal of Cellular Physiology, 1993, 155, 120-129.	4.1	50
85	Molecular and Functional Evidence for Calcineurin-A <sup>1</sup> and A <sup>2</sup> Isoforms in the Osteoclast: Novel Insights into Cyclosporin A Action on Bone Resorption. Biochemical and Biophysical Research Communications, 1999, 254, 248-252.	2.1	50
86	NO-dependent osteoclast motility: reliance on cGMP-dependent protein kinase I and VASP. Journal of Cell Science, 2005, 118, 5479-5487.	2.0	50
87	Bone loss or lost bone: Rationale and recommendations for the diagnosis and treatment of early postmenopausal bone loss. Current Osteoporosis Reports, 2009, 7, 118-126.	3.6	49
88	Clinical, genetic, and structural basis of apparent mineralocorticoid excess due to 11 <sup>β</sup> -hydroxysteroid dehydrogenase type 2 deficiency. Proceedings of the National Academy of Sciences of the United States of America, 2017, 114, E11248-E11256.	7.1	48
89	Selective antagonism of calcitonin-induced osteoclastic quiescence (Q effect) by human calcitonin gene-related peptide-(Val8Phe37). Biochemical and Biophysical Research Communications, 1991, 179, 134-139.	2.1	47
90	Regulated production of the pituitary hormone oxytocin from murine and human osteoblasts. Biochemical and Biophysical Research Communications, 2011, 411, 512-515.	2.1	47

#	ARTICLE	IF	CITATIONS
91	New Insights into the Regulation of Cathepsin K Gene Expression by Osteoprotegerin Ligand. Biochemical and Biophysical Research Communications, 2001, 285, 335-339.	2.1	46
92	Anabolic actions of Notch on mature bone. Proceedings of the National Academy of Sciences of the United States of America, 2016, 113, E2152-61.	7.1	46
93	Further evidence for direct pro-resorptive actions of FSH. Biochemical and Biophysical Research Communications, 2010, 394, 6-11.	2.1	45
94	Actions of pituitary hormones beyond traditional targets. Journal of Endocrinology, 2018, 237, R83-R98.	2.6	45
95	FSH Beyond Fertility. Frontiers in Endocrinology, 2019, 10, 136.	3.5	45
96	Calcium sensing and cell signaling processes in the local regulation of osteoclastic bone resorption. Biological Reviews, 2004, 79, 79-100.	10.4	44
97	Anabolic steroids reduce spinal cord injury-related bone loss in rats associated with increased Wnt signaling. Journal of Spinal Cord Medicine, 2013, 36, 616-622.	1.4	43
98	The osteoclast Ca <sup>2+</sup> receptor is highly sensitive to activation by transition metal cations. Biochemical and Biophysical Research Communications, 1992, 187, 913-918.	2.1	41
99	Ca <sup>2+</sup> influx through the osteoclastic plasma membrane ryanodine receptor. American Journal of Physiology - Renal Physiology, 2002, 282, F921-F932.	2.7	41
100	Oxytocin deficiency impairs maternal skeletal remodeling. Biochemical and Biophysical Research Communications, 2009, 388, 161-166.	2.1	41
101	FSH, Bone Mass, Body Fat, and Biological Aging. Endocrinology, 2018, 159, 3503-3514.	2.8	40
