| #  | Article                                                                                                                                                                                                                          | IF   | CITATIONS |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 1  | Heterostructured Ceria–Titania-Supported Platinum Catalysts for the Water Gas Shift Reaction. ACS<br>Applied Materials & Interfaces, 2022, 14, 8575-8586.                                                                        | 8.0  | 18        |
| 2  | Partially sintered copper‒ceria as excellent catalyst for the high-temperature reverse water gas shift reaction. Nature Communications, 2022, 13, 867.                                                                           | 12.8 | 86        |
| 3  | Catalytically efficient Ni-NiOx-Y2O3 interface for medium temperature water-gas shift reaction.<br>Nature Communications, 2022, 13, 2443.                                                                                        | 12.8 | 25        |
| 4  | Small-sized cuprous oxide species on silica boost acrolein formation via selective oxidation of propylene. Chinese Journal of Catalysis, 2021, 42, 310-319.                                                                      | 14.0 | 7         |
| 5  | The Effect of Hydrogenated TiO <sub>2</sub> to the Au/TiO <sub>2</sub> Catalyst in Catalyzing CO<br>Oxidation. Langmuir, 2021, 37, 3270-3280.                                                                                    | 3.5  | 9         |
| 6  | Facile Fabrication of CeO <sub>2</sub> -Al <sub>2</sub> O <sub>3</sub> Hollow Sphere with Atomically Dispersed Fe via Spray Pyrolysis. Inorganic Chemistry, 2021, 60, 5183-5189.                                                 | 4.0  | 4         |
| 7  | Au/La-CeO catalyst for CO oxidation: Effect of different atmospheres pretreatment on gold state ―<br>Commemorating the 100th anniversary of the birth of Academician Guangxian Xu. Journal of Rare<br>Earths, 2021, 39, 364-373. | 4.8  | 5         |
| 8  | Unique structure of active platinum-bismuth site for oxidation of carbon monoxide. Nature Communications, 2021, 12, 3342.                                                                                                        | 12.8 | 32        |
| 9  | <scp>Co<sub><i>a</i></sub>Sm<sub><i>b</i></sub>O<sub><i>x</i></sub></scp> Catalyst with<br>Excellent Catalytic Performance for <scp>NH<sub>3</sub></scp> Decomposition. Chinese Journal of<br>Chemistry, 2021, 39, 2359-2366.    | 4.9  | 6         |
| 10 | CO2 methanation catalyzed by a Fe-Co/Al2O3 catalyst. Journal of Environmental Chemical Engineering,<br>2021, 9, 105594.                                                                                                          | 6.7  | 18        |
| 11 | <i>In Situ</i> Generation of the Surface Oxygen Vacancies in a Copper–Ceria Catalyst for the Water–Gas Shift Reaction. Langmuir, 2021, 37, 10499-10509.                                                                          | 3.5  | 15        |
| 12 | Spatial confinement and electron transfer moderating Mo N bond strength for superior ammonia decomposition catalysis. Applied Catalysis B: Environmental, 2021, 294, 120254.                                                     | 20.2 | 31        |
| 13 | Very high loading oxidized copper supported on ceria to catalyze the water-gas shift reaction. Journal of Catalysis, 2021, 402, 83-93.                                                                                           | 6.2  | 18        |
| 14 | Magnetic Frustration in a Zeolite. Chemistry of Materials, 2021, 33, 9725-9731.                                                                                                                                                  | 6.7  | 1         |
| 15 | Ceria-supported ruthenium clusters transforming from isolated single atoms for hydrogen<br>production via decomposition of ammonia. Applied Catalysis B: Environmental, 2020, 268, 118424.                                       | 20.2 | 83        |
| 16 | Intrinsically Active Surface in a Pt/γ-Mo <sub>2</sub> N Catalyst for the Water–Gas Shift Reaction:<br>Molybdenum Nitride or Molybdenum Oxide?. Journal of the American Chemical Society, 2020, 142,<br>13362-13371.             | 13.7 | 41        |
| 17 | Highly Efficient CuO/α-MnO <sub>2</sub> Catalyst for Low-Temperature CO Oxidation. Langmuir, 2020,<br>36, 11196-11206.                                                                                                           | 3.5  | 33        |
| 18 | N-Coordinated Dual-Metal Single-Site Catalyst for Low-Temperature CO Oxidation. ACS Catalysis, 2020,<br>10, 2754-2761.                                                                                                           | 11.2 | 112       |

| #  | Article                                                                                                                                                                                                                                                              | IF   | CITATIONS |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 19 | Insights into facet-dependent reactivity of CuO–CeO2 nanocubes and nanorods as catalysts for CO<br>oxidation reaction. Chinese Journal of Catalysis, 2020, 41, 1017-1027.                                                                                            | 14.0 | 41        |
| 20 | Effects of Hydrogen and Hydrothermal Pretreatments on a Silica-Supported Copper Catalyst for CO<br>Oxidation: Copper Hydroxy Active Species. Journal of Physical Chemistry C, 2020, 124, 25270-25281.                                                                | 3.1  | 9         |
| 21 | Construction of stabilized bulk-nano interfaces for highly promoted inverse CeO2/Cu catalyst.<br>Nature Communications, 2019, 10, 3470.                                                                                                                              | 12.8 | 59        |
| 22 | The effect of reactants adsorption and products desorption for Au/TiO2 in catalyzing CO oxidation.<br>Journal of Catalysis, 2019, 376, 134-145.                                                                                                                      | 6.2  | 22        |
| 23 | Hydrogen production via catalytic decomposition of NH3 using promoted MgO-supported ruthenium catalysts. Science China Chemistry, 2019, 62, 1625-1633.                                                                                                               | 8.2  | 29        |
| 24 | Construction of Active Site in a Sintered Copper–Ceria Nanorod Catalyst. Journal of the American<br>Chemical Society, 2019, 141, 17548-17557.                                                                                                                        | 13.7 | 94        |
| 25 | Use of fusion transcription factors to reprogram cellulase transcription and enable efficient cellulase production in Trichoderma reesei. Biotechnology for Biofuels, 2019, 12, 244.                                                                                 | 6.2  | 24        |
| 26 | Transition metal nanoparticles supported La-promoted MgO as catalysts for hydrogen production via catalytic decomposition of ammonia. Journal of Energy Chemistry, 2019, 38, 41-49.                                                                                  | 12.9 | 53        |
| 27 | CeO <sub>2</sub> @SiO <sub>2</sub> Core–Shell Nanostructure-Supported CuO as<br>High-Temperature-Tolerant Catalysts for CO Oxidation. Langmuir, 2019, 35, 8658-8666.                                                                                                 | 3.5  | 13        |
| 28 | Component synergy and armor protection induced superior catalytic activity and stability of<br>ultrathin Co-Fe spinel nanosheets confined in mesoporous silica shells for ammonia decomposition<br>reaction. Applied Catalysis B: Environmental, 2019, 253, 121-130. | 20.2 | 32        |
| 29 | Facile Synthesis of Stable MO <sub>2</sub> N Nanobelts with High Catalytic Activity for Ammonia<br>Decomposition. Chinese Journal of Chemistry, 2019, 37, 364-372.                                                                                                   | 4.9  | 14        |
| 30 | Effect of Structural Evolution of Gold Species Supported on Ceria in Catalyzing CO Oxidation.<br>Journal of Physical Chemistry C, 2019, 123, 9001-9012.                                                                                                              | 3.1  | 28        |
| 31 | Direct Identification of Active Surface Species for the Water–Gas Shift Reaction on a Gold–Ceria<br>Catalyst. Journal of the American Chemical Society, 2019, 141, 4613-4623.                                                                                        | 13.7 | 139       |
| 32 | Au/TiO <sub>2</sub> Catalysts for CO Oxidation: Effect of Gold State to Reactivity. Journal of Physical<br>Chemistry C, 2018, 122, 4928-4936.                                                                                                                        | 3.1  | 40        |
| 33 | Promoted Cu-Fe3O4 catalysts for low-temperature water gas shift reaction: Optimization of Cu<br>content. Applied Catalysis B: Environmental, 2018, 226, 182-193.                                                                                                     | 20.2 | 70        |
| 34 | Hydroxyl-rich ceriaÂhydrate nanoparticles enhancing the alcohol electrooxidation performance of Pt<br>catalysts. Journal of Materials Chemistry A, 2018, 6, 2318-2326.                                                                                               | 10.3 | 43        |
| 35 | Effect of Nickel Oxide Doping to Ceria-Supported Gold Catalyst for CO Oxidation and Water-Gas Shift<br>Reactions. Catalysts, 2018, 8, 584.                                                                                                                           | 3.5  | 5         |
| 36 | Pt-Embedded CuO <sub><i>x</i></sub> –CeO <sub>2</sub> Multicore–Shell Composites: Interfacial<br>Redox Reaction-Directed Synthesis and Composition-Dependent Performance for CO Oxidation. ACS<br>Applied Materials & Interfaces, 2018, 10, 34172-34183.             | 8.0  | 29        |

| #  | Article                                                                                                                                                                                                                                           | IF   | CITATIONS |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 37 | Nanoceria Supported Gold Catalysts for CO Oxidation. Chinese Journal of Chemistry, 2018, 36, 639-643.                                                                                                                                             | 4.9  | 11        |
| 38 | Metal-organic-framework derived controllable synthesis of mesoporous copper-cerium oxide composite catalysts for the preferential oxidation of carbon monoxide. Fuel, 2018, 229, 217-226.                                                         | 6.4  | 50        |
| 39 | Thermally stable and highly active Pt/CeO <sub>2</sub> @SiO <sub>2</sub> catalysts with a porous/hollow structure. Catalysis Science and Technology, 2018, 8, 4413-4419.                                                                          | 4.1  | 15        |
| 40 | Promoted porous Co3O4-Al2O3 catalysts for ammonia decomposition. Science China Chemistry, 2018, 61, 1389-1398.                                                                                                                                    | 8.2  | 26        |
| 41 | Crystal Plane Effect of Ceria on Supported Copper Oxide Cluster Catalyst for CO Oxidation:<br>Importance of Metal–Support Interaction. ACS Catalysis, 2017, 7, 1313-1329.                                                                         | 11.2 | 301       |
| 42 | Fe- and Co-doped lanthanum oxides catalysts for ammonia decomposition: Structure and catalytic performances. Journal of Rare Earths, 2017, 35, 15-23.                                                                                             | 4.8  | 25        |
| 43 | Synthesis and metal–support interaction of subnanometer copper–palladium bimetallic oxide clusters<br>for catalytic oxidation of carbon monoxide. Inorganic Chemistry Frontiers, 2017, 4, 668-674.                                                | 6.0  | 18        |
| 44 | Co3O4-Al2O3 mesoporous hollow spheres as efficient catalyst for Fischer-Tropsch synthesis. Applied<br>Catalysis B: Environmental, 2017, 211, 176-187.                                                                                             | 20.2 | 41        |
| 45 | Boosting Cu-Ce interaction in CuxO/CeO2 nanocube catalysts for enhanced catalytic performance of preferential oxidation of CO in H2-rich gases. Molecular Catalysis, 2017, 436, 90-99.                                                            | 2.0  | 42        |
| 46 | Catalytically active ceria-supported cobalt–manganese oxide nanocatalysts for oxidation of carbon<br>monoxide. Physical Chemistry Chemical Physics, 2017, 19, 14533-14542.                                                                        | 2.8  | 23        |
