| #  | Article                                                                                                                                                                                                                         | IF   | CITATIONS |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 1  | Impact of weighted average cost of capital, capital expenditure, and other parameters on future<br>utilityâ€scale PV levelised cost of electricity. Progress in Photovoltaics: Research and Applications,<br>2020, 28, 439-453. | 8.1  | 247       |
| 2  | Wind Effect on PV Module Temperature: Analysis of Different Techniques for an Accurate Estimation.<br>Energy Procedia, 2013, 40, 77-86.                                                                                         | 1.8  | 205       |
| 3  | Classification and challenges of bottom-up energy system models - A review. Renewable and<br>Sustainable Energy Reviews, 2020, 129, 109917.                                                                                     | 16.4 | 167       |
| 4  | Transition pathways optimization methodology through EnergyPLAN software for long-term energy planning. Applied Energy, 2019, 235, 356-368.                                                                                     | 10.1 | 94        |
| 5  | Data-driven upscaling methods for regional photovoltaic power estimation and forecast using satellite and numerical weather prediction data. Solar Energy, 2017, 158, 1026-1038.                                                | 6.1  | 90        |
| 6  | Multi-objective optimization algorithm coupled to EnergyPLAN software: The EPLANopt model. Energy, 2018, 149, 213-221.                                                                                                          | 8.8  | 89        |
| 7  | Multi-Model Ensemble for day ahead prediction of photovoltaic power generation. Solar Energy, 2016, 134, 132-146.                                                                                                               | 6.1  | 86        |
| 8  | Structure and stability of high pressure synthesized Mg–TM hydrides (TM = Ti, Zr, Hf, V, Nb and Ta) as<br>possible new hydrogen rich hydrides for hydrogen storage. Journal of Materials Chemistry, 2009, 19,<br>8150.          | 6.7  | 77        |
| 9  | Review of Statistical and Analytical Degradation Models for Photovoltaic Modules and Systems as<br>Well as Related Improvements. IEEE Journal of Photovoltaics, 2018, 8, 1773-1786.                                             | 2.5  | 77        |
| 10 | True Cost of Solar Hydrogen. Solar Rrl, 2022, 6, 2100487.                                                                                                                                                                       | 5.8  | 62        |
| 11 | BiPV System Performance and Efficiency Drops: Overview on PV Module Temperature Conditions of Different Module Types. Energy Procedia, 2014, 48, 1311-1319.                                                                     | 1.8  | 60        |
| 12 | Hardness determination of bio-ceramics using Laser-Induced Breakdown Spectroscopy. Spectrochimica<br>Acta, Part B: Atomic Spectroscopy, 2011, 66, 290-294.                                                                      | 2.9  | 53        |
| 13 | Novel method for the improvement in the evaluation of outdoor performance loss rate in different PV technologies and comparison with two other methods. Solar Energy, 2015, 117, 139-152.                                       | 6.1  | 48        |
| 14 | A Round Robin Test exercise on hydrogen absorption/desorption properties of a magnesium hydride<br>based material. International Journal of Hydrogen Energy, 2013, 38, 6704-6717.                                               | 7.1  | 41        |
| 15 | Using machine learning in photovoltaics to create smarter and cleaner energy generation systems: A comprehensive review. Journal of Cleaner Production, 2022, 364, 132701.                                                      | 9.3  | 41        |
| 16 | Identification of technical risks in the photovoltaic value chain and quantification of the economic impact. Progress in Photovoltaics: Research and Applications, 2017, 25, 592-604.                                           | 8.1  | 39        |
| 17 | Deterministic and Stochastic Approaches for Day-Ahead Solar Power Forecasting. Journal of Solar<br>Energy Engineering, Transactions of the ASME, 2017, 139, .                                                                   | 1.8  | 38        |
| 18 | New method for the early design of BIPV with electric storage: A case study in northern Italy.<br>Sustainable Cities and Society, 2019, 48, 101400.                                                                             | 10.4 | 38        |

| #  | Article                                                                                                                                                                                                                                                                                                                        | IF   | CITATIONS |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 19 | Multi-objective investment optimization for energy system models in high temporal and spatial resolution. Applied Energy, 2020, 264, 114728.                                                                                                                                                                                   | 10.1 | 38        |
| 20 | Predictive Energy Control Strategy for Peak Shaving and Shifting Using BESS and PV Generation Applied to the Retail Sector. Electronics (Switzerland), 2019, 8, 526.                                                                                                                                                           | 3.1  | 30        |
| 21 | From investment optimization to fair benefit distribution in renewable energy community modelling.<br>Applied Energy, 2022, 310, 118447.                                                                                                                                                                                       | 10.1 | 30        |
| 22 | Progress in regional PV power forecasting: A sensitivity analysis on the Italian case study. Renewable<br>Energy, 2022, 189, 983-996.                                                                                                                                                                                          | 8.9  | 29        |
| 23 | Experimental investigation of a low cost passive strategy to improve the performance of Building<br>Integrated Photovoltaic systems. Solar Energy, 2015, 111, 288-296.                                                                                                                                                         | 6.1  | 28        |
| 24 | Outdoor PV System Monitoring—Input Data Quality, Data Imputation and Filtering Approaches.<br>Energies, 2020, 13, 5099.                                                                                                                                                                                                        | 3.1  | 28        |
| 25 | Photovoltaic lifetime forecast model based on degradation patterns. Progress in Photovoltaics:<br>Research and Applications, 2020, 28, 979-992.                                                                                                                                                                                | 8.1  | 26        |
| 26 | Multi-objective battery sizing optimisation for renewable energy communities with distribution-level constraints: A prosumer-driven perspective. Applied Energy, 2021, 297, 117171.                                                                                                                                            | 10.1 | 26        |
| 27 | Review of photovoltaic module degradation, field inspection techniques and techno-economic assessment. Renewable and Sustainable Energy Reviews, 2022, 165, 112616.                                                                                                                                                            | 16.4 | 26        |
| 28 | Italian protocol for massive solar integration: Imbalance mitigation strategies. Renewable Energy, 2020, 153, 725-739.                                                                                                                                                                                                         | 8.9  | 25        |
| 29 | International collaboration framework for the calculation of performance loss rates: Data quality,<br>benchmarks, and trends (towards a uniform methodology). Progress in Photovoltaics: Research and<br>Applications, 2021, 29, 573-602,<br>Crystal structure, electronic structure, and vibrational properties of < mml:math | 8.1  | 25        |

| 31 | Physical Review B, 2008, 78, .<br>A Small-Scale Prototype for the Optimization of PV Generation and Battery Storage through the Use<br>of a Building Energy Management System. , 2018, , .                                                                                                                                     |      | 23        |
| 32 | Photovoltaic generation forecast for power transmission scheduling: A real case study. Solar<br>Energy, 2018, 174, 976-990.                                                                                                                                                                                                    | 6.1  | 23        |
| 33 | Incorporating combined cycle gas turbine flexibility constraints and additional costs into the EPLANopt model: The Italian case study. Energy, 2018, 160, 33-43.                                                                                                                                                               | 8.8  | 23        |
| 34 | Multi-Objective Optimization Model EPLANopt for Energy Transition Analysis and Comparison with Climate-Change Scenarios. Energies, 2020, 13, 3255.                                                                                                                                                                             | 3.1  | 23        |
| 35 | Italian protocol for massive solar integration: From solar imbalance regulation to firm 24/365 solar generation. Renewable Energy, 2021, 169, 425-436.                                                                                                                                                                         | 8.9  | 23        |
| 36 | Optimisation method to obtain marginal abatement cost-curve through EnergyPLAN software. Smart<br>Energy, 2021, 1, 100002.                                                                                                                                                                                                     | 5.7  | 22        |
