

Molly Przeworski

List of Publications by Year in Descending Order

Source: <https://exaly.com/author-pdf/4966755/molly-przeworski-publications-by-year.pdf>

Version: 2024-04-27

This document has been generated based on the publications and citations recorded by exaly.com. For the latest version of this publication list, visit the link given above.

The third column is the impact factor (IF) of the journal, and the fourth column is the number of citations of the article.

90
papers

9,151
citations

#	Paper	IF	Citations
90	losses in vertebrates are coupled to those of paralogs and .. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2022 , 119,	11.5	2
89	Lottery, luck, or legacy?. <i>Evolution; International Journal of Organic Evolution</i> , 2022 ,	3.8	2
88	Mutation saturation for fitness effects at human CpG sites. <i>ELife</i> , 2021 , 10,	8.9	4
87	Impact of essential workers in the context of social distancing for epidemic control. <i>PLoS ONE</i> , 2021 , 16, e0255680	3.7	4
86	The evolution of group differences in changing environments. <i>PLoS Biology</i> , 2021 , 19, e3001072	9.7	10
85	Variable prediction accuracy of polygenic scores within an ancestry group. <i>ELife</i> , 2020 , 9,	8.9	112
84	Population genetics of the coral : Toward genomic prediction of bleaching. <i>Science</i> , 2020 , 369,	33.3	69
83	A comparison of humans and baboons suggests germline mutation rates do not track cell divisions. <i>PLoS Biology</i> , 2020 , 18, e3000838	9.7	23
82	A comparison of humans and baboons suggests germline mutation rates do not track cell divisions 2020 , 18, e3000838		
81	A comparison of humans and baboons suggests germline mutation rates do not track cell divisions 2020 , 18, e3000838		
80	A comparison of humans and baboons suggests germline mutation rates do not track cell divisions 2020 , 18, e3000838		
79	A comparison of humans and baboons suggests germline mutation rates do not track cell divisions 2020 , 18, e3000838		
78	A comparison of humans and baboons suggests germline mutation rates do not track cell divisions 2020 , 18, e3000838		
77	A comparison of humans and baboons suggests germline mutation rates do not track cell divisions 2020 , 18, e3000838		
76	Deconstructing the sources of genotype-phenotype associations in humans. <i>Science</i> , 2019 , 365, 1396-1400,	10.3	68
75	Overlooked roles of DNA damage and maternal age in generating human germline mutations. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2019 , 116, 9491-9500	11.5	75
74	Measuring intolerance to mutation in human genetics. <i>Nature Genetics</i> , 2019 , 51, 772-776	36.3	47

73	Large, three-generation human families reveal post-zygotic mosaicism and variability in germline mutation accumulation. <i>ELife</i> , 2019 , 8,	8.9	50
72	Author response: Variable prediction accuracy of polygenic scores within an ancestry group 2019 ,		6
71	Signatures of replication timing, recombination, and sex in the spectrum of rare variants on the human X chromosome and autosomes. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2019 , 116, 17916-17924	11.5	22
70	Natural selection interacts with recombination to shape the evolution of hybrid genomes. <i>Science</i> , 2018 , 360, 656-660	33.3	176
69	Identifying genetic variants that affect viability in large cohorts. <i>PLoS Biology</i> , 2017 , 15, e2002458	9.7	49
68	Contrasting Determinants of Mutation Rates in Germline and Soma. <i>Genetics</i> , 2017 , 207, 255-267	4	14
67	The population genetics of human disease: The case of recessive, lethal mutations. <i>PLoS Genetics</i> , 2017 , 13, e1006915	6	21
66	Repeated losses of PRDM9-directed recombination despite the conservation of PRDM9 across vertebrates. <i>ELife</i> , 2017 , 6,	8.9	70
65	Variation in the molecular clock of primates. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2016 , 113, 10607-12	11.5	134
64	Interpreting the Dependence of Mutation Rates on Age and Time. <i>PLoS Biology</i> , 2016 , 14, e1002355	9.7	77
63	Human Germline Mutation and the Erratic Evolutionary Clock. <i>PLoS Biology</i> , 2016 , 14, e2000744	9.7	48
62	A genetic method for dating ancient genomes provides a direct estimate of human generation interval in the last 45,000 years. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2016 , 113, 5652-7	11.5	75
61	An estimate of the average number of recessive lethal mutations carried by humans. <i>Genetics</i> , 2015 , 199, 1243-54	4	45
60	Stable recombination hotspots in birds. <i>Science</i> , 2015 , 350, 928-32	33.3	187
59	Evolutionary history inferred from the de novo assembly of a nonmodel organism, the blue-eyed black lemur. <i>Molecular Ecology</i> , 2015 , 24, 4392-405	5.7	16
58	Variation in Rural African Gut Microbiota Is Strongly Correlated with Colonization by <i>Entamoeba</i> and Subsistence. <i>PLoS Genetics</i> , 2015 , 11, e1005658	6	134
57	Determinants of mutation rate variation in the human germline. <i>Annual Review of Genomics and Human Genetics</i> , 2014 , 15, 47-70	9.7	204
56	Multiple instances of ancient balancing selection shared between humans and chimpanzees. <i>Science</i> , 2013 , 339, 1578-82	33.3	204

55	The convergent evolution of blue iris pigmentation in primates took distinct molecular paths. <i>American Journal of Physical Anthropology</i> , 2013 , 151, 398-407	2.5	8
54	Ancestry runs deeper than blood: the evolutionary history of ABO points to cryptic variation of functional importance. <i>BioEssays</i> , 2013 , 35, 862-7	4.1	20
53	Different selective pressures shape the evolution of Toll-like receptors in human and African great ape populations. <i>Human Molecular Genetics</i> , 2013 , 22, 4829-40	5.6	38
52	The ABO blood group is a trans-species polymorphism in primates. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2012 , 109, 18493-8	11.5	98
51	A fine-scale chimpanzee genetic map from population sequencing. <i>Science</i> , 2012 , 336, 193-8	33.3	218
50	Evaluating the evidence for transmission distortion in human pedigrees. <i>Genetics</i> , 2012 , 191, 215-32	4	34
49	Classic selective sweeps were rare in recent human evolution. <i>Science</i> , 2011 , 331, 920-4	33.3	345
48	Genome-sequencing anniversary. The golden age of human population genetics. <i>Science</i> , 2011 , 331, 547	33.3	4
47	A population genetics-phylogenetics approach to inferring natural selection in coding sequences. <i>PLoS Genetics</i> , 2011 , 7, e1002395	6	72
46	The case of the fickle fingers: how the PRDM9 zinc finger protein specifies meiotic recombination hotspots in humans. <i>PLoS Biology</i> , 2011 , 9, e1001211	9.7	57
45	Variation in human recombination rates and its genetic determinants. <i>PLoS ONE</i> , 2011 , 6, e20321	3.7	84
44	Shifts in the intensity of purifying selection: an analysis of genome-wide polymorphism data from two closely related yeast species. <i>Genome Research</i> , 2010 , 20, 1558-73	9.7	57
43	Pervasive natural selection in the Drosophila genome?. <i>PLoS Genetics</i> , 2009 , 5, e1000495	6	269
42	Broad-scale recombination patterns underlying proper disjunction in humans. <i>PLoS Genetics</i> , 2009 , 5, e1000658	6	77
41	Natural selection on genes that underlie human disease susceptibility. <i>Current Biology</i> , 2008 , 18, 883-9	6.3	166
40	High-resolution mapping of crossovers reveals extensive variation in fine-scale recombination patterns among humans. <i>Science</i> , 2008 , 319, 1395-8	33.3	287
39	The timing of selection at the human FOXP2 gene. <i>Molecular Biology and Evolution</i> , 2008 , 25, 1257-9	8.3	109
38	No effect of recombination on the efficacy of natural selection in primates. <i>Genome Research</i> , 2008 , 18, 544-54	9.7	44

37	Combining sperm typing and linkage disequilibrium analyses reveals differences in selective pressures or recombination rates across human populations. <i>Genetics</i> , 2007 , 175, 795-804	4	9
36	An evolutionary view of human recombination. <i>Nature Reviews Genetics</i> , 2007 , 8, 23-34	30.1	206
35	Genetic structure of chimpanzee populations. <i>PLoS Genetics</i> , 2007 , 3, e66	6	119
34	A new approach to estimate parameters of speciation models with application to apes. <i>Genome Research</i> , 2007 , 17, 1505-19	9.7	201
33	Directional positive selection on an allele of arbitrary dominance. <i>Genetics</i> , 2006 , 172, 713-8	4	60
32	How reliable are empirical genomic scans for selective sweeps?. <i>Genome Research</i> , 2006 , 16, 702-12	9.7	296
31	Genetics. Motivating hotspots. <i>Science</i> , 2005 , 310, 247-8	33.3	7
30	Fine-scale recombination patterns differ between chimpanzees and humans. <i>Nature Genetics</i> , 2005 , 37, 429-34	36.3	226
29	The rise and fall of the chemoattractant receptor GPR33. <i>Journal of Biological Chemistry</i> , 2005 , 280, 31068-75	6.4	19
28	Evidence for a complex demographic history of chimpanzees. <i>Molecular Biology and Evolution</i> , 2004 , 21, 799-808	8.3	104
27	Insights into recombination from patterns of linkage disequilibrium in humans. <i>Genetics</i> , 2004 , 167, 387-97	4	38
26	Absence of the TAP2 human recombination hotspot in chimpanzees. <i>PLoS Biology</i> , 2004 , 2, e155	9.7	98
25	A neutral explanation for the correlation of diversity with recombination rates in humans. <i>American Journal of Human Genetics</i> , 2003 , 72, 1527-35	11	231
24	Estimating the time since the fixation of a beneficial allele. <i>Genetics</i> , 2003 , 164, 1667-76	4	79
23	Evidence for population growth in humans is confounded by fine-scale population structure. <i>Trends in Genetics</i> , 2002 , 18, 559-63	8.5	123
22	Molecular evolution of FOXP2, a gene involved in speech and language. <i>Nature</i> , 2002 , 418, 869-72	50.4	1128
21	Evidence for positive selection and population structure at the human MAO-A gene. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2002 , 99, 862-7	11.5	82
20	The signature of positive selection at randomly chosen loci. <i>Genetics</i> , 2002 , 160, 1179-89	4	374

19	Testing models of selection and demography in <i>Drosophila simulans</i> . <i>Genetics</i> , 2002 , 162, 203-16	4	144
18	Recombination and the frequency spectrum in <i>Drosophila melanogaster</i> and <i>Drosophila simulans</i> . <i>Molecular Biology and Evolution</i> , 2001 , 18, 291-8	8.3	44
17	Linkage disequilibrium in humans: models and data. <i>American Journal of Human Genetics</i> , 2001 , 69, 1-14	11	920
16	Why is there so little intragenic linkage disequilibrium in humans?. <i>Genetical Research</i> , 2001 , 77, 143-51	1.1	71
15	Regions of lower crossing over harbor more rare variants in African populations of <i>Drosophila melanogaster</i> . <i>Genetics</i> , 2001 , 158, 657-65	4	86
14	Adjusting the focus on human variation. <i>Trends in Genetics</i> , 2000 , 16, 296-302	8.5	231
13	When did the human population size start increasing?. <i>Genetics</i> , 2000 , 155, 1865-74	4	102
12	A genome-wide departure from the standard neutral model in natural populations of <i>Drosophila</i> . <i>Genetics</i> , 2000 , 156, 257-68	4	133
11	An evaluation of a hierarchical branching process as a model for species diversification. <i>Paleobiology</i> , 1998 , 24, 498-511	2.6	11
10	A paternal bias in germline mutation is widespread across amniotes and can arise independently of cell divisions		1
9	Natural selection interacts with the local recombination rate to shape the evolution of hybrid genomes		6
8	A comparison of humans and baboons suggests germline mutation rates do not track cell divisions		1
7	Impact of essential workers in the context of social distancing for epidemic control		1
6	Overlooked roles of DNA damage and maternal age in generating human germline mutations		4
5	Measuring Intolerance to Mutation In Human Genetics		3
4	Signatures of replication timing, recombination and sex in the spectrum of rare variants on the human X chromosome and autosomes		3
3	Large, three-generation CEPH families reveal post-zygotic mosaicism and variability in germline mutation accumulation		5
2	Variable prediction accuracy of polygenic scores within an ancestry group		18

1 Population genetics of the coral *Acropora millepora*: Towards a genomic predictor of bleaching
