#	ARTICLE	IF	CITATIONS
1	Modelling Salmonella transmission among pigs from farm to slaughterhouse: Interplay between management variability and epidemiological uncertainty. <i>International Journal of Food Microbiology</i> , 2016, 229, 33-43.	4.7	13
2	Management of nurse shortage and its impact on pathogen dissemination in the intensive care unit. <i>Epidemics</i> , 2014, 9, 62-69.	3.0	21
3	Thermodynamic Concepts in the Study of Microbial Populations: Age Structure in <i>Plasmodium falciparum</i> Infected Red Blood Cells. <i>PLoS ONE</i> , 2011, 6, e26690.	2.5	2
4	Individual-based modelling and simulation of microbial processes: yeast fermentation and multi-species composting. <i>Mathematical and Computer Modelling of Dynamical Systems</i> , 2010, 16, 489-510.	2.2	11
5	Mathematical modelling methodologies in predictive food microbiology: A SWOT analysis. <i>International Journal of Food Microbiology</i> , 2009, 134, 2-8.	4.7	46
6	Individual-based Modelling: An Essential Tool for Microbiology. <i>Journal of Biological Physics</i> , 2008, 34, 19-37.	1.5	77
7	Analysis and IbM simulation of the stages in bacterial lag phase: Basis for an updated definition. <i>Journal of Theoretical Biology</i> , 2008, 252, 56-68.	1.7	31
8	Effect of the haematocrit layer geometry on <i>Plasmodium falciparum</i> static thin-layer in vitro cultures. <i>Malaria Journal</i> , 2008, 7, 203.	2.3	9
9	Individual-based model and simulation of <i>Plasmodium falciparum</i> infected erythrocyte in vitro cultures. <i>Journal of Theoretical Biology</i> , 2007, 248, 448-459.	1.7	12
10	Individual-based modelling of bacterial cultures to study the microscopic causes of the lag phase. <i>Journal of Theoretical Biology</i> , 2006, 241, 939-953.	1.7	33
