#	ARTICLE	IF	CITATIONS
1	Multicenter bonding within the AIM theory. Theoretical Chemistry Accounts, 2001, 105, 292-298.	1.4	86
2	On the definition of bond orders at correlated level. Chemical Physics Letters, 2003, 374, 567-571.	2.6	52
3	On the density matrix of effectively unpaired electrons. Chemical Physics Letters, 2001, 346, 283-287.	2.6	51
4	Variational Optimization of the Second-Order Density Matrix Corresponding to a Seniority-Zero Configuration Interaction Wave Function. Journal of Chemical Theory and Computation, 2015, 11, 4064-4076.	5.3	46
5	Bond Orders and Their Relationships with Cumulant and Unpaired Electron Densities. Journal of Physical Chemistry A, 2003, 107, 127-130.	2.5	45
6	Configuration interaction wave functions: A seniority number approach. Journal of Chemical Physics, 2014, 140, 234103.	3.0	39
7	Pair Population Analysis within AIM Theory. Journal of Physical Chemistry A, 2000, 104, 9130-9135.	2.5	37
8	Seniority number in spin-adapted spaces and compactness of configuration interaction wave functions. Journal of Chemical Physics, 2013, 139, 084103.	3.0	37
9	A hybrid configuration interaction treatment based on seniority number and excitation schemes. Journal of Chemical Physics, 2014, 141, 244118.	3.0	36
10	On the Physical Meaning of Bond Indices from the Population Analysis of Higher Order Densities. Journal of Physical Chemistry A, 1998, 102, 7176-7180.	2.5	35
11	Local spin: A treatment beyond single determinant wave functions. Chemical Physics Letters, 2009, 470, 136-139.	2.6	34
12	Energy decompositions according to physical space partitioning schemes. Journal of Chemical Physics, 2005, 122, 074102.	3.0	33
13	Atomic valence in molecular systems. Chemical Physics Letters, 2003, 375, 45-53.	2.6	32
14	Studies of Population Analysis at the Correlated Level: Determination of Three-Center Bond Indices. Journal of Physical Chemistry A, 2004, 108, 4132-4137.	2.5	32
15	Determination of Local Spins by Means of a Spin-Free Treatment. Journal of Chemical Theory and Computation, 2011, 7, 3560-3566.	5.3	32
16	On the definition of the spin-free cumulant of the second-order reduced density matrix. Journal of Chemical Physics, 2002, 117, 5497-5498.	3.0	31
17	On the Nature of C ⁺ Li Bonding in Lithiated Hydrocarbons and Lithiocarbons. Journal of Physical Chemistry A, 2002, 106, 1019-1025.	2.5	30
18	On the measure of electron correlation and entanglement in quantum chemistry based on the cumulant of the second-order reduced density matrix. Journal of Chemical Physics, 2010, 133, 144104.	3.0	28

#	ARTICLE	IF	CITATIONS
19	On the definition of the effectively unpaired electron density matrix: A similarity measure approach. Chemical Physics Letters, 2006, 429, 286-288.	2.6	27
20	A study of the partitioning of the first-order reduced density matrix according to the theory of atoms in molecules. Journal of Chemical Physics, 2005, 123, 144113.	3.0	26
21	Electron-density topology in molecular systems: Paired and unpaired densities. Journal of Chemical Physics, 2005, 123, 144116.	3.0	25
22	Direct variational determination of the two-electron reduced density matrix for doubly occupied-configuration-interaction wave functions: The influence of three-index $\langle N \rangle$ -representability conditions. Journal of Chemical Physics, 2018, 148, 024105.	3.0	25
23	Topological Population Analysis from Higher Order Densities II. The Correlated Case. Journal of Mathematical Chemistry, 2002, 32, 241-248.	1.5	24
24	Polynomial scaling approximations and dynamic correlation corrections to doubly occupied configuration interaction wave functions. Journal of Chemical Physics, 2015, 143, 104106.	3.0	24
25	On the nature of multicenter bonding in simple atomic clusters. Computational and Theoretical Chemistry, 2000, 505, 283-288.	1.5	23
26	Topological population analysis from higher order densities. I. Hartree-Fock level. Journal of Mathematical Chemistry, 2000, 28, 83-90.	1.5	23
27	Comment on "Characterizing unpaired electrons from one-particle density matrix" [M. Head-Gordon, Chem. Phys. Lett. 372 (2003) 508-511]. Chemical Physics Letters, 2003, 380, 486-487.	2.6	23
28	Determination of Three-Center Bond Indices from Population Analyses: A Fuzzy Atom Treatment. Journal of Physical Chemistry A, 2005, 109, 6587-6591.	2.5	23
29	An orbital localization criterion based on the theory of "fuzzy" atoms. Journal of Computational Chemistry, 2006, 27, 596-608.	3.3	23
30	Matrix elements of the third-order spin-adapted reduced Hamiltonian. Physical Review A, 1988, 38, 2721-2728.	2.5	22
31	The iterative solution of the Contracted Schrödinger Equation: a new quantum chemical method. Computational and Theoretical Chemistry, 2001, 537, 1-8.	1.5	22
32	Treatments of non-nuclear attractors within the theory of atoms in molecules. Chemical Physics Letters, 2005, 407, 379-383.	2.6	21
33	Relationships between Cumulant and Spin-Density Matrices: Application to the Decomposition of Spin. Journal of Physical Chemistry A, 2010, 114, 2344-2349.	2.5	21
34	Laplacian Field of the Effectively Unpaired Electron Density: Determination of Many-Body Effects on Electron Distributions. Journal of Physical Chemistry A, 2007, 111, 3166-3172.	2.5	19
35	Calculation of traces of p-order replacement operators over N-electron spin-adapted spaces. Physical Review A, 1993, 47, 923-928.	2.5	18
36	A decomposition of the number of effectively unpaired electrons and its physical meaning. Chemical Physics Letters, 2009, 476, 101-103.	2.6	17

#	ARTICLE	IF	CITATIONS
37	Performance of Shannon-entropy compacted N-electron wave functions for configuration interaction methods. <i>Theoretical Chemistry Accounts</i> , 2016, 135, 1.	1.4	16
38	A study of the relationships between unpaired electron density, spin-density and cumulant matrices. <i>Theoretical Chemistry Accounts</i> , 2011, 128, 405-410.	1.4	15
39	Chemical bonding analysis in boron clusters by means of localized orbitals according to the electron localization function topology. <i>Theoretical Chemistry Accounts</i> , 2015, 134, 1.	1.4	15
40	Correlated holes and their relationships with reduced density matrices and cumulants. <i>Journal of Chemical Physics</i> , 2005, 122, 084117.	3.0	14
41	Covalent bond orders revisited: the open-shell case. <i>Physical Chemistry Chemical Physics</i> , 2008, 10, 5144.	2.8	14
42	Electronic Structure and Effectively Unpaired Electron Density Topology in κ -Closo-Boranes: Nonclassical Three-Center Two-Electron Bonding. <i>Journal of Chemical Theory and Computation</i> , 2011, 7, 979-987.	5.3	14
43	Variational reduced density matrix method in the doubly occupied configuration interaction space using three-particle κ -N-representability conditions. <i>Journal of Chemical Physics</i> , 2018, 149, 194105.	3.0	14
44	Magnetic Properties of Mononuclear Co(II) Complexes with Carborane Ligands. <i>Inorganic Chemistry</i> , 2018, 57, 7763-7769.	4.0	14
45	Generalization to apth-order space of the independent-pair model, within the spin-adapted reduced-Hamiltonian theoretical framework. <i>Physical Review A</i> , 1988, 37, 2868-2871.	2.5	13
46	Topology of the Effectively Paired and Unpaired Electron Densities for Complex Bonding Patterns: The Three-Center Two-Electron Bonding Case. <i>Journal of Chemical Theory and Computation</i> , 2009, 5, 2030-2043.	5.3	13
47	Descriptions of local spins in the three-dimensional physical space. <i>Chemical Physics Letters</i> , 2011, 504, 236-240.	2.6	13
48	Fukui and dual-descriptor matrices within the framework of spin-polarized density functional theory. <i>Physical Chemistry Chemical Physics</i> , 2013, 15, 9594.	2.8	13
49	Atom and Bond Fukui Functions and Matrices: A Hirshfeld's Atoms-in-Molecule Approach. <i>ChemPhysChem</i> , 2016, 17, 2881-2889.	2.1	13
50	Variational reduced density matrix method in the doubly-occupied configuration interaction space using four-particle κ -N-representability conditions: Application to the XXZ model of quantum magnetism. <i>Journal of Chemical Physics</i> , 2019, 151, 154104.	3.0	13
51	Energy decompositions according to physical space partitioning schemes: Treatments of the density cumulant. <i>Journal of Chemical Physics</i> , 2007, 127, 104110.	3.0	12
52	Topology of the Electron Density in Open-Shell Systems. <i>Journal of Physical Chemistry A</i> , 2010, 114, 1200-1206.	2.5	12
53	Direct computation of traces of p-order replacement operators over N-electron spin-adapted spaces. <i>Physical Review A</i> , 1995, 52, 2446-2448.	2.5	11
54	Covalent bond indices and ionicities from similarity measures. <i>Chemical Physics Letters</i> , 2007, 442, 157-163.	2.6	11

#	ARTICLE	IF	CITATIONS
55	Electronic structure studies of diradicals derived from Closo-Carboranes. Theoretical Chemistry Accounts, 2013, 132, 1.	1.4	11
56	An orbital localization criterion based on the topological analysis of the electron localization function. International Journal of Quantum Chemistry, 2013, 113, 1401-1408.	2.0	11
57	Magnetic Properties of Co(II) Complexes with Polyhedral Carborane Ligands. Inorganic Chemistry, 2019, 58, 2550-2557.	4.0	11
58	Unrestricted treatment for the direct variational determination of the two-electron reduced density matrix for doubly occupied-configuration-interaction wave functions. Journal of Chemical Physics, 2019, 150, 164106.	3.0	11
59	Photochemistry with high power ultraviolet lasers. Canadian Journal of Chemistry, 1983, 61, 1023-1026.	1.1	10
60	Representation of the spin operator in the spin-free second quantized approach. Computational and Theoretical Chemistry, 1998, 426, 25-28.	1.5	10
61	Nature of nonclassical bonds in Closo-Boranes: Nonlinear population analysis approach. Journal of Computational Chemistry, 1999, 20, 1085-1090.	3.3	10
62	Decomposition of the First-Order Reduced Density Matrix: An Isopycnic Localization Treatment. Journal of Physical Chemistry A, 2006, 110, 9254-9260.	2.5	10
63	Orbital Localization Criterion as a Complementary Tool in the Bonding Analysis by Means of Electron Localization Function: Study of the Si _n (BH) _{5-n} ²⁻ (<i>n</i>) Tj ETQq12150.784314 rgBT	0.784314	10
64	Toward (car)borane-based molecular magnets. Theoretical Chemistry Accounts, 2015, 134, 1.	1.4	10
65	Spin-adapted reduced-Hamiltonian theory: Application of the independent-pair model to the isoelectronic sequence of lithium. Physical Review A, 1987, 35, 3132-3135.	2.5	9
66	Multicenter bonding in open-shell systems. A nonlinear population analysis approach. International Journal of Quantum Chemistry, 2000, 77, 710-715.	2.0	9
67	Determination of atomic valence indices from population analyses at correlated level. Journal of Computational Chemistry, 2003, 24, 1902-1909.	3.3	9
68	Treatment of non-nuclear attractors within the theory of atoms in molecules II: Energy decompositions. Chemical Physics Letters, 2006, 426, 426-430.	2.6	9
69	Grand-canonical-ensemble representability problem for the one-electron reduced density matrix. Physical Review A, 2007, 75, .	2.5	9
70	Description of functional groups by means of domain-restricted reduced density matrices. Theoretical Chemistry Accounts, 2007, 118, 827-835.	1.4	9
71	Fukui and dual-descriptor matrices in the basis-set representation: A spin-free approach. Chemical Physics Letters, 2012, 533, 114-117.	2.6	9
72	Two-photon UV excitation of SO ₂ and laser-induced fluorescence from SO. Journal of Photochemistry and Photobiology, 1983, 23, 97-102.	0.6	8

#	ARTICLE	IF	CITATIONS
73	Spin contamination-free N-electron wave functions in the excitation-based configuration interaction treatment. <i>Journal of Chemical Physics</i> , 2016, 145, 014109.	3.0	8
74	Hybrid Treatments Based on Determinant Seniority Numbers and Spatial Excitation Levels in the Configuration Interaction Framework. <i>Advances in Quantum Chemistry</i> , 2018, , 315-332.	0.8	8
75	Analysis of Local and Global Aromaticity in Si ₃ C ₅ and Si ₄ C ₈ Clusters. <i>Aromatic Species Containing Planar Tetracoordinate Carbon. Chemistry</i> , 2021, 3, 1101-1112.	2.2	7
76	Variational determination of the two-particle reduced density matrix within the doubly occupied configuration interaction space: exploiting translational and reflection invariance. <i>Journal of Statistical Mechanics: Theory and Experiment</i> , 2021, 2021, 013110.	2.3	6
77	Ground and excited state similarity studies by means of Fukui and dual-descriptor matrices. <i>Chemical Physics Letters</i> , 2012, 549, 103-107.	2.6	5
78	A study of the compactness of wave functions based on Shannon entropy indices: a seniority number approach. <i>Theoretical Chemistry Accounts</i> , 2015, 134, 1.	1.4	5
79	Incorporating dynamic correlation into the variational determination method of the second-order reduced density matrix in the doubly occupied configuration interaction space. <i>International Journal of Quantum Chemistry</i> , 2020, 120, e26256.	2.0	5
80	Calculation of moments of spectral density distributions in finite-dimensional N-electron spin-adapted spaces. <i>Journal of Physics A</i> , 1995, 28, 271-279.	1.6	4
81	Determination of Energies and Electronic Densities of Functional Groups According to Partitionings in the Physical Space. <i>Journal of Physical Chemistry A</i> , 2008, 112, 10023-10028.	2.5	4
82	An orbital localization criterion based on the topological analysis of the electron localization function at correlated level. <i>International Journal of Quantum Chemistry</i> , 2018, 118, e25588.	2.0	4
83	Variational determination of the two-electron reduced density matrix within the doubly occupied configuration interaction scheme: An extension to the study of open-shell systems. <i>Journal of Chemical Physics</i> , 2020, 153, 084101.	3.0	4
84	Variational determination of ground and excited-state two-electron reduced density matrices in the doubly occupied configuration space: A dispersion operator approach. <i>Journal of Chemical Physics</i> , 2021, 154, 224104.	3.0	4
85	A formal construction of the N-electron Hamiltonian matrix and its blocks factorization. <i>Societa Italiana Di Fisica Nuovo Cimento B-General Physics, Relativity Astronomy and Mathematical Physics and Methods</i> , 1991, 106, 1079-1084.	0.2	3
86	Calculation of the dimension of full configuration interaction spaces: application to the determination of spectroscopic terms. <i>Computational and Theoretical Chemistry</i> , 1993, 287, 63-66.	1.5	3
87	Symmetry-adapted formulation of the combined G-particle-hole hypervirial equation and Hermitian operator method. <i>Journal of Mathematical Chemistry</i> , 2014, 52, 1794-1806.	1.5	3
88	Determination of heisenberg exchange coupling constants in clusters with magnetic sites: A local spin approach. <i>International Journal of Quantum Chemistry</i> , 2014, 114, 952-958.	2.0	3
89	Determination of exchange coupling constants in linear polyradicals by means of local spins. <i>Theoretical Chemistry Accounts</i> , 2017, 136, 1.	1.4	3
90	A general iterative time-independent perturbation theory. <i>Canadian Journal of Physics</i> , 1985, 63, 1157-1161.	1.1	2
