#	ARTICLE	IF	CITATIONS
1	Involvement of Multiple Epitope-Specific Cytotoxic T-Lymphocyte Responses in Vaccine-Based Control of Simian Immunodeficiency Virus Replication in Rhesus Macaques. <i>Journal of Virology</i> , 2006, 80, 1949-1958.	3.4	60
2	Gag-Specific Cytotoxic T-Lymphocyte-Based Control of Primary Simian Immunodeficiency Virus Replication in a Vaccine Trial. <i>Journal of Virology</i> , 2008, 82, 10199-10206.	3.4	57
3	Long-Term Control of Simian Immunodeficiency Virus Replication with Central Memory CD4 + T-Cell Preservation after Nonsterile Protection by a Cytotoxic T-Lymphocyte-Based Vaccine. <i>Journal of Virology</i> , 2007, 81, 5202-5211.	3.4	53
4	Polyfunctional CD4 ⁺ T-Cell Induction in Neutralizing Antibody-Triggered Control of Simian Immunodeficiency Virus Infection. <i>Journal of Virology</i> , 2009, 83, 5514-5524.	3.4	45
5	Impact of Cytotoxic-T-Lymphocyte Memory Induction without Virus-Specific CD4 ⁺ T-Cell Help on Control of a Simian Immunodeficiency Virus Challenge in Rhesus Macaques. <i>Journal of Virology</i> , 2009, 83, 9339-9346.	3.4	40
6	Association of Major Histocompatibility Complex Class I Haplotypes with Disease Progression after Simian Immunodeficiency Virus Challenge in Burmese Rhesus Macaques. <i>Journal of Virology</i> , 2012, 86, 6481-6490.	3.4	33
7	Pulmonary monocytes interact with effector T cells in the lung tissue to drive TRM differentiation following viral infection. <i>Mucosal Immunology</i> , 2020, 13, 161-171.	6.0	32
8	Induction of CD8 ⁺ Cells Able To Suppress CCR5-Tropic Simian Immunodeficiency Virus SIVmac239 Replication by Controlled Infection of CXCR4-Tropic Simian-Human Immunodeficiency Virus in Vaccinated Rhesus Macaques. <i>Journal of Virology</i> , 2007, 81, 11640-11649.	3.4	28
9	Evaluation of the immunogenicity of replication-competent V-knocked-out and replication-defective F-deleted Sendai virus vector-based vaccines in macaques. <i>Vaccine</i> , 2008, 26, 6839-6843.	3.8	27
10	Hematopoietic Stem/Progenitor Cells and the Pathogenesis of HIV/AIDS. <i>Frontiers in Cellular and Infection Microbiology</i> , 2020, 10, 60.	3.9	21
11	Impact of Vaccination on Cytotoxic T Lymphocyte Immunodominance and Cooperation against Simian Immunodeficiency Virus Replication in Rhesus Macaques. <i>Journal of Virology</i> , 2012, 86, 738-745.	3.4	20
12	Broadening of CD8 ⁺ cell responses in vaccine-based simian immunodeficiency virus controllers. <i>Aids</i> , 2010, 24, 2777-2787.	2.2	15
13	Transcriptional gene silencing limits CXCR4-associated depletion of bone marrow CD34 ⁺ cells in HIV-1 infection. <i>Aids</i> , 2018, 32, 1737-1747.	2.2	15
14	Determination of a major histocompatibility complex class I restricting simian immunodeficiency virus Gag241-249 epitope. <i>Aids</i> , 2008, 22, 993-994.	2.2	11
15	The use of RetroNectin in studies requiring in vitro HIV-1 infection of human hematopoietic stem/progenitor cells. <i>Journal of Virological Methods</i> , 2017, 248, 234-237.	2.1	11
16	Abrogation of AIDS vaccine-induced cytotoxic T-lymphocyte efficacy in vivo due to a change in viral epitope flanking sequences. <i>Microbes and Infection</i> , 2008, 10, 285-292.	1.9	10
17	Recursion-based depletion of human immunodeficiency virus-specific naive CD4 + T cells may facilitate persistent viral replication and chronic viraemia leading to acquired immunodeficiency syndrome. <i>Medical Hypotheses</i> , 2016, 94, 81-85.	1.5	8
18	HIV Impacts CD34 ⁺ Progenitors Involved in T-Cell Differentiation During Coculture With Mouse Stromal OP9-DL1 Cells. <i>Frontiers in Immunology</i> , 2019, 10, 81.	4.8	8

#	ARTICLE	IF	CITATIONS
19	Vaccine-based, long-term, stable control of simian/human immunodeficiency virus 89.6PD replication in rhesus macaques. <i>Journal of General Virology</i> , 2007, 88, 652-659.	2.9	7
20	Gene Therapy Approaches to Functional Cure and Protection of Hematopoietic Potential in HIV Infection. <i>Pharmaceutics</i> , 2019, 11, 114.	4.5	4
21	CD8 + Cytotoxic-T-Lymphocyte Breadth Could Facilitate Early Immune Detection of Immunodeficiency Virus-Derived Epitopes with Limited Expression Levels. <i>MSphere</i> , 2019, 4, .	2.9	3
22	Dominant induction of vaccine antigen-specific cytotoxic T lymphocyte responses after simian immunodeficiency virus challenge. <i>Biochemical and Biophysical Research Communications</i> , 2011, 408, 615-619.	2.1	2
23	Editorial: Direct and Indirect Interactions of HIV With Host Cells. <i>Frontiers in Cellular and Infection Microbiology</i> , 2021, 11, 771370.	3.9	1
24	P17-19. Impact of single epitope-specific CD8+ T cell memory induction by prophylactic vaccination on immunodeficiency virus control. <i>Retrovirology</i> , 2009, 6, .	2.0	0
25	Spontaneous HIV controllers might be the key to prevent accelerated immunosenescence of effector CD8+ T cells. <i>Aids</i> , 2019, 33, 2253-2255.	2.2	0
26	Simian immunodeficiency virus infection and flow cytometric characterization of Japanese macaque () Tj ETQq0 0 0 rgBT /Overlock 10 T	0.8	0
27	Distinctive High Expression of Antiretroviral APOBEC3 Protein in Mouse Germinal Center B Cells. <i>Viruses</i> , 2022, 14, 832.	3.3	0
