| #  | Article                                                                                                                                                                                                                                    | IF  | CITATIONS |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 1  | Polycyclic aromatic hydrocarbons stimulate human CYP3A4 promoter activity via PXR. Toxicology<br>Letters, 2013, 222, 180-188.                                                                                                              | 0.8 | 79        |
| 2  | Human CYP3A4-mediated toxification of the pyrrolizidine alkaloid lasiocarpine. Food and Chemical Toxicology, 2019, 130, 79-88.                                                                                                             | 3.6 | 35        |
| 3  | The pyrrolizidine alkaloid senecionine induces CYP-dependent destruction of sinusoidal endothelial cells and cholestasis in mice. Archives of Toxicology, 2020, 94, 219-229.                                                               | 4.2 | 33        |
| 4  | Disturbance of gene expression in primary human hepatocytes by hepatotoxic pyrrolizidine alkaloids: A<br>whole genome transcriptome analysis. Toxicology in Vitro, 2015, 29, 1669-1682.                                                    | 2.4 | 31        |
| 5  | Structure-dependent induction of apoptosis by hepatotoxic pyrrolizidine alkaloids in the human<br>hepatoma cell line HepaRG: Single versus repeated exposure. Food and Chemical Toxicology, 2018, 114,<br>215-226.                         | 3.6 | 28        |
| 6  | Polycyclic Aromatic Hydrocarbons Activate the Aryl Hydrocarbon Receptor and the Constitutive<br>Androstane Receptor to Regulate Xenobiotic Metabolism in Human Liver Cells. International Journal<br>of Molecular Sciences, 2021, 22, 372. | 4.1 | 26        |
| 7  | Hepatotoxic pyrrolizidine alkaloids induce DNA damage response in rat liver in a 28-day feeding study.<br>Archives of Toxicology, 2020, 94, 1739-1751.                                                                                     | 4.2 | 25        |
| 8  | Structure–activity relationship in the passage of different pyrrolizidine alkaloids through the<br>gastrointestinal barrier: ABCB1 excretes heliotrine and echimidine. Molecular Nutrition and Food<br>Research, 2014, 58, 995-1004.       | 3.3 | 24        |
| 9  | Active elimination of the marine biotoxin okadaic acid by P-glycoprotein through an in vitro gastrointestinal barrier. Toxicology Letters, 2014, 225, 311-317.                                                                             | 0.8 | 23        |
| 10 | The marine biotoxin okadaic acid affects intestinal tight junction proteins in human intestinal cells.<br>Toxicology in Vitro, 2019, 58, 150-160.                                                                                          | 2.4 | 19        |
| 11 | Differences in metabolism of the marine biotoxin okadaic acid by human and rat cytochrome P450 monooxygenases. Archives of Toxicology, 2016, 90, 2025-2036.                                                                                | 4.2 | 18        |
| 12 | All-trans retinoic acid enhances the transport of phase II metabolites of benzo[a]pyrene by inducing<br>the Breast Cancer Resistance Protein expression in Caco-2 cells. Toxicology Letters, 2010, 197, 151-155.                           | 0.8 | 16        |
| 13 | Multidrug resistance-associated proteins are involved in the transport of the glutathione conjugates of the ultimate carcinogen of benzo[a]pyrene in human Caco-2 cells. Archives of Toxicology, 2013, 87, 269-280.                        | 4.2 | 16        |
| 14 | In vitro characterization of hepatic toxicity of Alternaria toxins. Mycotoxin Research, 2019, 35, 157-168.                                                                                                                                 | 2.3 | 16        |
| 15 | Metabolism of okadaic acid by NADPH-dependent enzymes present in human or rat liver S9 fractions results in different toxic effects. Toxicology in Vitro, 2017, 42, 161-170.                                                               | 2.4 | 15        |
| 16 | PXR: Structure-specific activation by hepatotoxic pyrrolizidine alkaloids. Chemico-Biological<br>Interactions, 2018, 288, 38-48.                                                                                                           | 4.0 | 15        |
| 17 | Pyrrolizidine Alkaloids Induce Cell Death in Human HepaRG Cells in a Structure-Dependent Manner.<br>International Journal of Molecular Sciences, 2021, 22, 202.                                                                            | 4.1 | 15        |
| 18 | Sensitization of Human Liver Cells Toward Fasâ€Mediated Apoptosis by the Metabolically Activated Pyrrolizidine Alkaloid Lasiocarpine. Molecular Nutrition and Food Research, 2019, 63, e1801206.                                           | 3.3 | 12        |

STEFANIE HESSEL

| #  | Article                                                                                                                                                                                                                                           | IF  | CITATIONS |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 19 | Combined effects of okadaic acid and pectenotoxin-2, 13-desmethylspirolide C or yessotoxin in human<br>intestinal Caco-2†cells. Chemosphere, 2019, 228, 139-148.                                                                                  | 8.2 | 12        |
| 20 | Mixture effects of food-relevant polycyclic aromatic hydrocarbons on the activation of nuclear receptors and gene expression, benzo[a]pyrene metabolite profile and DNA damage in HepaRG cells. Food and Chemical Toxicology, 2021, 147, 111884.  | 3.6 | 11        |
| 21 | Utility of an appropriate reporter assay: Heliotrine interferes with GAL4/upstream activation sequence-driven reporter gene systems. Analytical Biochemistry, 2015, 487, 45-48.                                                                   | 2.4 | 10        |
| 22 | Doseâ€dependent induction of signaling pathways by the flavonoid quercetin in human primary<br>hepatocytes: A transcriptomic study. Molecular Nutrition and Food Research, 2015, 59, 1117-1129.                                                   | 3.3 | 10        |
| 23 | Okadaic acid activates Wnt/β-catenin-signaling in human HepaRG cells. Archives of Toxicology, 2019, 93,<br>1927-1939.                                                                                                                             | 4.2 | 10        |
| 24 | Comparison of long-term versus short-term effects of okadaic acid on the apoptotic status of human<br>HepaRG cells. Chemico-Biological Interactions, 2020, 317, 108937.                                                                           | 4.0 | 9         |
| 25 | Metabolism of the Marine Phycotoxin PTX-2 and Its Effects on Hepatic Xenobiotic Metabolism:<br>Activation of Nuclear Receptors and Modulation of the Phase I Cytochrome P450. Toxins, 2017, 9, 212.                                               | 3.4 | 8         |
| 26 | Active Transport of Hepatotoxic Pyrrolizidine Alkaloids in HepaRG Cells. International Journal of<br>Molecular Sciences, 2021, 22, 3821.                                                                                                          | 4.1 | 8         |
| 27 | Pyrrolizidine alkaloid-induced alterations of prostanoid synthesis in human endothelial cells.<br>Chemico-Biological Interactions, 2019, 298, 104-111.                                                                                            | 4.0 | 6         |
| 28 | Pyrrolizidine Alkaloids Disturb Bile Acid Homeostasis in the Human Hepatoma Cell Line HepaRG. Foods, 2021, 10, 161.                                                                                                                               | 4.3 | 6         |
| 29 | Analysis of CSH Conjugates of Bay- and Fjord-Region Dihydrodiol Epoxides of Benzo[a]pyrene and<br>Dibenzo[a,l]pyrene and their Transport in Enterocyte-like Caco-2 Cells. Polycyclic Aromatic<br>Compounds, 2012, 32, 221-237.                    | 2.6 | 5         |
| 30 | Pyrrolizidine alkaloid-induced transcriptomic changes in rat lungs in a 28-day subacute feeding study.<br>Archives of Toxicology, 2021, 95, 2785-2796.                                                                                            | 4.2 | 5         |
| 31 | The chemical structure impairs the intensity of genotoxic effects promoted by 1,2-unsaturated pyrrolizidine alkaloids in vitro. Food and Chemical Toxicology, 2022, 164, 113049.                                                                  | 3.6 | 5         |
| 32 | The Food Contaminants Pyrrolizidine Alkaloids Disturb Bile Acid Homeostasis Structure-Dependently in the Human Hepatoma Cell Line HepaRG. Foods, 2021, 10, 1114.                                                                                  | 4.3 | 4         |
| 33 | Organic Cation Transporter I and Na <sup>+</sup> /taurocholate Coâ€Transporting Polypeptide are<br>Involved in Retrorsineâ€and Senecionineâ€Induced Hepatotoxicity in HepaRG cells. Molecular Nutrition<br>and Food Research, 2022, 66, e2100800. | 3.3 | 4         |
| 34 | Identification of microRNAs Implicated in Modulating Senecionine-Induced Liver Toxicity in HepaRG Cells. Foods, 2022, 11, 532.                                                                                                                    | 4.3 | 2         |
| 35 | Metabolism of the lipophilic phycotoxin 13-Desmethylspirolide C using human and rat in vitro liver models. Toxicology Letters, 2019, 307, 17-25.                                                                                                  | 0.8 | 0         |
