#	ARTICLE	IF	CITATIONS
1	RECRUITMENT AND THE LOCAL DYNAMICS OF OPEN MARINE POPULATIONS. Annual Review of Ecology, Evolution, and Systematics, 1996, 27, 477-500.	6.7	1,048
2	Coral decline threatens fish biodiversity in marine reserves. Proceedings of the National Academy of Sciences of the United States of America, 2004, 101, 8251-8253.	3.3	751
3	Critical science gaps impede use of no-take fishery reserves. Trends in Ecology and Evolution, 2005, 20, 74-80.	4.2	673
4	Self-recruitment in a coral reef fish population. Nature, 1999, 402, 802-804.	13.7	654
5	Ocean acidification impairs olfactory discrimination and homing ability of a marine fish. Proceedings of the National Academy of Sciences of the United States of America, 2009, 106, 1848-1852.	3.3	587
6	Multiple disturbances and the global degradation of coral reefs: are reef fishes at risk or resilient?. Global Change Biology, 2006, 12, 2220-2234.	4.2	584
7	Local Replenishment of Coral Reef Fish Populations in a Marine Reserve. Science, 2007, 316, 742-744.	6.0	481
8	Coral Reef Fish Larvae Settle Close to Home. Current Biology, 2005, 15, 1314-1318.	1.8	472
9	Larval retention and connectivity among populations of corals and reef fishes: history, advances and challenges. Coral Reefs, 2009, 28, 307-325.	0.9	460
10	Climate change and the future for coral reef fishes. Fish and Fisheries, 2008, 9, 261-285.	2.7	449
11	Ocean acidification disrupts the innate ability of fish to detect predator olfactory cues. Ecology Letters, 2010, 13, 68-75.	3.0	444
12	Larval Export from Marine Reserves and the Recruitment Benefit for Fish and Fisheries. Current Biology, 2012, 22, 1023-1028.	1.8	412
13	Adaptive management of the Great Barrier Reef: A globally significant demonstration of the benefits of networks of marine reserves. Proceedings of the National Academy of Sciences of the United States of America, 2010, 107, 18278-18285.	3.3	408
14	Larval dispersal connects fish populations in a network of marine protected areas. Proceedings of the National Academy of Sciences of the United States of America, 2009, 106, 5693-5697.	3.3	403
15	Habitat complexity modifies the impact of piscivores on a coral reef fish population. Oecologia, 1998, 114, 50-59.	0.9	378
16	Connectivity, biodiversity conservation and the design of marine reserve networks for coral reefs. Coral Reefs, 2009, 28, 339-351.	0.9	314
17	Diversity and functional importance of coral-feeding fishes on tropical coral reefs. Fish and Fisheries, 2008, 9, 286-307.	2.7	300
18	Connectivity and resilience of coral reef metapopulations in marine protected areas: matching empirical efforts to predictive needs. Coral Reefs, 2009, 28, 327-337.	0.9	290

#	ARTICLE	IF	CITATIONS
19	DISTURBANCE, HABITAT STRUCTURE, AND THE DYNAMICS OF A CORAL-REEF FISH COMMUNITY. <i>Ecology</i> , 2000, 81, 2714-2729.	1.5	230
20	COMPETITION, PREDATION, AND DENSITY-DEPENDENT MORTALITY IN DEMERSAL MARINE FISHES. <i>Ecology</i> , 2005, 86, 2847-2859.	1.5	224
21	The influence of habitat complexity on postrecruitment processes in a temperate reef fish population. <i>Journal of Experimental Marine Biology and Ecology</i> , 1991, 151, 271-294.	0.7	207
22	Habitat specialisation and the distribution and abundance of coral-dwelling gobies. <i>Marine Ecology - Progress Series</i> , 1997, 152, 227-239.	0.9	197
23	Disturbance, habitat structure and the ecology of fishes on coral reefs. <i>Austral Ecology</i> , 1998, 23, 287-297.	0.7	185
24	Competitive Interactions Among Adults and Juveniles in a Coral Reef Fish. <i>Ecology</i> , 1987, 68, 1534-1547.	1.5	182
25	Population Connectivity and Conservation of Marine Biodiversity. <i>Oceanography</i> , 2007, 20, 100-111.	0.5	176
26	Coral reef conservation in the Anthropocene: Confronting spatial mismatches and prioritizing functions. <i>Biological Conservation</i> , 2019, 236, 604-615.	1.9	175
27	INTERSPECIFIC COMPETITION AND COEXISTENCE IN A GUILD OF CORAL-DWELLING FISHES. <i>Ecology</i> , 2001, 82, 2177-2189.	1.5	159
28	Increasing ocean temperature reduces the metabolic performance and swimming ability of coral reef damselfishes. <i>Global Change Biology</i> , 2011, 17, 2971-2979.	4.2	159
29	Management under uncertainty: guide-lines for incorporating connectivity into the protection of coral reefs. <i>Coral Reefs</i> , 2009, 28, 353-366.	0.9	157
30	Settlement strategies and distribution patterns of coral-reef fishes. <i>Journal of Experimental Marine Biology and Ecology</i> , 1998, 225, 219-238.	0.7	150
31	Dispersal of Grouper Larvae Drives Local Resource Sharing in a Coral Reef Fishery. <i>Current Biology</i> , 2013, 23, 626-630.	1.8	150
32	Food availability affects growth in a coral reef fish. <i>Oecologia</i> , 1986, 70, 136-139.	0.9	148
33	Relative Importance of Coral Cover, Habitat Complexity and Diversity in Determining the Structure of Reef Fish Communities. <i>PLoS ONE</i> , 2013, 8, e83178.	1.1	147
34	Bi-directional sex change in a coral-dwelling goby. <i>Behavioral Ecology and Sociobiology</i> , 1998, 43, 371-377.	0.6	132
35	Persistence of self-recruitment and patterns of larval connectivity in a marine protected area network. <i>Ecology and Evolution</i> , 2012, 2, 444-452.	0.8	131
36	Habitat choice, recruitment and the response of coral reef fishes to coral degradation. <i>Oecologia</i> , 2007, 153, 727-737.	0.9	128

#	ARTICLE	IF	CITATIONS
37	Permanent Genetic Resources added to Molecular Ecology Resources Database 1 May 2009â€“31 July 2009. <i>Molecular Ecology Resources</i> , 2009, 9, 1460-1466.	2.2	128
38	The threat of punishment enforces peaceful cooperation and stabilizes queues in a coral-reef fish. <i>Proceedings of the Royal Society B: Biological Sciences</i> , 2007, 274, 1093-1099.	1.2	127
39	Experimental evaluation of the effects of habitat structure and competitive interactions on the juveniles of two coral reef fishes. <i>Journal of Experimental Marine Biology and Ecology</i> , 1988, 123, 115-126.	0.7	124
40	Transgenerational marking of embryonic otoliths in marine fishes using barium stable isotopes. <i>Canadian Journal of Fisheries and Aquatic Sciences</i> , 2006, 63, 1193-1197.	0.7	124
41	Habitat biodiversity as a determinant of fish community structure on coral reefs. <i>Ecology</i> , 2011, 92, 2285-2298.	1.5	124
42	Population ecology of the temperate reef fish <i>Pseudolabrus celidotus</i> Bloch & Schneider (Pisces: Tj ETQq0 0 0 rgBT /Overlock 10 Tf 50 5 1984, 75, 257-276.	0.7	120
43	Coral reef fish smell leaves to find island homes. <i>Proceedings of the Royal Society B: Biological Sciences</i> , 2008, 275, 2831-2839.	1.2	120
44	Relative accuracy of three common methods of parentage analysis in natural populations. <i>Molecular Ecology</i> , 2013, 22, 1158-1170.	2.0	119
45	Connectivity dominates larval replenishment in a coastal reef fish metapopulation. <i>Proceedings of the Royal Society B: Biological Sciences</i> , 2011, 278, 2954-2961.	1.2	114
46	Ecology of rocky reef fish of northâ€“eastern New Zealand: A review. <i>New Zealand Journal of Marine and Freshwater Research</i> , 1988, 22, 445-462.	0.8	112
47	Estimating connectivity in marine populations: an empirical evaluation of assignment tests and parentage analysis under different gene flow scenarios. <i>Molecular Ecology</i> , 2009, 18, 1765-1776.	2.0	110
48	Some interactions between residents and recruits in two coral reef fishes. <i>Journal of Experimental Marine Biology and Ecology</i> , 1988, 114, 169-182.	0.7	108
49	The Importance of Recruitment to the Dynamics of a Coral Reef Fish Population. <i>Ecology</i> , 1990, 71, 1691-1698.	1.5	105
50	Variation in the structure of epifaunal invertebrate assemblages among coral hosts. <i>Coral Reefs</i> , 2010, 29, 957-973.	0.9	105
51	Herbivory and patch dynamics on rocky reefs in temperate Australasia: The roles of fish and sea urchins. <i>Austral Ecology</i> , 1990, 15, 505-520.	0.7	101
52	Larval fish dispersal in a coral-reef seascape. <i>Nature Ecology and Evolution</i> , 2017, 1, 148.	3.4	101
53	Associations between the abundance of piscivorous fishes and their prey on coral reefs: implications for prey-fish mortality. <i>Marine Biology</i> , 2001, 138, 383-397.	0.7	99
54	The influence of habitat and behavioural interactions on the local distribution of the wrasse, <i>Pseudolabrus celidotus</i> . <i>Environmental Biology of Fishes</i> , 1984, 10, 43-57.	0.4	97

#	ARTICLE	IF	CITATIONS
55	Spawning-site choice by female <i>Pseudolabrus celidotus</i> (Pisces: Labridae) and its influence on the mating system. <i>Behavioral Ecology and Sociobiology</i> , 1981, 8, 129-142.	0.6	94
56	Determinants of territory size in the pomacentrid reef fish, <i>Parma victoriae</i> . <i>Oecologia</i> , 1984, 61, 60-69.	0.9	91
57	Conservation of coral reef biodiversity: a comparison of reserve selection procedures for corals and fishes. <i>Biological Conservation</i> , 2003, 111, 53-62.	1.9	88
58	Fasting or feasting in a fish social hierarchy. <i>Current Biology</i> , 2008, 18, R372-R373.	1.8	88
59	Rarity in Coral Reef Fish Communities. , 2002, , 81-101.		85
60	Incorporating larval dispersal into <sc>MPA</sc> design for both conservation and fisheries. <i>Ecological Applications</i> , 2017, 27, 925-941.	1.8	83
61	Crucial knowledge gaps in current understanding of climate change impacts on coral reef fishes. <i>Journal of Experimental Biology</i> , 2010, 213, 894-900.	0.8	82
62	The influence of prey abundance on the feeding ecology of two piscivorous species of coral reef fish. <i>Journal of Experimental Marine Biology and Ecology</i> , 2004, 299, 155-184.	0.7	81
63	Specialization in habitat use by coral reef damselfishes and their susceptibility to habitat loss. <i>Ecology and Evolution</i> , 2012, 2, 2168-2180.	0.8	80
64	Large-scale, multidirectional larval connectivity among coral reef fish populations in the Great Barrier Reef Marine Park. <i>Molecular Ecology</i> , 2016, 25, 6039-6054.	2.0	79
65	Homing ability of adult cardinalfish is affected by elevated carbon dioxide. <i>Oecologia</i> , 2012, 168, 269-276.	0.9	77
66	Probability of successful larval dispersal declines fivefold over 1 km in a coral reef fish. <i>Proceedings of the Royal Society B: Biological Sciences</i> , 2012, 279, 1883-1888.	1.2	74
67	Habitat specialisation and overlap in a guild of coral reef cardinalfishes (Apogonidae). <i>Marine Ecology - Progress Series</i> , 2005, 305, 163-175.	0.9	73
68	Patch formation by herbivorous fish in a temperate Australian kelp forest. <i>Oecologia</i> , 1990, 85, 57-68.	0.9	72
69	Separating Ecological Effects of Habitat Fragmentation, Degradation, and Loss on Coral Commensals. <i>Ecology</i> , 2001, 82, 3435.	1.5	69
70	Successful validation of a larval dispersal model using genetic parentage data. <i>PLoS Biology</i> , 2019, 17, e3000380.	2.6	68
71	High rate of prey consumption in a small predatory fish on coral reefs. <i>Coral Reefs</i> , 2012, 31, 909-918.	0.9	67
72	Habitat selection and aggression as determinants of spatial segregation among damselfish on a coral reef. <i>Coral Reefs</i> , 2001, 20, 289-298.	0.9	66

#	ARTICLE	IF	CITATIONS
73	Habitat dynamics, marine reserve status, and the decline and recovery of coral reef fish communities. <i>Ecology and Evolution</i> , 2014, 4, 337-354.	0.8	66
74	Numerical and Energetic Processes in the Ecology of Coral Reef Fishes. , 2002, , 221-238.		65
75	Foragers versus farmers: contrasting effects of two behavioural groups of herbivores on coral reefs. <i>Oecologia</i> , 2005, 145, 445-453.	0.9	65
76	Effects of territorial damselfish on an algal-dominated coastal coral reef. <i>Coral Reefs</i> , 2005, 24, 606-620.	0.9	64
77	Climate change and the performance of larval coral reef fishes: the interaction between temperature and food availability. , 2013, 1, cot024-cot024.		63
78	Interactive effects of interspecific competition and microhabitat on early post-settlement survival in a coral reef fish. <i>Coral Reefs</i> , 2009, 28, 265-274.	0.9	62
79	Contrasting effects of habitat loss and fragmentation on coral-associated reef fishes. <i>Ecology</i> , 2011, 92, 1503-1512.	1.5	62
80	Increasing suspended sediment reduces foraging, growth and condition of a planktivorous damselfish. <i>Journal of Experimental Marine Biology and Ecology</i> , 2012, 428, 43-48.	0.7	62
81	Coral degradation and the structure of tropical reef fish communities. <i>Marine Ecology - Progress Series</i> , 2007, 333, 243-248.	0.9	61
82	Rising CO2 concentrations affect settlement behaviour of larval damselfishes. <i>Coral Reefs</i> , 2012, 31, 229-238.	0.9	60
83	Growth and Reproduction in the Protogynous Hermaphrodite <i>Pseudolabrus celidotus</i> (Pisces:) Tj ETQq1 1 0.784314 rgBT /Overlock 107 1.4 59		59
84	Interactions between herbivorous fish guilds and their influence on algal succession on a coastal coral reef. <i>Journal of Experimental Marine Biology and Ecology</i> , 2011, 399, 60-67.	0.7	59
85	Social induction of maturation and sex determination in a coral reef fish. <i>Proceedings of the Royal Society B: Biological Sciences</i> , 2004, 271, 2109-2114.	1.2	57
86	Coral reef mesopredators switch prey, shortening food chains, in response to habitat degradation. <i>Ecology and Evolution</i> , 2017, 7, 2626-2635.	0.8	57
87	Assessing the performance of artificial reefs as substitute habitat for temperate reef fishes: Implications for reef design and placement. <i>Science of the Total Environment</i> , 2019, 668, 139-152.	3.9	57
88	Extended breeding and recruitment periods of fishes on a low latitude coral reef. <i>Coral Reefs</i> , 2006, 25, 673-682.	0.9	56
89	A connectivity portfolio effect stabilizes marine reserve performance. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2020, 117, 25595-25600.	3.3	55
90	Use of implant microtags for studies on populations of small reef fish. <i>Marine Ecology - Progress Series</i> , 1995, 125, 61-66.	0.9	54

#	ARTICLE	IF	CITATIONS
91	Phylogeography of colour polymorphism in the coral reef fish <i>Pseudochromis fuscus</i> , from Papua New Guinea and the Great Barrier Reef. <i>Coral Reefs</i> , 2005, 24, 392-402.	0.9	53
92	Rarity and extinction risk in coral reef angelfishes on isolated islands: interrelationships among abundance, geographic range size and specialisation. <i>Coral Reefs</i> , 2010, 29, 1-11.	0.9	53
93	Patterns and persistence of larval retention and connectivity in a marine fish metapopulation. <i>Molecular Ecology</i> , 2012, 21, 4695-4705.	2.0	51
94	Suspended sediment impairs habitat choice and chemosensory discrimination in two coral reef fishes. <i>Coral Reefs</i> , 2011, 30, 879-887.	0.9	49
95	Critical research needs for managing coral reef marine protected areas: Perspectives of academics and managers. <i>Journal of Environmental Management</i> , 2013, 114, 84-91.	3.8	49
96	Monogamy when there is potential for polygyny: tests of multiple hypotheses in a group-living fish. <i>Behavioral Ecology</i> , 2008, 19, 353-361.	1.0	48
97	The Prevalence and Importance of Competition Among Coral Reef Fishes. <i>Annual Review of Ecology, Evolution, and Systematics</i> , 2015, 46, 169-190.	3.8	48
98	Prey selection by an obligate coral-feeding wrasse and its response to small-scale disturbance. <i>Marine Ecology - Progress Series</i> , 1997, 155, 189-198.	0.9	48
99	Resource use and impact of three herbivorous damselfishes on coral reef communities. <i>Marine Ecology - Progress Series</i> , 2006, 328, 215-224.	0.9	48
100	Interactions between herbivorous fishes and macro-algae on a temperate rocky reef. <i>Journal of Experimental Marine Biology and Ecology</i> , 1992, 159, 217-235.	0.7	47
101	Sediment-induced turbidity impairs foraging performance and prey choice of planktivorous coral reef fishes. <i>Ecological Applications</i> , 2013, 23, 1504-1517.	1.8	47
102	Habitat preference in newly settled coral trout ( <i>Plectropomus leopardus</i> , Serranidae). <i>Coral Reefs</i> , 1997, 16, 117-126.	0.9	46
103	Coral Bleaching and Consequences for Motile Reef Organisms: Past, Present and Uncertain Future Effects. <i>Ecological Studies</i> , 2009, , 139-158.	0.4	46
104	Population ecology of the temperate reef fish <i>Pseudolabrus celidotus</i> Bloch & Schneider (Pisces: Tj ETQq0 0 0 rgBT /Overlock 10 Tf 50 2 1984, 75, 277-303.	0.7	45
105	Marine Dispersal Scales Are Congruent over Evolutionary and Ecological Time. <i>Current Biology</i> , 2017, 27, 149-154.	1.8	45
106	Habitat patch size and mating system as determinants of social group size in coral-dwelling fishes. <i>Coral Reefs</i> , 2007, 26, 165-174.	0.9	43
107	Ecological mechanisms for coexistence of colour polymorphism in a coral-reef fish: an experimental evaluation. <i>Oecologia</i> , 2003, 137, 519-526.	0.9	42
108	Depth, bay position and habitat structure as determinants of coral reef fish distributions: Are deep reefs a potential refuge?. <i>Marine Ecology - Progress Series</i> , 2016, 561, 217-231.	0.9	42
