NOBUAKI KUBO

| #  | Article                                                                                                                                                                                  | IF   | CITATIONS |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 1  | Protecting GNSS Receivers From Jamming and Interference. Proceedings of the IEEE, 2016, 104, 1327-1338.                                                                                  | 21.3 | 123       |
| 2  | Multiple Faulty GNSS Measurement Exclusion Based on Consistency Check in Urban Canyons. IEEE<br>Sensors Journal, 2017, 17, 1909-1917.                                                    | 4.7  | 85        |
| 3  | Multipath mitigation and NLOS detection using vector tracking in urban environments. GPS Solutions, 2015, 19, 249-262.                                                                   | 4.3  | 84        |
| 4  | Maintaining real-time precise point positioning during outages of orbit and clock corrections. GPS Solutions, 2017, 21, 937-947.                                                         | 4.3  | 82        |
| 5  | Integrity monitoring for Positioning of intelligent transport systems using integrated RTK NSS, IMU<br>and vehicle odometer. IET Intelligent Transport Systems, 2018, 12, 901-908.       | 3.0  | 47        |
| 6  | Initial Positioning Assessment of BDS New Satellites and New Signals. Remote Sensing, 2019, 11, 1320.                                                                                    | 4.0  | 41        |
| 7  | Integrity monitoring of vehicle positioning in urban environment using RTK-GNSS, IMU and speedometer. Measurement Science and Technology, 2017, 28, 055102.                              | 2.6  | 38        |
| 8  | Linear time-series modeling of the GNSS based TEC variations over Southwest Japan during 2011–2018<br>and comparison against ARMA and GIM models. Acta Astronautica, 2019, 165, 248-258. | 3.2  | 32        |
| 9  | Performance evaluation of GPS augmentation using quasi-zenith satellite system. IEEE Transactions on<br>Aerospace and Electronic Systems, 2004, 40, 1249-1261.                           | 4.7  | 30        |
| 10 | Advantage of velocity measurements on instantaneous RTK positioning. GPS Solutions, 2009, 13, 271-280.                                                                                   | 4.3  | 28        |
| 11 | GNSS Multipath Detection Using Continuous Time-Series C/NO. Sensors, 2020, 20, 4059.                                                                                                     | 3.8  | 25        |
| 12 | Apparent clock and TGD biases between BDS-2 and BDS-3. GPS Solutions, 2020, 24, 1.                                                                                                       | 4.3  | 22        |
| 13 | Performance analysis of GPS augmentation using Japanese Quasi-Zenith Satellite System. Earth, Planets<br>and Space, 2004, 56, 25-37.                                                     | 2.5  | 20        |
| 14 | Mixed GPS–BeiDou RTK with inter-systems bias estimation aided by CSAC. GPS Solutions, 2018, 22, 1.                                                                                       | 4.3  | 20        |
| 15 | Improvement of Dead Reckoning in Urban Areas Through Integration of Low-Cost Multisensors. IEEE<br>Transactions on Intelligent Vehicles, 2017, 2, 278-287.                               | 12.7 | 15        |
| 16 | Autonomous Navigation of a Mobile Robot Based on GNSS/DR Integration in Outdoor Environments.<br>Journal of Robotics and Mechatronics, 2014, 26, 214-224.                                | 1.0  | 15        |
| 17 | Calibration and analysis of BDS receiver-dependent code biases. Journal of Geodesy, 2021, 95, 1.                                                                                         | 3.6  | 12        |
| 18 | Performance Evaluation of IMU and DVL Integration in Marine Navigation. Sensors, 2021, 21, 1056.                                                                                         | 3.8  | 11        |

| #  | Article                                                                                                                                                                                                                                    | IF  | CITATIONS |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 19 | Performance Improvement of RTK-GNSS with IMU and Vehicle Speed Sensors in an Urban Environment.<br>IEICE Transactions on Fundamentals of Electronics, Communications and Computer Sciences, 2016,<br>E99.A, 217-224.                       | 0.3 | 11        |
| 20 | Vehicle Teleoperation Using 3D Maps and GPS Time Synchronization. IEEE Computer Graphics and Applications, 2013, 33, 82-88.                                                                                                                | 1.2 | 9         |
| 21 | Efficient Satellite Selection Method for Instantaneous RTK-GNSS in Challenging Environments.<br>Transactions of the Japan Society for Aeronautical and Space Sciences, 2017, 60, 221-229.                                                  | 0.7 | 9         |
| 22 | Contribution of QZSS with four satellites to multi-GNSS long baseline RTK. Journal of Spatial Science, 2020, 65, 41-60.                                                                                                                    | 1.5 | 8         |
| 23 | Cooperative relative positioning for intelligent transportation system. , 2012, , .                                                                                                                                                        |     | 6         |
| 24 | Cooperative Relative Positioning for Intelligent Transportation System. International Journal of Intelligent Transportation Systems Research, 2015, 13, 131-142.                                                                           | 1.1 | 6         |
| 25 | Evaluation of the Pseudorange Performance by Using Software GPS Receiver. The Journal of Global Positioning Systems, 2005, 4, 215-222.                                                                                                     | 1.6 | 6         |
| 26 | GNSS NLOS Signal Classification Based on Machine Learning and Pseudorange Residual Check.<br>Frontiers in Robotics and Al, 2022, 9, .                                                                                                      | 3.2 | 6         |
| 27 | RTK-GPS Reliability Improvement in Dense Urban Areas. Journal of the Japan Society for Aeronautical and Space Sciences, 2012, 60, 40-47.                                                                                                   | 0.1 | 5         |
| 28 | Precise point positioning for mobile robots using software GNSS receiver and QZSS LEX signal. , 2013, , $\cdot$                                                                                                                            |     | 5         |
| 29 | Performance evaluation of GNSS-based railway applications. , 2015, , .                                                                                                                                                                     |     | 4         |
| 30 | Initial performance evaluation of centimeterâ€class augmentation system using Quasiâ€Zenith Satellite<br>System. Electronics and Communications in Japan, 2018, 101, 3-10.                                                                 | 0.5 | 4         |
| 31 | Integral GPS and QZSS Ambiguity Resolution. Transactions of the Japan Society for Aeronautical and Space Sciences, 2004, 47, 38-43.                                                                                                        | 0.7 | 4         |
| 32 | Performance Evaluation and A New Disaster Prevention System of Precise Point Positioning at Sea. , 0, ,                                                                                                                                    |     | 4         |
| 33 | Prediction of RTK-GNSS Performance in Urban Environments Using a 3D model and Continuous LoS<br>Method. , 0, , .                                                                                                                           |     | 4         |
| 34 | Positioning Simulation Using a 3D Map and Verification of Positional Estimation Accuracy in Urban<br>Areas Using Actual Measurement. SAE International Journal of Passenger Cars - Electronic and<br>Electrical Systems, 2016, 9, 171-179. | 0.3 | 3         |
| 35 | Performance Evaluation of Centimeter-Level Augmentation Positioning L6-CLAS/MADOCA at the Beginning of Official Operation of QZSS. IEEJ Journal of Industry Applications, 2021, 10, 27-35.                                                 | 1.1 | 3         |
| 36 | <b>Satellite Based Train Positioning Using Three-dimensional Track Maps</b> . Quarterly Report of RTRI<br>(Railway Technical Research Institute) (Japan), 2015, 56, 194-199.                                                               | 0.4 | 3         |

|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 37 | Verification of GNSS multipath and positioning in urban areas using 3D maps. IEICE Communications Express, 2020, 9, 529-534.                                                                           | 0.4 | 3         |
| 38 | Real-time monitoring for structure deformations using hand-held RTK-GNSS receivers on the wall. , 2017, , .                                                                                            |     | 2         |
| 39 | An Improved Method for BDS Inter-frequency Clock Bias Estimation. Lecture Notes in Electrical Engineering, 2019, , 39-48.                                                                              | 0.4 | 2         |
| 40 | Reliable Positioning and Journey Planning for Intelligent Transport Systems. , 2020, , .                                                                                                               |     | 2         |
| 41 | Achievement of Continuous Decimeter-Level Accuracy Using Low-Cost Single-Frequency Receivers in<br>Urban Environments. , 0, , .                                                                        |     | 2         |
| 42 | Prediction of Fixing of RTK-GNSS Positioning in Multipath Environment Using Radiowave Propagation Simulation. Journal of the Institute of Positioning Navigation and Timing of Japan, 2019, 10, 13-22. | 0.2 | 2         |
| 43 | Performance Evaluation and Future Application of Real-Time PPP Product in Japan. , O, , .                                                                                                              |     | 2         |
| 44 | Real-Time Monitoring of Structure Movements Using Low-Cost, Wall-Mounted, Hand-held RTK-GNSS Receivers. , 0, , .                                                                                       |     | 2         |
| 45 | Development of a Prototyping Platform for Software GPS Receiver. The Journal of Japan Institute of<br>Navigation, 2004, 111, 193-200.                                                                  | 0.1 | 1         |
| 46 | Experimental Evaluation of Cooperative Relative Positioning for Intelligent Transportation System.<br>International Journal of Navigation and Observation, 2014, 2014, 1-12.                           | 0.8 | 1         |
| 47 | Performance evaluation of the 3D MAP based precise positioning and its application. , 2018, , .                                                                                                        |     | 1         |
| 48 | Comparative evaluation on IMES and the other positioning systems for navigation performance in a ship. Electronics and Communications in Japan, 2019, 102, 36-47.                                      | 0.5 | 1         |
| 49 | Benefits of Adaptive Kalman Filter-Based Single Point Positioning in Dense Urban Environments. , 0, , .                                                                                                |     | 1         |
| 50 | Initial Assessment of Medium-Baseline Single-Epoch RTK Using GPS/BeiDou/QZSS. IEICE Transactions on Communications, 2014, E97.B, 1195-1204.                                                            | 0.7 | 1         |
| 51 | Initial Performance Evaluation of cm-class Augmentation System using Quasi-Zenith Satellite System.<br>IEEJ Transactions on Industry Applications, 2018, 138, 173-179.                                 | 0.2 | 1         |
| 52 | DS-SS modulated extremely weak power radio communications system synchronized by a GPS receiver PPS signal. Electronics and Communications in Japan, 2007, 90, 39-50.                                  | 0.1 | 0         |
| 53 | Evaluation of GPS Dual Frequency Application Using L2 Civilian Signal. Transactions of the Japan<br>Society for Aeronautical and Space Sciences, 2008, 51, 101-106.                                    | 0.7 | 0         |
|    |                                                                                                                                                                                                        |     |           |

54 Integrity Monitoring for Advanced Driver Assistance Systems. , 0, , .

|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 55 | Effect of Inter-system Biases Estimation for Mixed GPS-BeiDou on Ambiguity Resolution. , 0, , .                                                                                       |     | 0         |
| 56 | Visual Odometry with Dynamic Object Detection by Complementary Integration of Optical Flows and Pattern Recognition. , 0, , .                                                         |     | 0         |
| 57 | Development of Indoor Positioning System using IMES for Smart Phone. IEEJ Transactions on Electronics, Information and Systems, 2018, 138, 193-203.                                   | 0.2 | 0         |
| 58 | Comparative Evaluation on IMES and the Other Positioning Systems for Navigation Performance in a Ship. IEEJ Transactions on Electronics, Information and Systems, 2019, 139, 543-553. | 0.2 | 0         |
| 59 | Improved Integration Method of Wide-area RTK/PPP with IMU and Odometer. , 0, , .                                                                                                      |     | 0         |
