#	ARTICLE	IF	CITATIONS
1	Multiple Sclerosis Data Alliance – A global multi-stakeholder collaboration to scale-up real world data research. <i>Multiple Sclerosis and Related Disorders</i> , 2021, 47, 102634.	2.0	11
2	Associations of Disease-Modifying Therapies With COVID-19 Severity in Multiple Sclerosis. <i>Neurology</i> , 2021, 97, e1870-e1885.	1.1	168
3	Systematic evaluation of NIPT aneuploidy detection software tools with clinically validated NIPT samples. <i>PLoS Computational Biology</i> , 2021, 17, e1009684.	3.2	6
4	pBRIT: gene prioritization by correlating functional and phenotypic annotations through integrative data fusion. <i>Bioinformatics</i> , 2018, 34, 2254-2262.	4.1	24
5	Towards practical privacy-preserving genome-wide association study. <i>BMC Bioinformatics</i> , 2018, 19, 537.	2.6	32
6	Candidate gene prioritization with Endeavour. <i>Nucleic Acids Research</i> , 2016, 44, W117-W121.	14.5	111
7	<i>Beegle</i> : from literature mining to disease-gene discovery. <i>Nucleic Acids Research</i> , 2016, 44, e18-e18.	14.5	30
8	Galahad: a web server for drug effect analysis from gene expression. <i>Nucleic Acids Research</i> , 2015, 43, W208-W212.	14.5	8
9	NGS-Logistics: federated analysis of NGS sequence variants across multiple locations. <i>Genome Medicine</i> , 2014, 6, 71.	8.2	16
10	Effective diagnosis of genetic disease by computational phenotype analysis of the disease-associated genome. <i>Science Translational Medicine</i> , 2014, 6, 252ra123.	12.4	223
11	NGS-Logistics : Federated analysis of NGS sequence variants across multiple locations. <i>Genome Medicine</i> , 2014, 6, 71.	8.2	13
12	eXtasy: variant prioritization by genomic data fusion. <i>Nature Methods</i> , 2013, 10, 1083-1084.	19.0	153
