#	ARTICLE	IF	CITATIONS
1	Intrinsic alignments of the extended radio continuum emission of galaxies in the EAGLE simulations. Monthly Notices of the Royal Astronomical Society, 2022, 511, 3844-3862.	4.4	2
2	The physics governing the upper truncation mass of the globular cluster mass function. Monthly Notices of the Royal Astronomical Society, 2022, 510, 6190-6200.	4.4	4
3	Radial distributions of globular clusters trace their host dark matter halo: insights from the E-MOSAICS simulations. Monthly Notices of the Royal Astronomical Society, 2022, 513, 3925-3945.	4.4	13
4	Galaxy mergers can initiate quenching by unlocking an AGN-driven transformation of the baryon cycle. Monthly Notices of the Royal Astronomical Society, 2022, 515, 1430-1443.	4.4	14
5	What to expect when using globular clusters as tracers of the total mass distribution in Milky Way-mass galaxies. Monthly Notices of the Royal Astronomical Society, 2021, 502, 2828-2844.	4.4	6
6	The kinematics of globular cluster populations in the E-MOSAICS simulations and their implications for the assembly history of the Milky Way. Monthly Notices of the Royal Astronomical Society, 2021, 503, 31-58.	4.4	22
7	The morphology of star-forming gas and its alignment with galaxies and dark matter haloes in the EAGLE simulations. Monthly Notices of the Royal Astronomical Society, 2021, 505, 65-87.	4.4	5
8	The survival of globular clusters in a cuspy Fornax. Monthly Notices of the Royal Astronomical Society, 2021, 507, 2339-2353.	4.4	13
9	Metal-enriched halo gas across galaxy overdensities over the last 10 billion years. Monthly Notices of the Royal Astronomical Society, 2021, 508, 4573-4599.	4.4	30
10	The quenching and morphological evolution of central galaxies is facilitated by the feedback-driven expulsion of circumgalactic gas. Monthly Notices of the Royal Astronomical Society, 2020, 491, 4462-4480.	4.4	94
11	WALLABY – an SKA Pathfinder H&#i%oi survey. Astrophysics and Space Science, 2020, 365, 1.	1.4	128
12	The lensing properties of subhaloes in massive elliptical galaxies in sterile neutrino cosmologies. Monthly Notices of the Royal Astronomical Society, 2020, 491, 1295-1310.	4.4	13
13	The <sc>artemis</sc> simulations: stellar haloes of Milky Way-mass galaxies. Monthly Notices of the Royal Astronomical Society, 2020, 498, 1765-1785.	4.4	60
14	Predicting accreted satellite galaxy masses and accretion redshifts based on globular cluster orbits in the E-MOSAICS simulations. Monthly Notices of the Royal Astronomical Society, 2020, 499, 4863-4875.	4.4	25
15	Quasar Sightline and Galaxy Evolution (QSAGE) survey – II. Galaxy overdensities around UV luminous quasars at $z \sim 2$. Monthly Notices of the Royal Astronomical Society, 2020, 497, 3083-3096.	4.4	11
16	Kraken reveals itself – the merger history of the Milky Way reconstructed with the E-MOSAICS simulations. Monthly Notices of the Royal Astronomical Society, 2020, 498, 2472-2491.	4.4	147
17	Galactic outflow rates in the EAGLE simulations. Monthly Notices of the Royal Astronomical Society, 2020, 494, 3971-3997.	4.4	73
18	An EAGLE’s view of ex situ galaxy growth. Monthly Notices of the Royal Astronomical Society, 2020, 497, 81-93.	4.4	45

#	ARTICLE	IF	CITATIONS
19	Galaxy cold gas contents in modern cosmological hydrodynamic simulations. Monthly Notices of the Royal Astronomical Society, 2020, 497, 146-166.	4.4	71
20	The globular cluster system mass-halo mass relation in the E-MOSAICS simulations. Monthly Notices of the Royal Astronomical Society, 2020, 498, 1050-1061.	4.4	33
21	EAGLE and Illustris-TNG Predictions for Resolved eROSITA X-Ray Observations of the Circumgalactic Medium around Normal Galaxies. Astrophysical Journal Letters, 2020, 893, L24.	8.3	35
22	Where did the globular clusters of the Milky Way form? Insights from the E-MOSAICS simulations. Monthly Notices of the Royal Astronomical Society, 2020, 495, 4248-4267.	4.4	27
23	The mass fraction of halo stars contributed by the disruption of globular clusters in the E-MOSAICS simulations. Monthly Notices of the Royal Astronomical Society, 2020, 493, 3422-3428.	4.4	21
24	Feedback from supermassive black holes transforms centrals into passive galaxies by ejecting circumgalactic gas. Monthly Notices of the Royal Astronomical Society, 2020, 491, 2939-2952.	4.4	51
25	The bahamas project: effects of a running scalar spectral index on large-scale structure. Monthly Notices of the Royal Astronomical Society, 2020, 493, 676-697.	4.4	11
26	The $[\alpha/\text{Fe}]$ - $[\text{Fe}/\text{H}]$ relation in the E-MOSAICS simulations: its connection to the birth place of globular clusters and the fraction of globular cluster field stars in the bulge. Monthly Notices of the Royal Astronomical Society, 2020, 491, 4012-4022.	4.4	28
27	The changing circumgalactic medium over the last 10 Gyr I. Physical and dynamical properties. Monthly Notices of the Royal Astronomical Society, 2020, 500, 1476-1490.	4.4	9
28	Linking globular cluster formation at low and high redshift through the age-metallicity relation in E-MOSAICS. Monthly Notices of the Royal Astronomical Society, 2020, 500, 4768-4778.	4.4	13
29	Quenching and morphological evolution due to circumgalactic gas expulsion in a simulated galaxy with a controlled assembly history. Monthly Notices of the Royal Astronomical Society, 2020, 501, 236-253.	4.4	18
30	The evolution of the UV luminosity function of globular clusters in the E-MOSAICS simulations. Monthly Notices of the Royal Astronomical Society, 2019, 487, 4550-4564.	4.4	15
31	Young star cluster populations in the E-MOSAICS simulations. Monthly Notices of the Royal Astronomical Society, 2019, 490, 1714-1733.	4.4	31
32	Evolution of the cold gas properties of simulated post-starburst galaxies. Monthly Notices of the Royal Astronomical Society, 2019, 484, 2447-2461.	4.4	28
33	The abundance and physical properties of O VII and O VIII X-ray absorption systems in the EAGLE simulations. Monthly Notices of the Royal Astronomical Society, 2019, 488, 2947-2969.	4.4	33
34	The nature of submillimetre and highly star-forming galaxies in the EAGLE simulation. Monthly Notices of the Royal Astronomical Society, 2019, 488, 2440-2454.	4.4	50
35	Formation histories of stars, clusters, and globular clusters in the E-MOSAICS simulations. Monthly Notices of the Royal Astronomical Society, 2019, 486, 5838-5852.	4.4	56
36	The signal of decaying dark matter with hydrodynamical simulations. Monthly Notices of the Royal Astronomical Society, 2019, 485, 4071-4089.	4.4	9

#	ARTICLE	IF	CITATIONS
37	The E-MOSAICS project: tracing galaxy formation and assembly with the age-metallicity distribution of globular clusters. <i>Monthly Notices of the Royal Astronomical Society</i> , 2019, 486, 3134-3179.	4.4	95
38	The gas fractions of dark matter haloes hosting simulated λ CDM galaxies are governed by the feedback history of their black holes. <i>Monthly Notices of the Royal Astronomical Society</i> , 2019, 485, 3783-3793.	4.4	66
39	Calibrated, cosmological hydrodynamical simulations with variable IMFs III: spatially resolved properties and evolution. <i>Monthly Notices of the Royal Astronomical Society</i> , 2019, 483, 985-1002.	4.4	13
40	Quasar Sightline and Galaxy Evolution (QSAGE) survey â€“ I. The galaxy environment of OÂvi absorbers up to $z=1.4$ around PKS 0232âˆ’04. <i>Monthly Notices of the Royal Astronomical Society</i> , 2019, 486, 21-41.	4.4	26
41	The diverse evolutionary pathways of post-starburst galaxies. <i>Nature Astronomy</i> , 2019, 3, 440-446.	10.1	26
42	The relationship between the morphology and kinematics of galaxies and its dependence on dark matter halo structure in EAGLE. <i>Monthly Notices of the Royal Astronomical Society</i> , 2019, 485, 972-987.	4.4	59
43	The oxygen abundance gradients in the gas discs of galaxies in the EAGLE simulation. <i>Monthly Notices of the Royal Astronomical Society</i> , 2019, 482, 2208-2221.	4.4	49
44	Fossil stellar streams and their globular cluster populations in the E-MOSAICS simulations. <i>Monthly Notices of the Royal Astronomical Society</i> , 2019, 482, 2795-2806.	4.4	35
45	The evolution of the baryon fraction in haloes as a cause of scatter in the galaxy stellar mass in the <code>eagle</code> simulation. <i>Monthly Notices of the Royal Astronomical Society</i> , 2019, 482, 3261-3273.	4.4	13
46	Galaxies with monstrous black holes in galaxy cluster environments. <i>Monthly Notices of the Royal Astronomical Society</i> , 2019, 485, 396-407.	4.4	14
47	The building blocks of the Milky Way halo using APOGEE and Gaia or Is the Galaxy a typical galaxy?. <i>Proceedings of the International Astronomical Union</i> , 2019, 14, 170-173.	0.0	3
48	Calibrated, cosmological hydrodynamical simulations with variable IMFs â€“ II. Correlations between the IMF and global galaxy properties. <i>Monthly Notices of the Royal Astronomical Society</i> , 2019, 482, 2515-2529.	4.4	9
49	The formation and assembly history of the Milky Way revealed by its globular cluster population. <i>Monthly Notices of the Royal Astronomical Society</i> , 2019, 486, 3180-3202.	4.4	232
50	The formation of hot gaseous haloes around galaxies. <i>Monthly Notices of the Royal Astronomical Society</i> , 2018, 473, 538-559.	4.4	44
51	The impact of dark energy on galaxy formation. What does the future of our Universe hold?. <i>Monthly Notices of the Royal Astronomical Society</i> , 2018, 477, 3744-3759.	4.4	10
52	The diverse density profiles of galaxy clusters with self-interacting dark matter plus baryons. <i>Monthly Notices of the Royal Astronomical Society: Letters</i> , 2018, 476, L20-L24.	3.3	62
53	Baryon Budget of the Hot Circumgalactic Medium of Massive Spiral Galaxies. <i>Astrophysical Journal Letters</i> , 2018, 855, L24.	8.3	40
54	The SAMI Galaxy Survey: understanding observations of large-scale outflows at low redshift with EAGLE simulations. <i>Monthly Notices of the Royal Astronomical Society</i> , 2018, 473, 380-397.	4.4	9

#	ARTICLE	IF	CITATIONS
55	The origin of the “blue tilt” of globular cluster populations in the E-MOSAICS simulations. Monthly Notices of the Royal Astronomical Society, 2018, 480, 3279-3301.	4.4	33
56	The multiphase circumgalactic medium traced by low metal ions in EAGLE zoom simulations. Monthly Notices of the Royal Astronomical Society, 2018, 481, 835-859.	4.4	64
57	The rapid growth phase of supermassive black holes. Monthly Notices of the Royal Astronomical Society, 2018, 481, 3118-3128.	4.4	58
58	Dynamical cluster disruption and its implications for multiple population models in the E-MOSAICS simulations. Monthly Notices of the Royal Astronomical Society, 2018, 481, 2851-2857.	4.4	36
59	The origin of diverse α -element abundances in galaxy discs. Monthly Notices of the Royal Astronomical Society, 2018, 477, 5072-5089.	4.4	77
60	Tidal dwarf galaxies in cosmological simulations. Monthly Notices of the Royal Astronomical Society, 2018, 474, 580-596.	4.4	38
61	Globular cluster formation and evolution in the context of cosmological galaxy assembly: open questions. Proceedings of the Royal Society A: Mathematical, Physical and Engineering Sciences, 2018, 474, 20170616.	2.1	102
62	The Cluster-EAGLE project: velocity bias and the velocity dispersion–mass relation of cluster galaxies. Monthly Notices of the Royal Astronomical Society, 2018, 474, 3746-3759.	4.4	33
63	Data Release of UV to Submillimeter Broadband Fluxes for Simulated Galaxies from the EAGLE Project. Astrophysical Journal, Supplement Series, 2018, 234, 20.	7.7	60
64	Galaxy formation efficiency and the multiverse explanation of the cosmological constant with EAGLE simulations. Monthly Notices of the Royal Astronomical Society, 2018, 477, 3727-3743.	4.4	14
65	SEAGLE I. A pipeline for simulating and modelling strong lenses from cosmological hydrodynamic simulations. Monthly Notices of the Royal Astronomical Society, 2018, 479, 4108-4125.	4.4	24
66	Flickering AGN can explain the strong circumgalactic α observed by COS-Halos. Monthly Notices of the Royal Astronomical Society, 2018, 474, 4740-4755.	4.4	72
67	The E-MOSAICS project: simulating the formation and co-evolution of galaxies and their star cluster populations. Monthly Notices of the Royal Astronomical Society, 2018, 475, 4309-4346.	4.4	173
68	The properties of “dark” Λ CDM haloes in the Local Group. Monthly Notices of the Royal Astronomical Society, 2017, 465, 3913-3926.	4.4	44
69	The EAGLE simulations: atomic hydrogen associated with galaxies. Monthly Notices of the Royal Astronomical Society, 2017, 464, 4204-4226.	4.4	130
70	Size matters: abundance matching, galaxy sizes, and the Tully–Fisher relation in EAGLE. Monthly Notices of the Royal Astronomical Society, 2017, 464, 4736-4746.	4.4	43
71	Mass-Discrepancy Acceleration Relation: A Natural Outcome of Galaxy Formation in Cold Dark Matter Halos. Physical Review Letters, 2017, 118, 161103.	7.8	95
72	The Diversity of Assembly Histories Leading to Disc Galaxy Formation in a Λ CDM Model. Publications of the Astronomical Society of Australia, 2017, 34, .	3.4	15

#	ARTICLE	IF	CITATIONS
73	Winds of change: reionization by starburst galaxies. Monthly Notices of the Royal Astronomical Society, 2017, 468, 2176-2188.	4.4	34
74	The dark nemesis of galaxy formation: why hot haloes trigger black hole growth and bring star formation to an end. Monthly Notices of the Royal Astronomical Society, 2017, 465, 32-44.	4.4	214
75	The low-mass end of the baryonic Tully-Fisher relation. Monthly Notices of the Royal Astronomical Society, 2017, 464, 2419-2428.	4.4	69
76	The environmental dependence of gas accretion on to galaxies: quenching satellites through starvation. Monthly Notices of the Royal Astronomical Society, 2017, 466, 3460-3471.	4.4	54
77	Optical colours and spectral indices of $z \approx 0.1$ eagle galaxies with the 3D dust radiative transfer code skirt. Monthly Notices of the Royal Astronomical Society, 2017, 470, 771-799.	4.4	152
78	Properties of Local Group galaxies in hydrodynamical simulations of sterile neutrino dark matter cosmologies. Monthly Notices of the Royal Astronomical Society, 2017, 468, 4285-4298.	4.4	50
79	The Hydrangea simulations: galaxy formation in and around massive clusters. Monthly Notices of the Royal Astronomical Society, 2017, 470, 4186-4208.	4.4	167
80	A comparison of observed and simulated absorption from $H\alpha$, $C\alpha$, and $Si\text{IV}$ around $z \approx 2$ star-forming galaxies suggests redshift space distortions are due to inflows. Monthly Notices of the Royal Astronomical Society, 2017, 471, 690-705.	4.4	62
81	On the galaxy-halo connection in the EAGLE simulation. Monthly Notices of the Royal Astronomical Society: Letters, 2017, 471, L11-L15.	3.3	29
82	The relation between galaxy morphology and colour in the EAGLE simulation. Monthly Notices of the Royal Astronomical Society: Letters, 2017, 472, L45-L49.	3.3	71
83	Size evolution of normal and compact galaxies in the EAGLE simulation. Monthly Notices of the Royal Astronomical Society, 2017, 465, 722-738.	4.4	170
84	The origin of scatter in the stellar mass-halo mass relation of central galaxies in the EAGLE simulation. Monthly Notices of the Royal Astronomical Society, 2017, 465, 2381-2396.	4.4	100
85	The link between galaxy and black hole growth in the eagle simulation. Monthly Notices of the Royal Astronomical Society, 2017, 468, 3395-3407.	4.4	79
86	The Cluster-EAGLE project: global properties of simulated clusters with resolved galaxies. Monthly Notices of the Royal Astronomical Society, 2017, 471, 1088-1106.	4.4	178
87	Barred galaxies in the EAGLE cosmological hydrodynamical simulation. Monthly Notices of the Royal Astronomical Society, 2017, 469, 1054-1064.	4.4	66
88	The origin of the enhanced metallicity of satellite galaxies. Monthly Notices of the Royal Astronomical Society, 2017, 464, 508-529.	4.4	36
89	A chronicle of galaxy mass assembly in the EAGLE simulation. Monthly Notices of the Royal Astronomical Society, 2017, 464, 1659-1675.	4.4	145
90	The oldest and most metal-poor stars in the APOSTLE Local Group simulations. Monthly Notices of the Royal Astronomical Society, 2017, 465, 2212-2224.	4.4	67

#	ARTICLE	IF	CITATIONS
91	The Circum-Galactic Medium of Massive Spirals. II. Probing the Nature of Hot Gaseous Halo around the Most Massive Isolated Spiral Galaxies. <i>Astrophysical Journal, Supplement Series</i> , 2017, 233, 20.	7.7	52
92	BEING WISE II: REDUCING THE INFLUENCE OF STAR FORMATION HISTORY ON THE MASS-TO-LIGHT RATIO OF QUIESCENT GALAXIES. <i>Astrophysical Journal</i> , 2016, 832, 198.	4.5	19
93	The origin of the \hat{L} -enhancement of massive galaxies. <i>Monthly Notices of the Royal Astronomical Society: Letters</i> , 2016, 461, L102-L106.	3.3	44
94	Predictions of hydrodynamic simulations for direct dark matter detection. <i>Journal of Physics: Conference Series</i> , 2016, 718, 042007.	0.4	1
95	The Fermi GeV excess: challenges for the dark matter interpretation. <i>Journal of Physics: Conference Series</i> , 2016, 718, 042010.	0.4	1
96	Simulated Milky Way analogues: implications for dark matter direct searches. <i>Journal of Cosmology and Astroparticle Physics</i> , 2016, 2016, 024-024.	5.4	74
97	The apostle project: Local Group kinematic mass constraints and simulation candidate selection. <i>Monthly Notices of the Royal Astronomical Society</i> , 2016, 457, 844-856.	4.4	154
98	The Fundamental Plane of star formation in galaxies revealed by the EAGLE hydrodynamical simulations. <i>Monthly Notices of the Royal Astronomical Society</i> , 2016, 459, 2632-2650.	4.4	84
99	Music from the heavens – gravitational waves from supermassive black hole mergers in the EAGLE simulations. <i>Monthly Notices of the Royal Astronomical Society</i> , 2016, 463, 870-885.	4.4	44
100	Observations of metals in the $z < 3.5$ intergalactic medium and comparison to the EAGLE simulations. <i>Monthly Notices of the Royal Astronomical Society</i> , 2016, 462, 2440-2464.	4.4	30
101	Galaxies in the EAGLE hydrodynamical simulation and in the Durham and Munich semi-analytical models. <i>Monthly Notices of the Royal Astronomical Society</i> , 2016, 461, 3457-3482.	4.4	85
102	The environmental dependence of $H\alpha$ in galaxies in the eagle simulations. <i>Monthly Notices of the Royal Astronomical Society</i> , 2016, 461, 2630-2649.	4.4	77
103	Recycled stellar ejecta as fuel for star formation and implications for the origin of the galaxy mass-metallicity relation. <i>Monthly Notices of the Royal Astronomical Society</i> , 2016, 456, 1235-1258.	4.4	38
104	The chosen few: the low-mass haloes that host faint galaxies. <i>Monthly Notices of the Royal Astronomical Society</i> , 2016, 456, 85-97.	4.4	117
105	Bimodality of low-redshift circumgalactic $O\text{VI}$ in non-equilibrium eagle zoom simulations. <i>Monthly Notices of the Royal Astronomical Society</i> , 2016, 460, 2157-2179.	4.4	159
106	Subhalo abundance matching and assembly bias in the EAGLE simulation. <i>Monthly Notices of the Royal Astronomical Society</i> , 2016, 460, 3100-3118.	4.4	122
107	The APOSTLE simulations: solutions to the Local Group's cosmic puzzles. <i>Monthly Notices of the Royal Astronomical Society</i> , 2016, 457, 1931-1943.	4.4	453
108	Cosmic distribution of highly ionized metals and their physical conditions in the EAGLE simulations. <i>Monthly Notices of the Royal Astronomical Society</i> , 2016, 459, 310-332.	4.4	85
